31 January 2018

DECEMBER 2017

QUARTERLY ACTIVITIES & CASHFLOW REPORT

During the December 2017 Quarter work program proposals, principally at Copper Hill and the Queensland phosphate projects, were supported by the major shareholder HQ Mining Resources Pty Ltd ("HQ Mining") with an approved budget of \$700,000 to the end of January 2018. A total of \$800,000 funding was received with the final tranche received on 21 November 2017, enabling commencement of the programs.

An updated review of current projects is provided in the following pages.

Corporate

HQ Mining and its associates currently hold 76.21% of the Company's shares and continued to provide funding support for the Company's activities during the Quarter via loan facilities. The Company continued discussions with HQ Mining, broking firms and potential investors regarding funding of future work programs, principally a Pre-feasibility Study at the Copper Hill Project.

HQ Mining has indicated it is willing to provide further funding to support work programs during the first half of 2018. The Company continues to assess this and other options and expects to make a decision during February 2018 on the structure, key terms and timetable for securing the additional funding required to progress Copper Hill and the Company's other projects to the next stages as well as to consider new opportunities.

REVIEW OF PROJECTS

GCR's portfolio of projects is diversified both by commodity and by geological province (**Figure 1**). It includes projects located in:-

- Central NSW Porphyry Province - Copper/Gold
- South Australian Gawler Craton - Iron Oxide/Copper/Gold (IOCG)
- Northwest Queensland – Phosphate/Uranium
- Cobar Region NSW – Base Metals/Gold
- Lachlan VMS Belt NSW – Zinc/Copper/Gold

Prospectivity in each of these provinces is demonstrated by regional operating mines and/or significant deposits. The portfolio has been refocused over the past two years with selected divestment of non-core properties.

The Company remains committed to progressing its Copper Hill Project once additional funding is secured. In 2017 GEOS Mining Consultants were commissioned to review the 2015 valuation of Copper Hill. GEOS concluded a preferred value of \$14.4 million for the Copper Hill Project within a range of \$7.6M to \$26.5M (compared with the 2015 value of \$13.2M within a range of \$10.0M to \$14.5M). The new valuation considered several factors, including improved commodity prices and outlook and increased weighting to discounted cashflow (refer ASX announcement dated 21 September 2017).

