DGO Gold Consolidates its Land Position near Mt Tom Price, Pilbara, Western Australia

ADDITIONAL INFORMATION STATEMENT

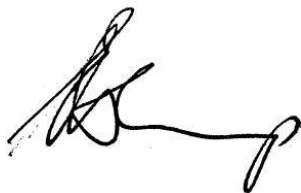

DGO Gold (DGO:ASX) wishes to provide the following additional information in relation to its announcement released on 11 July 2019 regarding the extension and consolidation of its gold exploration land position near Mt Tom Price in the Pilbara, Western Australia.

The announcement included reference to previous exploration (pre 2008) which identified anomalous gold mineralization up to 3.5g/t in rock chip samples of siliceous chert units within the 70 km long regional anticlinal structure in the Pyradie Formation which will be the focus of DGO Gold's exploration for sediment hosted gold mineralisation.

The previous exploration refers to exploration carried out by Independence Group NL (IGO) on the Wackilina Project (E47/1204, E47/1205, E47/1245 and E47/1246) as documented in West Australian Department of Mines, Industry Regulation and Safety (DMIRS) open file report A69705 – *Independence Group NL First Annual Report Wackilina Project for period 27th July 2003 to 3rd December 2004*.

The results were originally released in ASX announcements by IGO in 2003, most notably in an ASX announcement on 28 July 2003 – *Wackilina Gold Project*, and in subsequent quarterly and annual reports and presentations.

The source of DGO Gold's results is DMIRS open file reports and drilling and geochemical databases down-loaded from DMIRS.

Eduard Eshuys

Executive Chairman
