ANO Increased Production Capacity

US Manufacturing

We have successfully completed and shipped our first batch of product from the US manufacturing facility to customers for their own Quality Assurance testing process. Two further batches are required by customers for their approval before the US facility will commence production on a regular basis.

Production Capacity

The new ovens will be completed on 29 September 2018 and we anticipate the ovens arriving in Brisbane in November 2018. The increase in orders is being met with ongoing current improvements to process and equipment, and by combining pre-existing facilities into one.

Further quotes are currently being obtained for additional equipment which we have identified to increase production capacity and improve efficiency.

Sales Orders

We have witnessed a significant increase in forward sales orders for ZinClear and ZinClear XP from now until the end of November 2018 that is in excess of 50% above our sales revenue for the corresponding period in FY18.