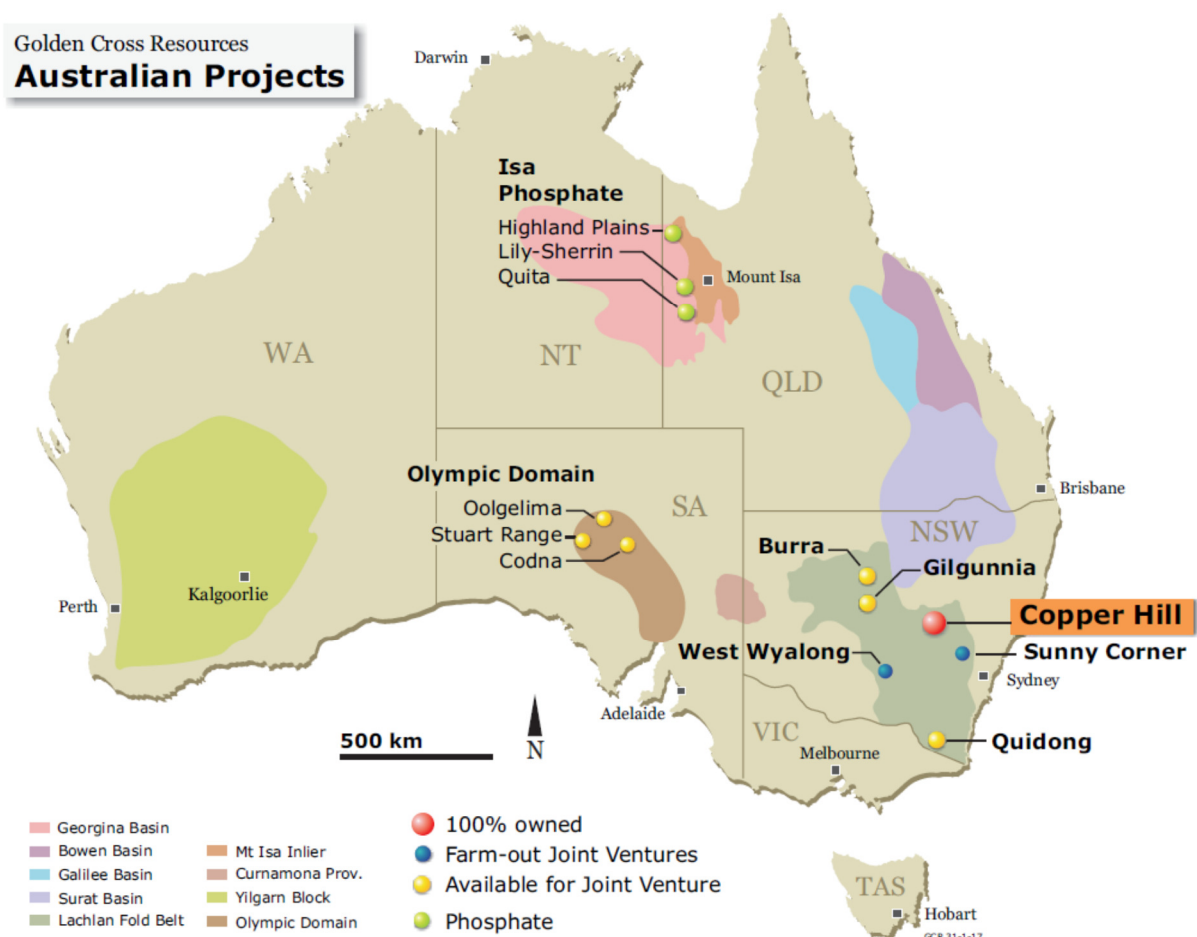

Figure 1: GCR Projects Status Map
[details of current projects are included in the Mineral Tenements Table at end of this report]

Copper Hill

GCR 100%

Copper Hill is approximately 50 kilometres north of the Cadia Valley Project, one of Australia's larger producing goldmines with annual production of 620,000 ounces gold and 63,800 tonnes copper in FY 2017 (Newcrest ASX 17 July 2017 Quarterly Report June 2017).

Porphyry copper-gold deposits in the Copper Hill area occur within the same Ordovician-age volcanic belt that hosts Cadia-Ridgeway and other significant deposits. Copper Hill is located on the northern edge of a corridor formed by the interpreted WNW-trending Lachlan Transverse Zone (**Figure 2**).

The broader low grade mineralised envelope at Copper Hill contains a higher grade core containing 160,000 tonnes copper and 480,000 ounces gold in 28 million tonnes grading 0.56% copper and 0.53 g/t gold, calculated at a 0.4% copper cut-off (GCR: ASX 15 April 2015).

In March 2015 the Company completed a Scoping Study (GCR: ASX 25 March 2015), based around the higher grade core, that identified the components required to progress towards a mining project, including:

- Drilling to extend high grade zones, provide density data, twin RC holes, clarify geometric controls, and provide resource definition data
- Resource updates utilising additional data from drilling
- Metallurgical testwork
- Mining & engineering studies and costing updates
- Environmental studies and baseline data
- Water supply sources and usage
- Permitting at state and local government level

