PARTNERSHIP TO PROVIDE SKILLED MINING WORKERS

Site Group International Limited ("Site", ASX:SIT) and OceanaGold have committed to undertaking construction of an underground mining training centre at the Site Skills Training Clark Campus, Philippines. This facility will service Asia-Pacific and will be a unique resource to the Philippines.

At a function hosted by the Australian Ambassador Hon. Bill Tweddell in Manila, Site Group International CEO & Managing Director, Mr Vern Wills welcomed the initiative, "We applaud the vision of OceanaGold to support the creation of the Underground Mining Training Centre that will service the industry regionally and will meet a growing need in the marketplace".

"OceanaGold is a company that is focussed on development of their staff and working with the local community in building assets that benefit the community. Site Skills Training are pleased to be part of this growth for OceanaGold, Didipio and the Philippines."

OceanaGold CEO & Managing Director Mick Wilkes said, "OceanaGold's Didipio underground mine will begin development in 2015 and we will need workers skilled in underground mining. Our partnership with Site Skills Training will allow us to meet this need and create something for other underground miners in emerging economies to use. Working with the leading mining training company in the Philippines will ensure graduates meet our high standards for health and safety, trade and soft skills."

The Underground Mining Training Centre will add to the Clark Campus further enhancing its reputation as the premier mining training facility in Asia. "This Centre complements and grows our ability to fully service the mining industry with our new Heavy Vehicle Operator, Heavy Vehicle Mechanical, Fabrication and Welding, Electrical and HSSE Centres. We look forward to meeting the current and future needs of the mining industry and helping companies fully exploit their mineral environment," Mr Wills said.

"Furthermore, this project strengthens our great relationship with OceanaGold and validates the quality of the training programs and the return on investment for clients."

Additionally, Site and OceanaGold have reached an agreement with another leading Australian company, Mastermyne, who will provide guidance with the construction of the facility and input to the curriculum and training methodology.

Mastermyne CEO Tony Caruso stated, "Mastermyne subsidiary Mynesight has developed and built world leading facilities in Australia. It is an excellent outcome to see this utilised in Clark for the emerging economies.

Immersive Technologies will also supply its state of the art underground mining simulators allowing operators a safe environment to learn and practice their skills. Immersive Technologies is the world's largest supplier of mining equipment simulators.
