Redflow reports first major telco sector sale of batteries

Redflow Limited (Redflow) is pleased to announce that it has received its first major ZBM2 battery order from the telecommunications sector, and its largest single ZBM2 product order to date.

The sale, worth about US\$600,000 (about AUS\$800,000), is through Redflow partner Vertiv, which will provide the batteries for an energy storage solution being designed by New Zealand-based Hitech Solutions Ltd (Hitech), which provides telecommunications and infrastructure services.

Vertiv (formerly Emerson Network Power) is a mature Redflow system integrator that has previously deployed ZBM2 batteries for telco-related energy storage systems in New Zealand and Australia.

Hitech is building advanced hybrid energy storage systems to provide reliable, remote power to various sites in a Pacific Island nation. This first ZBM2 order from Hitech supports the first stage of a multiple stage project.