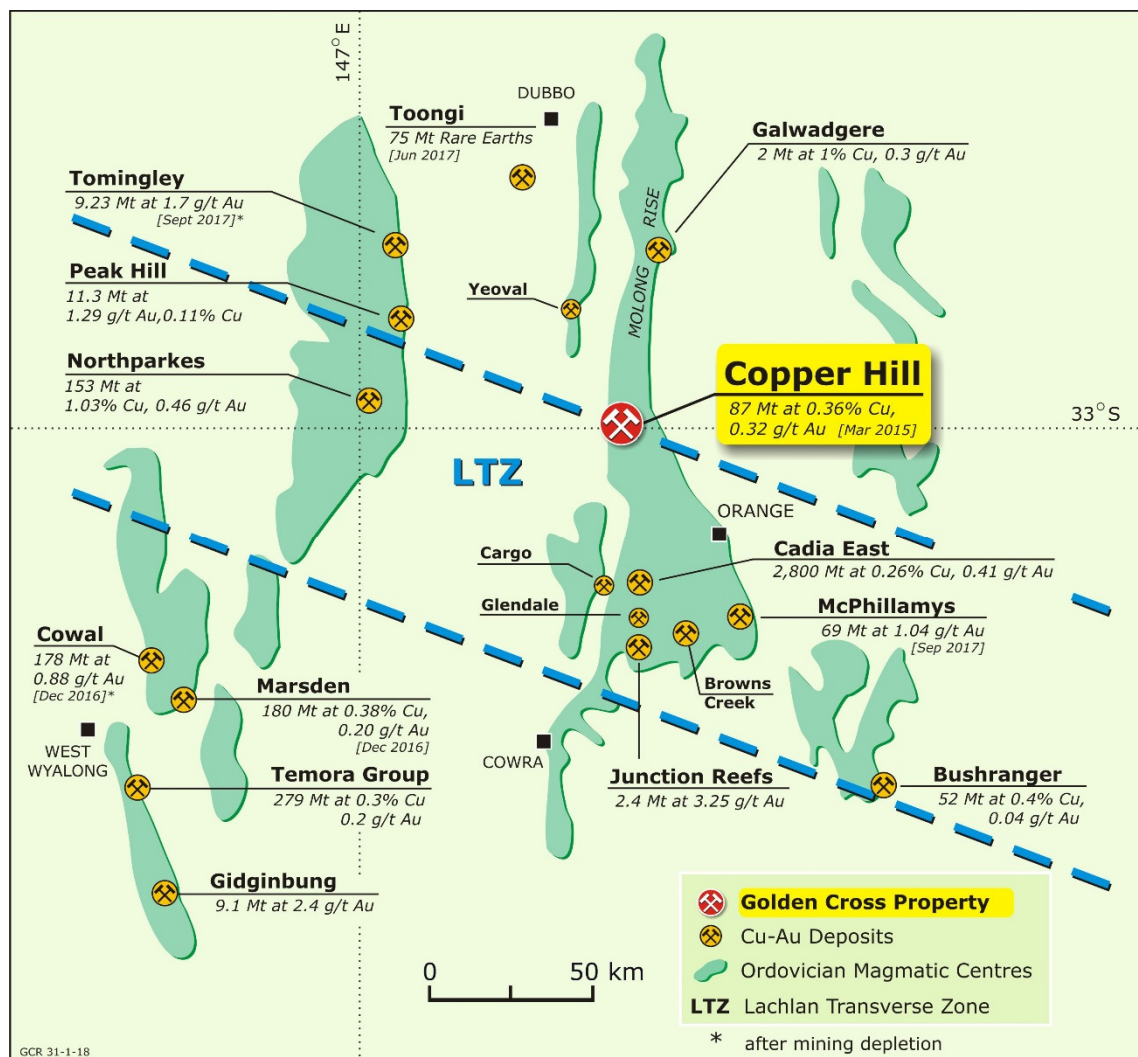

Figure 2: Copper Hill on NSW Porphyry Provinces

During the December Quarter a government-approved compliance program of drilling was completed to follow up the extent of higher grade intercepts outlined by 0.4% copper cutoff criteria in 2014 drilling. (GCHD470 – refer to GCR:ASX 25 August 2014, and GCHD 474 - refer to GCR:ASX 11 December 2014).

Two holes were completed totalling 362.9 metres of core drilling. Hole GCHD 475 was drilled on Section 5300N to test 50 metres up-dip from higher grades zones in previous hole GCHD 474, while hole GCHD 476 was drilled obliquely to section 5600N to test structural orientations identified in previous hole GCHD 470 which are interpreted to preferentially control the distribution of copper and gold. Drill hole locations are shown in **Figure 3** and cross-sections on page 13 and 14 at the end of this report.

The drill core assay results released in ASX announcements dated 23 January 2018 (GCHD 475) and 25 January 2018 (GCHD 476) are summarised in the tables below.

Table 1: Drill Results using 0.4% copper cut-off grade:

Containing maximum 4 internal consecutive metres at < 0.4% copper:
Intervals less than 6m not listed

Hole ID	From (m)	To (m)	Interval (m)	Copper %	Gold g/t (ppm)
GCHD 475	130	164	34	0.51%	0.33
GCHD 475	172	180* (*EOH)	8	0.46%	0.71
GCHD 476	24	34	10	0.43%	0.14
GCHD 476	111	118	7	0.72%	2.22
GCHD 476	129	158	29	0.42%	0.66

Table 2: Drillhole Location Data

Hole ID	MGA East	MGA North	Elevation (m)	Dip	Azimuth	Length (m)
GCHD 475	674700	6341310	591.8	60	227	180.0
GCHD 476	674342	6341440	548.7	60	180	182.9

Azimuth in degrees magnetic. The Copper Hill Local Grid is located 49.9 degrees counter-clockwise (west) from Magnetic North and 38.5 degrees west from MGA North.

