

## NetComm Wireless welcomes nbn's expanded FTTC footprint

**10 April 2018 (Sydney): NetComm Wireless Limited (ASX: NTC)** welcomed today's announcement by NBN Co Ltd (nbn) that it would increase its planned Fibre-to-the-Curb (FTTC) footprint, with an additional 440,000 homes and businesses around Australia set to receive the new technology. This takes the total planned FTTC footprint closer to 1.5 million homes and businesses by 2020.

As previously announced, NetComm Wireless has agreements with nbn for the supply of both Distribution Point Units (DPUs) and Network Connecting Devices (NCDs) that together provide the FTTC connection to customer premises. At present, NetComm Wireless is the only supplier with tested, approved, installed and working FTTC equipment.

In relation to the expanded FTTC footprint announced by nbn today, no orders have yet been received. However, NetComm Wireless is hopeful that as the rollout progresses over the coming years, it will receive further orders.

Ken Sheridan, CEO and Managing Director of NetComm Wireless said: "We welcome the nbn's announcement to expand its FTTC footprint to almost 1.5 million Australian homes and business premises. We have worked closely with nbn to support their FTTC project and enhance the effectiveness of their rollout. With NetComm Wireless at the leading edge of key technology developments that provide real benefits to network operators, we look forward to further growing our relationship with nbn as it expands the planned footprint of its FTTC project."
