**September 2019  
Quarterly Report**

Dateline Resources Limited (ASX:DSE) (“Dateline” or the “Company”), is pleased to provide this Activities Report on the Company’s Gold Links project, Colorado, for the three-month period ending 30 September 2019.

**Gold Links drilling program:**

During the quarter, the Company continued its 8,000metre RC drilling program at the Gold Links project.

The primary objective for the program was to prove the down-dip extension of both the Sacramento and 2150 veins. The extension of these high-grade veins has been successfully confirmed.

As at today’s date, Dateline confirms that it has completed the majority of the program and successfully drilled high priority holes through the northern section of the Gold Links project and will report all drill hole data completed post September 30 in a separate release.

**Sacramento Vein:**

Drilling has provided a more structural understanding of the geology of the Sacramento Vein, located on the northern side of the project. To September 30, a total of 16 holes over 1628 metres have been drilled, with the following being the most notable:

- **SAC 13 – 1.75m at 24.9g/t Au and 153g/t Ag (inc. 0.5m at 80.1g/t Au and 489g/t Ag).**
- **SAC06 – 0.5m at 14g/t Au and 97.4g/t Ag.**
- **SAC16 – 0.7m at 18.1g/t Au and 241g/t Ag.**

These results have defined a number of deeper targets that have been assessed for follow-up drilling.

Figure 1: Holes drilled towards the Sacramento vein

**2150 Vein:**

Drilling of the extension of the 2150 vein commenced during the period with a total of 13 holes drilled totaling 2445 metres. As advised on September 4, the Company has completed six holes, all of which intercepted gold and silver mineralisation in the down-dip extension of the 2150 vein and has since pre-collared a further six holes. The most prominent intercept during the September Quarter included:

- **GL03 – 1.57m at 30.4g/t Au and 78g/t Ag (inc. 0.3m at 151.g/t Au and 143g/t/ Ag)**

Following a review of the program and assays generated, management will begin planning a follow up program to commence early 2020. The Company expects remaining assays from the current drill campaign will be reported in the coming weeks.

Figure 2: Holes drilled towards the 2150 vein

**Further exploration initiatives:****Geophysics**

Early stage core property testing shows that veins usually have a strong IP response (>50 msec) and that most wall rocks have a low IP response (<15 msec). While there is some overlap, the segregation of results is promising in that it appears to distinguish between the mineralized vein and the barren wall rock.

Logging of the longer holes has identified very significantly changed rock types. Further relogging should be complete in the December Quarter at which stage it will be used to create a geologic model to assess the IP response and determine whether downhole IP is a viable tool.

**New “Hill” Vein discovery:**

In October 2018, Dateline acquired LIDAR data that covered 3,623 hectares which essentially covers the entire project area. Following the digitisation of this data, follow up mapping and sampling was undertaken during the period that resulted in the discovered of the Hill Vein.

The Hill Vein is located to the south of the Sacramento workings. Mapping has traced the vein for 100m to the south-east. Opening the northern most adit on the Hill Vein allowed sampling to occur. These samples returned promising assay values of:

- **56.5g/t Au and 200g/t Ag.**
- **12g/t Au and 193 g/t Ag.**

Dateline’s technical team is encouraged by these initial results and will progress additional mapping, sampling and drilling of the Hill Vein.

**Lucky Strike and Mineral Hill tenements**

Dateline undertook a first pass soil sampling program during the period with approximately 500 samples taken from Lucky Strike and Mineral Hill tenements located in the Green Mountain district of Gunnison and Saguache Counties in Colorado. ALS Geochemistry is assaying these samples at present with results expected shortly.

Further, the Company commenced a Ground Magnetic Survey and Surface Mapping program to identify additional high priority targets for follow-up exploration.

**Grab sampling defines mineralisation extension:**

Surface sampling, in conjunction with previously underground sampling and drilling, confirmed that mineralisation extended for at least 225m along the Sacramento Vein. Drill hole SAC14 (pictured above) showed that gold values extended 65m into the footwall. The recently discovered Hill Vein is currently mapped on the surface over a length of 100m and to within 120m of the Sacramento Vein.