The higher grade intervals in the current drilling are consistent with the higher grade zones identified in 2014 drilling. The intervals occur within a broader lower grade envelope defined by grades greater than 0.1%-0.2% copper which generally commence at the base of complete oxidation at 10-40 metres down hole.

Variations in length and grade of the higher grade +0.4% copper intercepts compared with the 2014 holes reflect the influence of a network of structures that control the multiphase intrusives and mineralising events along with later stage dislocation along some structures. While continuity of the overall mineralised system is good, the combination of these structural features affects correlation of higher grade zones from hole to hole over distances of 50 metres or more.

The current interpretation of extensive drilling and surface structural data is that the dominant mineralisation fabric is grid northwest as shown in **Figure 1** and this orientation tends to host higher copper grades, whereas higher gold grades are more likely in north-trending host structures. Higher grades of both copper and gold are also hosted in northeast-plunging lodes representing the intersection lineation of the north and north-west structures. These may provide a potential vector to deeper, high grade targets and possible mineralisation sources, as well as refining the Resource model.

Visual logging of structures showed chalcopyrite mineralisation in veins with several orientations, and further analysis of the detailed structural data is required to confirm preferred directions for deposition of copper minerals in the latest holes. The current east-west drilling orientation is considered the best compromise to test all orientations.

Assays from GCHD 475 returned high grade mineralisation (0.66% copper and 1.03 g/t gold) at end of hole that is outside the current higher grade (>0.4% copper) resource blocks and indicates potential to extend the higher grade mineralisation deeper towards zones in GCHD 474 (see Section 5300N on page 13).

Results in GCHD 476 indicate an extension of Resource grade mineralisation approximately 80 metres down dip from previous hole GCHD 470 into an area where the current block model was constrained by limited drilling and also indicates potential for extensions at depth towards the 300m level (see Section 5600-OB on page 14).

The analytical data and structural data will contribute to improved understanding of the internal architecture of the deposit and feed into future resource estimates and development studies.

