

Legal claim

6 October 2017 (Sydney):

NetComm Wireless Limited (ASX: NTC) advises that it has been served with a statement of claim filed in the Federal Court of Australia. The applicant is Corning Optical Communications Pty Ltd (Corning). Corning claims that NetComm's Distribution Point Unit (DPU) NDD-4100 (used in fibre-to-the-curb broadband applications) infringes an Australian Innovation Patent recently obtained by Corning. NetComm Wireless contends that the patent is invalid for numerous reasons and that, in any event, the NDD-4100 does not infringe the patent. NetComm Wireless regards the claims made by Corning as lacking merit, and will vigorously defend the claims made against it.

Corning is seeking injunctions and damages which would only arise if and when there is a hearing and if the Court first determines that the patent is valid and has been infringed.

NetComm Wireless has discussed the matter with nbn who has today confirmed that NetComm Wireless's contract remains in place and that the Company is the preferred supplier of VDSL DPU's to nbn. NetComm Wireless therefore does not expect the claim to impact upon the delivery to nbn of DPU's or upon opportunities being discussed with other overseas telecommunications companies which are outside the scope of Corning's Australian claim.

While the level of potential damages are not regarded as material by NetComm Wireless, this disclosure has been made to ensure the market is fully informed. NetComm Wireless will keep the market informed of any significant developments.
