

24 April 2017

MARCH 2017 QUARTERLY ACTIVITIES REPORT

Aguia Resources Limited (ASX: **AGR**) (“Aguia” or “Company”) is pleased to report on its activities for the March 2017 Quarter:

- **Drilling during the Quarter continued to demonstrate the homogeneous nature and strong continuity of mineralisation both laterally and at depth with some intercepts thicker than anticipated**
- **Drilling intercepted a new carbonatite zone at surface and 100 metres from surface with potential to extend along strike by about 500 meters**
- **The new carbonatite zone has the potential to decrease the strip ratio and reduce overall mining costs as it outcrops within the planned pit limit**
- **Infill drill campaign extended to 14,000 metres – final 1,300 metres to be completed by the end of April**
- **100% of the original planned infill drilling now complete with additional drilling underway to delineate the newly discovered carbonatite zone**
- **Samples of fresh rock delivered to Eriez and the Pilot Plant Program now underway**
- **Três Estradas named a priority project by the Rio Grande do Sul State Government**
- **Aguia announced plans to pursue an application for a dual listing on the Toronto Venture Exchange (“TSXV”)**
- **Shareholders voted in favour of a 5-to-1 share consolidation at an Extraordinary General Meeting which will better position Aguia for a TSXV listing**

Highlights:

During the March 2017 Quarter (the “Quarter”), Aguia continued to focus on advancing the development of its Três Estradas phosphate asset located in the state of Rio Grande do Sul in Southern Brazil (Figure 1). In particular, the main activity for the Quarter was an ongoing infill drilling program to convert Inferred Resources to Measured and Indicated Resources to be used in the Bankable Feasibility Study (“BFS”). The results from this drill program to date have been better than expected and a new area of mineralization has been identified which has the potential to decrease the strip ratio and reduce overall mining costs. Also during the Quarter, the Company advanced plans to pursue a listing on the TSXV.

Infill Drilling Program

The infill drilling has returned grades and thicknesses predicted in Aguiá’s model for Três Estradas which achieves the program’s objective to convert Inferred Resources to the Measured and Indicated categories. The current program is demonstrating that the mineralised carbonatite is very consistent and continuous both along strike and at depth. Drill results reported during the Quarter, reveal that certain parts of the deposit are thicker than predicted in the previous resource model. Drilling sections 1250NE (Figure 1 below) and 600NE (Figure 2 below) are examples of the thicker mineralised intercepts relative to the previous resource model.

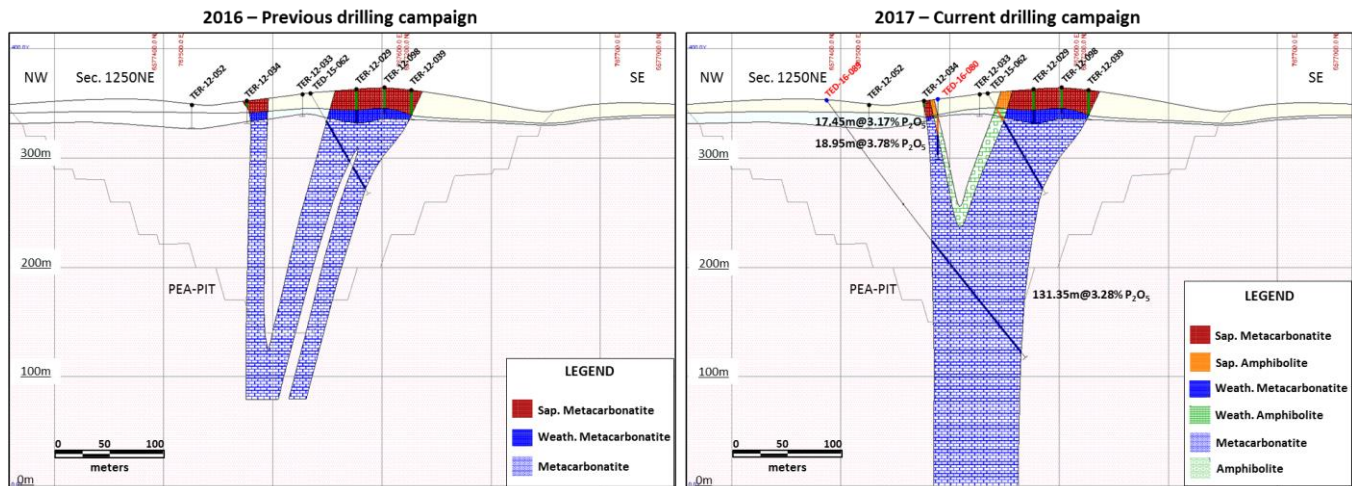

Figure 1: Drilling section 1250NE of the Três Estradas Deposit, showing the thickening of the carbonatite at depth (right) relatively to the previous resource model (left).

