Alcidion selected as strategic solution partner for Brighton and Sussex University Hospitals NHS Trust in the UK

~\$1m deal over five years for Patienttrack software solution

Highlights

- Alcidion selected as strategic solution partner for Brighton and Sussex University Hospitals NHS Trust in the UK, a contract valued at \$1.03 million over five years
- Brighton and Sussex University Hospitals NHS Trust will implement Alcidion's Patienttrack software solution to improve patient care and safety
- The Trust has an ambitious "best of breed" ICT strategy to support its continuous process of improvement leading to measurable improvements for patients and staff.

Adelaide, South Australia – Alcidion Group Limited (ASX: ALC) has been selected as the strategic solution partner for Brighton and Sussex University Hospitals NHS Trust in the UK, under which Alcidion will implement its Patienttrack technology solution.

Alcidion's five-year contract with Brighton and Sussex is valued at £574,000 (~\$1.03 million).

The Trust has four hospitals and employs approximately 8,200 staff. It also delivers specialist and tertiary services for patients from across the south east of England and is also the Major Trauma Centre for the region.

The Trust has a long-term approach to transforming hospital service for the better called the "Patient First Improvement System", which aims to empower front line staff by equipping them with new tools, methods and a structured process that leads to measurable improvements for patients and staff.

Central to this transformation is the Trust's role as an academic centre, being a provider of high-quality teaching, and a host hospital for cutting edge research and innovation. On this, it works in partnership with Brighton and Sussex Medical School, Health Education England, Kent, Surrey and Sussex Postgraduate Deanery and the Universities of Brighton and Sussex.

Alcidion was selected from a competitive tender process, to implement its Patienttrack software to improve patient safety and support clinicians in delivering better care. Patienttrack is being used widely by NHS hospitals to capture vital signs and other patient risk factors electronically – at the bedside - improving the timeliness and effectiveness of patient monitoring and improving clinical workflow. Patienttrack also uses data analytics to provide doctors and nurses with early warning signs when patients are at risk.

Ian Arbuthnot, the Trust's director of information management and technology said:

'Following a thorough selection process, we are very pleased to be working with Alcidion to implement its world-class mobile technology software solution across our hospitals. Alcidion's Patienttrack product will provide our clinicians with a solution that allows them to capture patients' vital signs, automatically calculate the NHS's NEWS2 (National Early Warning Score) and alert clinicians to deteriorating patients, through mobile devices. The system will also deliver a range of patient assessments for conditions such as Sepsis, and Acute Kidney Injury and many more that will reduce the burden of paperwork and deliver real-time information in an integrated patient view at the point of care'.

Alcidion's Managing Director, Kate Quirke said: "We're delighted to welcome Brighton and Sussex University Hospitals NHS Trust as a new client and partner. To have another NHS Trust contract with us further solidifies our position as one of the leading suppliers of e-observations and clinical documentation solutions and it is very pleasing to be an integral part of the digital transformation program taking place across the NHS."

Alcidion's UK General Manager Donald Kennedy said: "This is another significant show of confidence in the benefits that Patienttrack is delivering to UK hospitals. We look forward to working with the Trust to progressively expand their use of innovative technology that interoperates seamlessly with their existing systems and enables their ambitions to provide excellent technology to their staff, improve patient safety and deliver better and more cost-effective patient outcomes."

ENDS