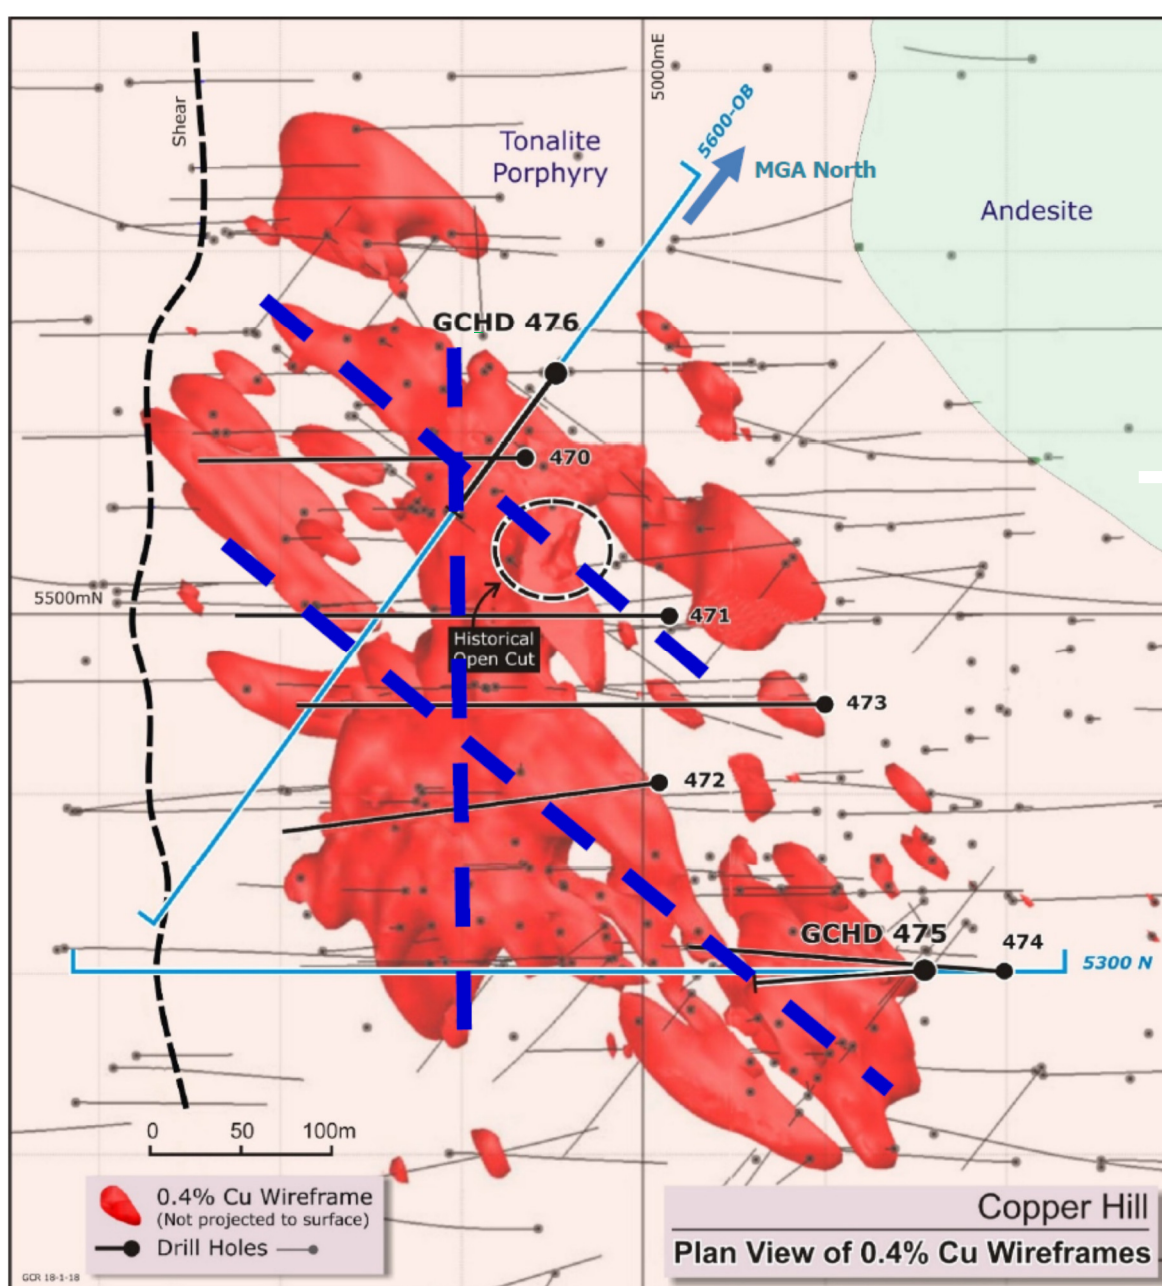

Figure 3: Drill hole locations GCHD 475 & 476 and dominant structural fabrics
Copper Hill Local Grid shown is rotated 38.5 degrees counter-clockwise (west) from MGA North

SOUTH AUSTRALIA Iron Ore Copper-Gold (IOCG) GCR 100%

In South Australia several magnetic/gravity targets have been identified by GCR. Three targets have been prioritised for drilling, subject to availability of funding, after encouraging results from the 2013 drill program. The targets are located at the north-western end of the interpreted structural corridor that contains significant copper-gold deposits at Carrapateena, Olympic Dam, Prominent Hill and Cairn Hill (Figure 4).

Proposals for a three-hole program received State Government approvals during the September 2017 Quarter and native title site clearances have been undertaken. Commonwealth Government approvals are awaited for two of the holes. Ongoing surface evaluation of new targets using geophysics is planned to identify future sites.

Approaches continue to be received from parties interested in farming in to these properties.

