

ASX Announcement

20 November 2019

R3D Global to Market DigiCerts™ in the Philippines ***Revolutionary Certificate Issuance System Built on BCB Blockchain***

R3D Global (ASX: R3D) will unveil a revolutionary, next generation blockchain-based universal certification platform called DigiCerts™, with BCB Blockchain, at the 3rd National Technology Business Incubator (TBI) Summit, which is part of Philippine Startup Week 2019. R3D Global is also promoting a new pilot programme for issuing educational certificates to graduates on the blockchain network. Among the first institutions to onboard the programme are DSLU Animo Labs Foundation Inc., Siliman University, Samar State University and the University of Southeastern Philippines.

DigiCerts™ is the latest technology project embraced by R3D Global. It utilises BCB blockchain technology protocol, which is a secure and tamper-resistant platform. Users of DigiCerts™ are given ownership of their digital assets and will be able to share directly with anyone who requires access. The system replaces traditional paper-based certificates, providing security, permanence and accessibility while abating potential fraud cases.

“DigiCerts™ is powered by BCB Blockchain, a global robust and scalable blockchain system, to allow educational institutions to issue digital certificates as proof of achievement or completion. We are excited to partner BCB Blockchain and add value to the global certificate issuance process for the universities and their students,” said Florence Fang, CEO of R3D Global.

“The EduTech market is a huge opportunity with over 2,300 university and colleges in the Philippines alone,” she added.

“We are honoured to work with R3D Global and academic experts to ensure that each digital certificate issued is authentic and unaltered. The adoption of DigiCerts™ is an important step for the Philippine EduTech sector towards the fulfilment of the smart city vision,” said Douglas Gan, CEO and co-founder of BCB Blockchain.

Educational fraud is prevalent and one in four resumes contain inaccuracies about educational background¹. The global upsurge of educational fraud threatens to devalue higher education and undermines academic integrity whilst harming institutional reputations.

DigiCerts™ fosters security and trust without the need for an intermediary to validate transactions in the education sector. At the same time, it transforms job applications as DigiCerts™ allows employers to check on a new hire’s credentials through a secure registry of academic qualifications.

“The certificate that the University issues is proof of a student’s award and is a unique and valuable document. Every year, especially during the graduation period, the amount of time spent on preparing certificates and transcripts is laborious. Furthermore, requests for replacement certificates and transcripts can only be issued if the original certificate has been lost or damaged, and the University reserves the right not to issue a duplicate. Certificates are signed individually by an official in the University,” said Meddy Mangaring, Dean of the College of Engineering of Samar State University.

“With DigiCerts™ in place, we look forward to labour-savings and a fast, efficient and secure way to issue certificates that are the most valuable to a graduate,” he added.
