ANO Sales Upgrade

Today we release our latest investor presentation, indicating further increase in total sales for FY19 from \$10.5 million to \$12.6 million. This is subject to no unforeseen delays in manufacturing or machinery breakdowns over the next 2 months. The impact on profit is dependent on the timing of shipments.

Equipment Update

We can confirm that the new equipment has successfully passed all validation processes and full scale production is scheduled to start by 1 May 2019 or prior.

We have placed orders today for additional equipment to cater for the expected growth in powder sales in FY20. We expect to have these commissioned and fully operational around October 2019.