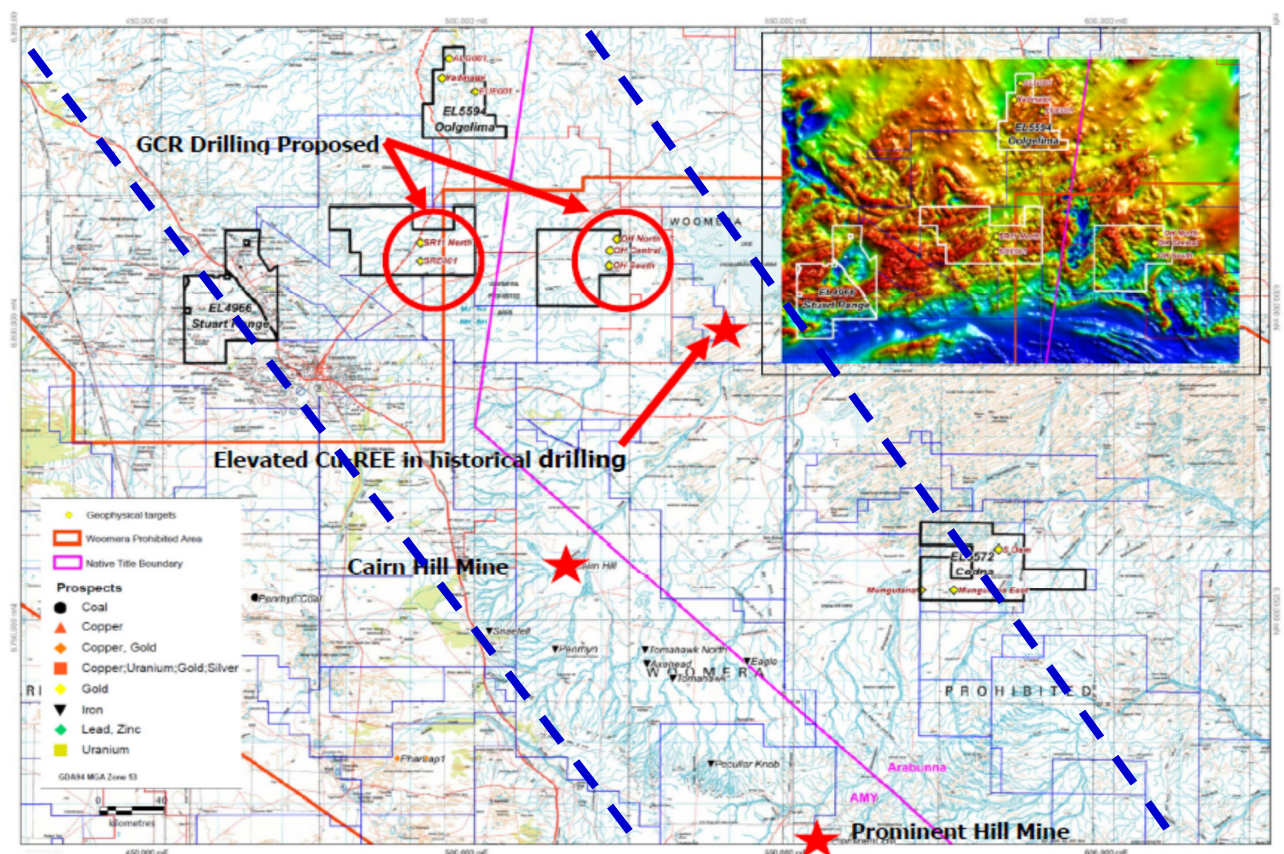

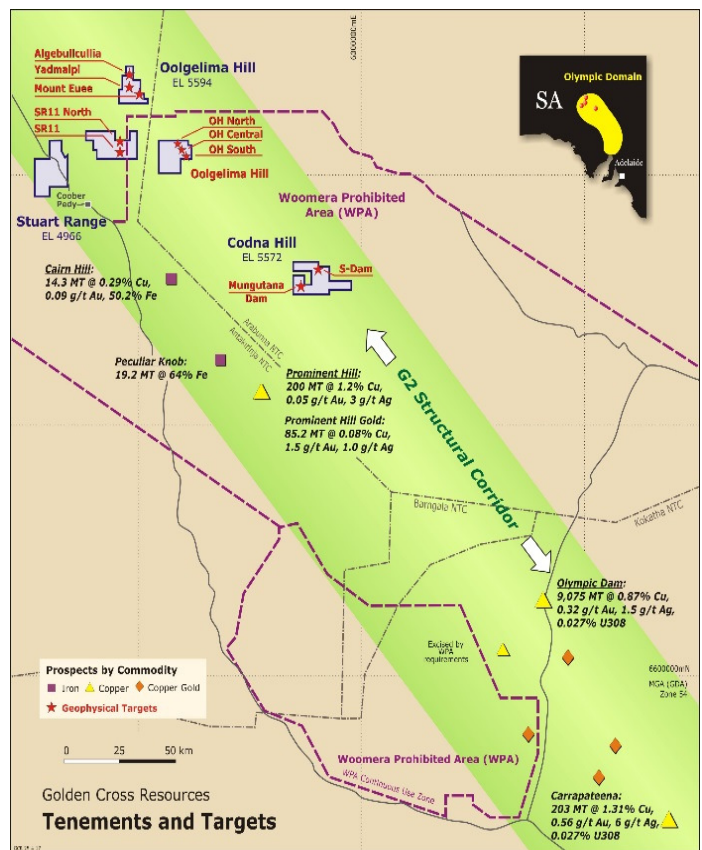

Figure 4: Gawler Craton Projects: Location & Drill Targets
(inset shows targets on magnetic image)

COBAR REGION

GCR 100%

The Cobar region is well endowed with high grade polymetallic deposits supporting long life mining operations. After divestments, GCR has a residual holding of strategically located tenements (**Figure 5**) remaining in two areas.

Canbelego – along strike from Mt Boppy Goldmine.

Gilgunnia – along strike from Aurelia Metals' Hera gold/base metal mine and Peel Mining Limited's high grade copper discovery at Mallee Bull and recent depth extensions at Wirlong and Wagga Tank.

