ASX RELEASE

DroneGun MKII Certified for Human Exposure

DroneShield Ltd (ASX:DRO) ("DroneShield" or the "Company") is pleased to announce that its DroneGun MKII product has been certified as compliant for human exposure, in connection with requests by potential governmental end-users, in relation to their procurement processes.

EMC Technologies, a specialist SAR (Specific Absorption Rate) measurement NATA (National Association of Testing Authorities) approved laboratory for global certifications, has certified DroneShield's DroneGun MKII as compliant with the ARPANSA EN 62311 and EN 62209-1 (Australian and New Zealand Communications and Media Authority requirements for human exposure to radio frequencies) within the specific frequency bands of operation which cross references to the international ICNIRP standard.

The certification was obtained in response to the DroneGun product advancing through procurement processes with a number of major defence and other government agencies internationally, for which this was a requirement requested by several agencies. This international certification further underscores the leadership position of the DroneGun product, and is expected to assist the purchasing processes by the relevant government end-users.