The data indicates that mineralisation extends from 325m north to south, across the currently identified portions of the Sacramento Vein and Hill Vein systems. Both are open along strike and down-dip.

**Operations at Udu Project – Fiji:**

Management advises that metallurgical test work at the Udu polymetallic project in Fiji is ongoing. The project contains a JORC compliant inferred resource estimate of 4.53 million tonnes averaging 3.9% Zn, 1.2% Cu, 0.14% Pb, 0.26g/t Au, 29g/t Ag and 635ppm As using a 0.5% Zn cut off.

Results from test work are expected in the coming months. Board and management have determined to spend the minimum amount required to retain ownership of the project with joint venture or farm in partner being pursued.

**Appointment of Anthony John Ferguson as Non-Executive Director:**

During the quarter Dateline further strengthened its Board with the appointment of Anthony John Ferguson as a Non-Executive Director. Mr. Ferguson is an investor, entrepreneur and investment banker with considerable resource sector experience.

The majority of his career was spent with Macquarie Group where he led the natural resources team. He was responsible for advising on multiple large transactions in the mining industry in Australia and internationally. Mr. Ferguson also established Macquarie's presence in Canada, led its Asian investment banking operations and established the Asia Resources Fund. His career also included three years in senior roles at Rothschild Investment Bank.

**Corporate:**

The Company expended \$1,525m during the current period, predominately on exploration activities with corporate costs remaining low. Dateline is well capitalised with ~\$3.3m of cash at bank as at 30 September 2019.

**Management commentary:**

Managing Director Stephen Baghdadi said: "The September quarter has been a period of solid achievement for Dateline. The Company continued to advance exploration activities predominantly with the ongoing comprehensive RC drilling program which was undertaken to determine if existing veins continued below the known workings. We have successfully confirmed this through the initial phase of this drill program.

"The discovery of the Hill Vein and the extension of mineralisation across the project area provides Dateline with considerable optionality and potential upside as it plans the next phase of the works program at the Gold Links Project.

"Dateline maintains a healthy cash balance matched with a low-cost base with the vast majority of funds deployed in the ground. We look forward to progressing additional exploration initiatives this quarter and reporting assay results progressively over the coming months."

**About Dateline Resources Limited**

Dateline Resources Limited (ASX: DTR) is an Australian publicly listed company focused on gold mining and exploration in Colorado, United States of America. The Company owns 100% of the Gold Links project which is located in Gunnison County

The Gold Links is comprised of several contiguous historic gold mines that have been consolidated by the company. Gold Links has produced up to 150,000 oz of high-grade gold (see ASX announcement of 8 February 2019)

Mineralisation can be traced on surface and underground for almost 6km from the Northern to the Southern sections of the project. Well documented records indicate that there are large areas that remain untested at surface and little to no exploration has been done below the valley floor.

Dateline also owns the Lucky Strike and Mineral Hill permitted gold properties and has recommissioned a gold processing plant located at the Lucky Strike Mine. The Gold Links and the Lucky Strike are located approximately 50km apart.