Following completion of a previous agreement with Peel Mining Limited to consolidate fragmented tenements, current tenements are Burra and Kilparney Extended.

GCR is well placed to seek new opportunities in the region based on the depth of its operating experience.

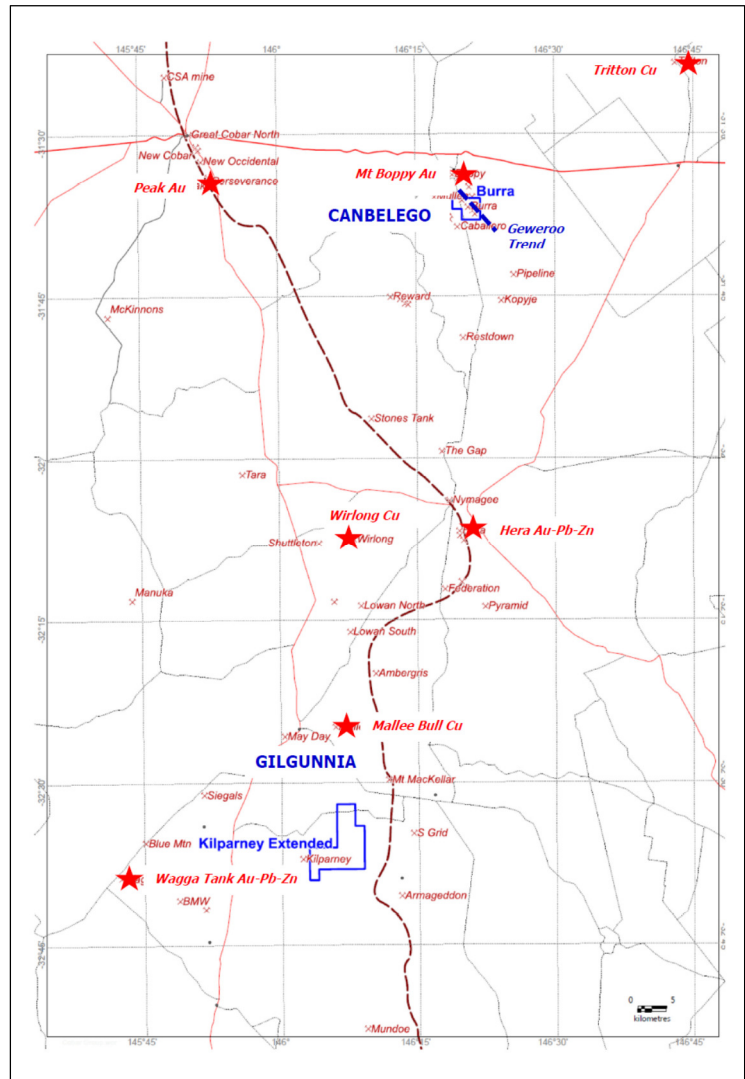

Figure 5: Cobar Region Projects

LACHLAN VMS PROVINCE

Silurian formations prospective for volcanic-associated massive sulphide (VMS) deposits extend over 300km from the Orange-Bathurst region in NSW through Woodlawn and Captain's Flat and southwards into eastern Victoria.

