Alcidion wins Mobile Task Management Solution with Monash Health

Highlights:

- **Miya Smartpage Clinical to resolve Night Hospital workflow across Monash Health.**
- **Miya Smartpage Clinical to extend to 24/7 operation.**
- **Secure messaging and task management platform provides fast and accurate communications and work assignment to improve the coordination of care and to speed up patient flow.**

Adelaide, South Australia, 30 August 2017 - Alcidion Group Limited (ASX:ALC) today announced it has been awarded preferred vendor status following a Monash Health public tendering process for a mobile task management solution.

Monash Health is a large public hospital network servicing the population of the southern Melbourne metropolitan area with two large public hospital facilities (Monash Medical Centre and Monash Childrens) on the Clayton campus and a further four significant facilities comprising hospitals at Moorabin, Dandenong, Casey (Berwick) and Kingston (Cheltenham).

Miya Smartpage Clinical provides instant, two-way messaging, to support clinical supervision, task sharing and fast clinical handover. This functionality streamlines key workflows, and with the integration of clinical summaries and patient clinical data, providing major care team productivity and benefits to patient safety. This capability is of very high value overnight when clinical staffing levels are at the minimum but the patient load is much the same as during peak staffing times. As patients can deteriorate at any time of the day, this system ensures medical staff attention can be quickly brought to bear on those patient's of highest clinical need.

The solution allows instant responses from clinicians, with read receipts and full audit trail management, so that staff do not have to stress over whether or not their requests are being acted on – meaning higher care team productivity and work satisfaction.

Alcidion has structured a trial of the additional Miya Smartpage Orderly module into its offer, to provide for ward based electronic ordering thereby eliminating the need for dispatchers and the associated faxes and phone calls, with fast, orderly requesting directly from the ward, ED, and clinical specialities via it's real time task system. All requests, delays, cancellations are visible to everyone in real time. Miya Smartpage Orderly means there is no more confusion over whether a task has been ordered. Requests are immediately visible to the ward, the destination, and the dispatcher, with real-time updates across the hospital.

The final terms of the contract terms are still under negotiation and are expected to close by the end of this quarter at which time the Company will be in the position to publish the contract value, with the solution expected to be operational by the end of the Calendar Year.

CEO of Alcidion Group Limited, Mr Ray Blight commented, “We are delighted that Monash Health chose to partner with Alcidion to deploy our Smartpage solution and we look forward to assisting Monash Health in achieving outstanding efficiency and patient safety gains.

With Miya Smartpage, Monash Health can look forward to medical staff having more time for direct patient care, higher care team satisfaction at being able to deliver a quality service quicker and patient satisfaction with earlier discharge from hospital”, he said.

Clinical Communications & Collaboration is a critical driver for efficiency within the healthcare sector and the rapid adoption of Smartphones systemically across health is driving an unprecedented level of demand for solutions such as Miya Smartpage.