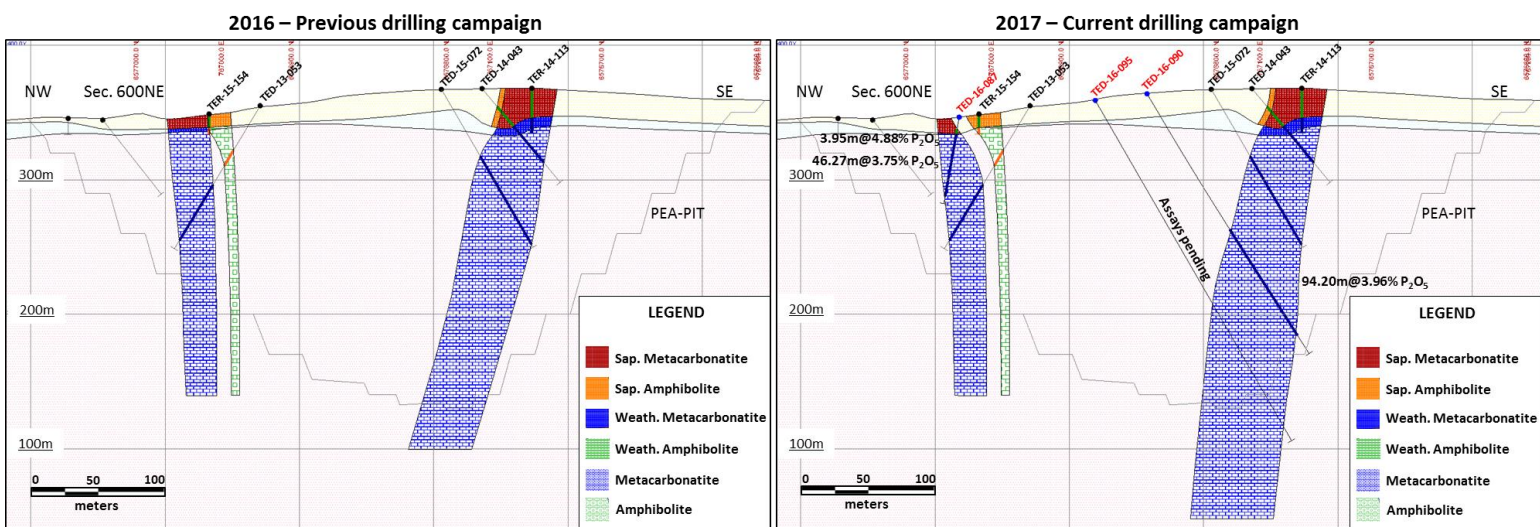

Figure 2: Drilling section 600NE of the Três Estradas Deposit, showing the thickening of the carbonatite at depth (right) relatively to the previous resource model (left).

To date a total of 12,680 metres have been drilled, which includes 8,465 metres of diamond drilling and 4,215 metres of reverse circulation drilling.

Discovery of New Carbonatite Zone

In February, drilling along the southeast sector of Três Estradas found a new carbonatite zone between sections 700NE and 1,200NE. This new and shallow mineralised zone was intercepted in the first 100 metres from surface and is open at depth. The newly identified shallow mineralisation has expanded the interpretation of Aguiá's model for Três Estradas and suggests a structural connection by folding to the previously known carbonatite zones.

As a result, Aguiá's management decided to further expand the drill program by an additional 1,500 to 2,000 metres of drilling to map the extension and thickness of this new carbonatite zone. The potential impact of this new zone could be very significant to the overall project as it has potential to add shallow carbonatite tonnes to the model that will positively influence the pit design, decrease the strip ratio, and ultimately reduce mining costs.

Infill drilling along this zone continues and ultimately the final program will total about 14,000 metres, ~40% more than originally anticipated when the infill drilling commenced in late 2016. Drilling is expected to be complete by the end of April, with results to be incorporated into an updated JORC

compliant resource for Três Estradas which will be released to the market upon completion.

Agua Named a Priority Project by the State

Towards the end of the Quarter, the Três Estradas Phosphate project was named a priority project of the *Sala do Investidor* of the Secretary of Economic Development of the Rio Grande do Sul State.