**Competent Person's Statement**

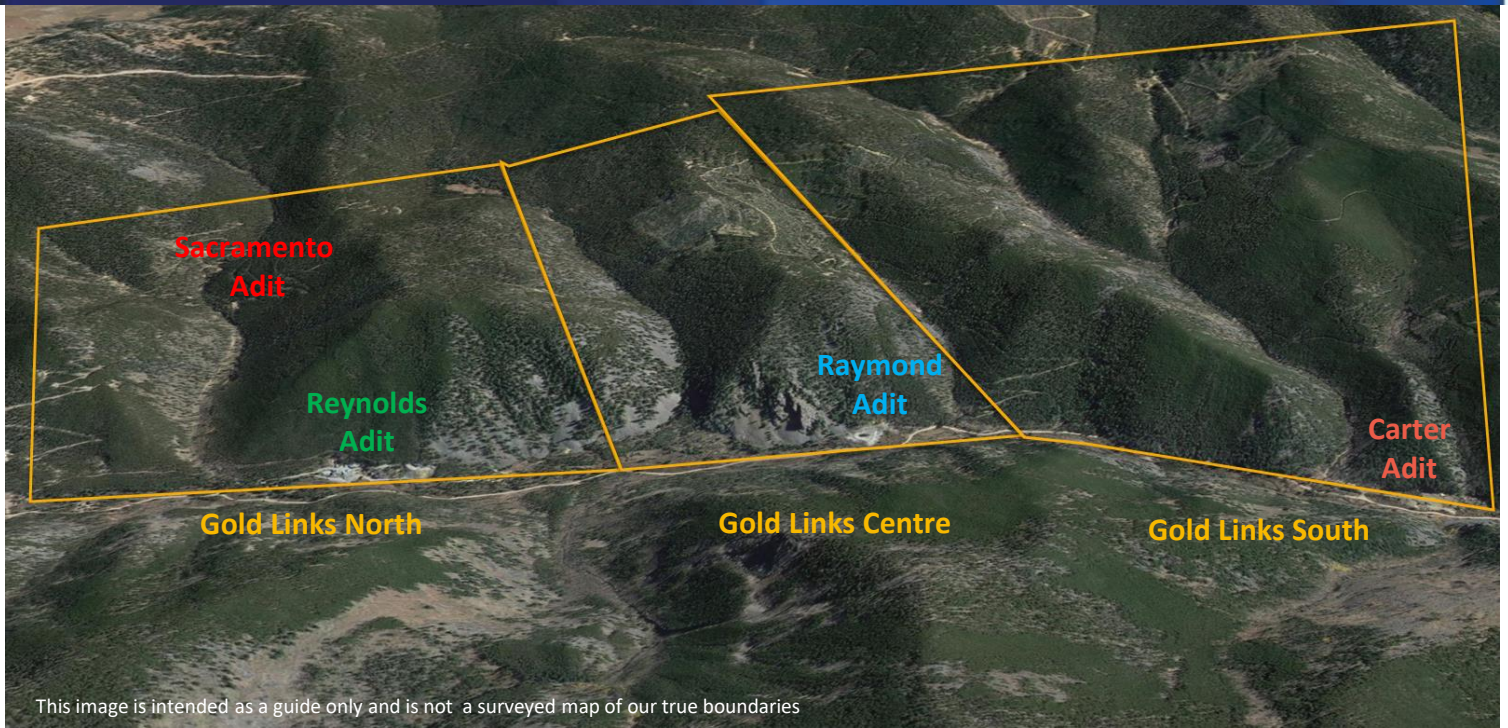

Exploration information in this announcement is based upon work reviewed by Mr Gregory Hall who is a Chartered Professional of Australasian Institute of Mining and Metallurgy (CP-IMM) and undertaken by L.J. Karr an employee of CRG Mining LLC which is a 100% owned subsidiary of Dateline Resources. Mr Gregory Hall has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a 'Competent Person' as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (JORC Code). Mr Gregory Hall is a non-executive Director of Dateline Resources Ltd and consents to the inclusion in the report of the matters based on their information in the form and context in which it appears.

**Forward Looking Statements**

This Announcement is provided on the basis that neither the Company nor its representatives make any warranty (express or implied) as to the accuracy, reliability, relevance or completeness of the material contained in the Announcement and nothing contained in the Announcement is, or may be relied upon as a promise, representation or warranty, whether as to the past or the future. The Company hereby excludes all warranties that can be excluded by law. The Announcement contains material which is predictive in nature and may be affected by inaccurate assumptions or by known and unknown risks and uncertainties and may differ materially from results ultimately achieved.

The Announcement contains "forward-looking statements". All statements other than those of historical facts included in the Announcement are forward-looking statements including estimates of Mineral Resources. However, forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, copper, gold and other metals price volatility, currency fluctuations, increased production costs and variances in ore grade recovery rates from those assumed in mining plans, as well as political and operational risks and governmental regulation and judicial outcomes. The Company does not undertake any obligation to release publicly any revisions to any "forward-looking statement" to reflect events or circumstances after the date of the Announcement, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. All persons should consider seeking appropriate professional advice in reviewing the Announcement and all other information with respect to the Company and evaluating the business, financial performance and operations of the Company.
