ASX ANNOUNCEMENT

11 February 2019

Zoono Passes Challenging and Globally-Recognised Anti-microbial Test

Results are further validation of Zoono's residual antimicrobial efficacy

Investment highlights

- Zoono's surface sanitiser passed the BSI PAS 2424:2014 Test
- The result once more demonstrates the efficacy of Zoono's technology and the advantage of Zoono over other products
- Zoono is currently in advanced negotiations with several multinational companies and this results further bolsters Zoono's credibility

Global biotech company Zoono Group Limited (ASX:ZNO) ('Zoono' or 'the Company') is pleased to announce that its Z-71 Surface Sanitiser has passed the notoriously challenging BSI PAS 2424:2014 Quantitative Surface Test ('the Test').

The Test evaluates the residual antimicrobial (bacterial and/or yeasticidal) efficacy of liquid chemical disinfectants on hard non-porous surfaces. It is considered the ultimate test of a product's ability to remain on a surface and maintain an antimicrobial protecting shield for 24 hours or more.

Passing the Test once more demonstrates the significant advantage Zoono has over other products and validates Zoono's ability to be able to deliver the efficacy results demanded by multinational companies worldwide.

Most surface cleaners and disinfectants only work while wet, allowing the surface to become re-contaminated to dangerous levels within a few hours of cleaning. Zoono is different; it continues to work even when

dry, continuously delivering long-lasting antimicrobial protection on all surfaces and the skin.

Zoono is currently in advanced negotiations with several multinational companies in the UK and EU. This result provides the Company with enormous credibility and will assist with current contract negotiations. It will also open other significant revenue opportunities for the Company.

The Test is conducted by independent laboratories to exacting standards and is recognised in both Europe and the United States. MSL, the preferred UKAS Accredited Laboratory, conducted the Test on Zoono's Z-71 Surface Sanitiser.

MSL Director Carolyn Burney said: "Zoono has achieved an outstanding result by passing the PAS 2424 test. This truly demonstrates the residual efficacy of the product under stress conditions and the significant advantages that it offers to consumer, healthcare and commercial environments."

Zoono Managing Director and CEO Paul Hyslop said: "We are thrilled to have passed this important test which further validates the efficacy of Zoono's technology. As the impact of antibiotic resistance increases, Zoono provides a unique way to significantly reduce the risk associated with infections, cross-contamination and the impact of sickness on businesses."

About Zoono

Zoono Group Limited is a global biotech company that develops, manufactures and distributes a suite of scientifically-validated, long-lasting and environmentally-friendly antimicrobial solutions. Zoono's mission is to

improve health and well-being through innovative, safe, non-toxic and durable germ protection.

Zoono produces sprays, wipes and foams suited for skin care, surface sanitisers, and mould remediation treatments. The products are based on the 'zoono molecule', a unique antimicrobial molecule that bonds to any surface and kills pathogens including bacteria, viruses, algae, fungi and mould.

Zoono's products have received numerous regulatory approvals and the company's technology claims are supported by independent testing conducted in laboratories worldwide. Zoono is headquartered in New Zealand and its products are available globally.

About MSL

MSL was founded in 2001 as a microbiological testing laboratory, primarily for the personal care and household cleansing markets and that is still at the core of its business. The company has grown year on year and is expanding into new markets on a regular basis. It offers organisations an integrated approach resulting in products and services getting to market quickly, legally, and cost effectively, whilst ensuring the highest standards of testing.