The objective of the *Sala do Investidor* is to put management of projects considered a State priority directly in contact with the senior levels of Government, including the Secretary of Mining and Energy, the Secretary of Treasury and Taxation, Fepam the State Environmental Agency and CEEE the State Electrical Power Company, among others. The *Sala do Investidor* coordinates the various stages of the project where government action or regulation is required, including not only interaction with State Secretaries and Agencies, but also identifying financing options via Barrisul the local development bank and coordinating with the Municipal Government. Each priority project has a Manager that is responsible for monitoring the stages of the project and providing guidance on taxation and fiscal incentives, financing options, environmental permitting, logistics and infrastructure.

Corporate Developments

During the Quarter, Agua announced that it had commenced the application process to become a listed issuer on the Toronto Venture Exchange (“TSXV”) in Canada. While the ASX will remain Agua’s main listing, by dual listing on the TSXV, the Company will gain access to an expanded investor base as it moves forward to becoming a mineral producer. Agua will be seeking a listing as a Tier 1 Issuer on the TSXV and in future may become eligible for a listing on the Toronto Stock Exchange (“TSX”) once an offtake agreement is in place.

The TSX/TSXV is a robust market with liquidity and access to capital, particularly for the mining sector with participation from over 200 Canadian institutional mining investors and over 500 International institutional mining investors. The TSX/TSXV is the #1 public market for mining companies globally with 1,318 public listings and coverage by almost 300 mining analysts. In 2015, the TSX/TSV accounted for 53% of all equity capital raised in the mining sector, making it the top source of investment for mining companies globally.

To prepare for a TSXV listing, the Company held an Extraordinary General Meeting (“EGM”) on 4 April 2017, at which Agua shareholders voted overwhelmingly in favour of resolutions that will better position the Company for success on the TSXV and provide the Company with flexibility as it advances through to the final Bankable Feasibility Study and required permitting.

Shareholders voted in favour of a resolution to consolidate the outstanding shares which will make the Company’s capital structure and share price more appropriate for the TSXV. Under the approved consolidation, every 5 existing shares will be consolidated into 1 share and by the same token the value of each new share will be multiplied 5X its pre-consolidation price. The same consolidation will apply to any options outstanding at the time. Trading on a consolidated basis will take full effect on April 20th, 2017.

Lucena Phosphate Project

The Lucena Phosphate Project, comprised of 48 tenements and applications for 345,5km², contains an initial JORC compliant Inferred Mineral Resource of 55Mt grading 6.42% P₂O₅ in the state of Paraiba in north eastern Brazil. A feature of the Lucena tenement is outcropping limestone, which is a potential commercialisation opportunity given the presence of a number of cement plants in the region. There was no activity during the March Quarter.

Mata da Corda Phosphate Project

There was no activity during the Quarter.

Plans for the June Quarter

Aguia's current drill program is focused on converting the current Inferred Mineral Resource to Measured and Indicated Mineral Resources to be used as the basis of economic and production forecasts in the Bankable Feasibility Study. The original program has been completed and a further extension will be completed during the June Quarter. To date, the conversion of Inferred Resource to Indicated Resource has been very high, which reflects the continuity of the carbonatite deposit.

During the June Quarter the Company will continue to move forward with its plans for a TSXV listing.

About Aguia:

Aguia Resources Limited, ("Aguia") is an ASX listed company whose primary focus is on the exploration and development of phosphate projects in Brazil. Aguia has an established and highly experienced in-country team based in Belo Horizonte, Brazil with corporate offices in Sydney, Australia. Aguia's key projects are located in Rio Grande do Sul, a prime farming area which is 100% dependent on phosphate imports. The Rio Grande phosphate deposits exhibit high quality and low cost production characteristics, and are ideally located with proximity to road, rail, and port infrastructure. Aguia's experienced management team has a proven track record of advancing high quality mining assets to production in Brazil.

JORC Code Competent Person Statements

The Três Estradas Phosphate Project has a current JORC compliant inferred and indicated mineral resource of 74.7 million tonnes with an average grade of 4.13% P₂O₅, comprising 745,000 tonnes of measured resource grading 4.42% P₂O₅, 15.07 million tonnes of indicated resource grading 4.75% P₂O₅ and 58.89 million tonnes of inferred resource grading 3.97% P₂O₅

The Lucena Phosphate Project has a current JORC compliant inferred mineral resource of 55.1Mt grading 6.42% P₂O₅

The company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements listed above and, in the case of estimates of Mineral Resources or Ore Reserves that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Dr Fernando Tallarico, who is a member of the Association of Professional Geoscientists of Ontario. Dr Tallarico is a full-time employee of Aguaia Resources Limited. Dr Tallarico has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves ("JORC Code"). Dr Tallarico consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