Quidong

GCR 100%

Quidong has extensive occurrences of carbonate-hosted zinc/lead and gold mineralisation, and potential intrusive-related gold mineralisation, which occurs elsewhere in the region. Previous data and GCR field reconnaissance have identified high grade zinc-lead-gold drill targets which remain to be tested. Electrical prospecting methods were trialled in November 2016 but the large amount of sulphidic rock in the area has rendered the results inconclusive and alternative techniques for refining drill targets are being evaluated, in conjunction with the proposed drilling program.

Sunny Corner

JV with Argent Resources Ltd (ARD). ARD 70%; GCR 30%

No field activity reported by JV partner.

ISA PHOSPHATE

GCR subsidiary, King Eagle Resources Pty Ltd (King Eagle), holds 100% of three deposits: Highland Plains, Lily & Sherrin Creek and Quita Creek (**Figure 6**), which account for a third of the historical phosphate resources of the province.

The Highland Plains phosphate deposit extends westwards into the Northern Territory where the western part is held by POZ Minerals Ltd. A maiden JORC 2004 resource for the western part of Highland Plains was announced on 31 March 2009.

The Quita Creek deposit is 25 kilometres from the Ardmere deposit acquired by Centrex Metals Ltd (CMX) in 2017, which has advanced to a resource upgrade and scoping study (Refer CXM ASX 15 January 2018).

During the Quarter King Eagle progressed the renewal applications for its three licences and compiled the historical drilling data for review by a consultant with recent experience in the region. The aim of the data review is to identify and evaluate high grade phosphate zones and determine the work program required to upgrade the historical resources to JORC 2012 compliance.

OTHER JOINT VENTURES

West Wyalong

JV with Argent Minerals Ltd (ARD). ARD 78%; GCR 22%

Following definition of exploration targets using geophysics, ARD completed a six-hole program of core drilling totalling 2,427 metres to test the Theia and Narragudgil targets. Results outlined elevated copper, gold and molybdenum values leading to interpretation of a nearby porphyry source. (ARD:ASX 3 July 2017, 17 July 2017). During the Quarter GCR continued to dilute its interest by electing not to contribute to JV expenditure.

Full names for abbreviations are as follows:

GCO	Golden Cross Operations Pty Ltd, a wholly owned subsidiary of GCR
KER	King Eagle Resources Pty Limited, a wholly owned subsidiary of GCR
ARD	Argent Minerals Limited (ASX: ARD)
GCRP	GCR Panama, Inc, a wholly owned subsidiary of GCR
MTI	MapIntec Technologies Inc.

- (1) ARD earned 51% in the West Wyalong Joint Venture by spending \$750,000 by 1 June 2011. On 21 April 2017 ARD advised additional expenditure totaling \$600,000 (for a total expenditure of \$1,350,000) by 30 June 2017 was achieved, increasing its JV interest to 70%. Further expenditure by ARD in 2017 has increased its JV interest to 78% with GCR diluting to 22%. Royal Gold Inc holds a 2.5% net smelter return.
- (2) ARD earned 51% in the Sunny Corner Joint Venture by spending \$500,000 by 1 June 2011 in Stage 1. It earned 70% by additional expenditure of \$186,000 (for a total expenditure of \$686,000) by July 2013.
- (3) MapIntec Technologies Inc., a Panamanian company, has a 10% interest free-carried to a decision to mine.

Compliance Statement: The information in this report that relates to Exploration Results is based on information compiled by Mr Bret Ferris, who is a Member of the Australasian Institute of Geoscientists (AIG). Mr Ferris is a consultant to Golden Cross Resources Limited and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the “Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves”. Mr Ferris consents to the inclusion in this report of the matters based on that information in the form and context in which it appears.

The Production Target and the Mineral Resources on which it is based are extracted from reports released to the ASX by GCR on 24 March 2015 and 15 April 2015. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that all material assumptions and technical parameters underpinning the production target in the report dated 15 April 2015 continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcements.

Forward-Looking Statements: This document may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning planned exploration program and other statements that are not historical facts. When used in this document, the words such as “could,” “plan,” “estimate,” “expect,” “intend,” “may,” “potential,” “should,” and similar expressions are forward-looking statements. Although Golden Cross Resources Limited believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements.

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
