Las Bambas Copper mine to trial SciDev chemistry

Highlights

- **SciDev has received a trial order for its Maxiflox[®] chemistry from the Las Bambas copper mine in Peru. Las Bambas, owned by MMG Limited, is a copper porphyry operation producing c400,000 tonnes of copper per annum with an expected mine life of 20 years**

SciDev Limited (ASX:SDV; **SciDev**, or the **Company**) is pleased to advise that it has received a trial purchase order with MMG Limited, one of the world's leading diversified mining companies. The commercial trial will be conducted at the Las Bambas mine in Peru.

The commercial trial follows on from earlier successful technical evaluations that SciDev conducted during CY2019. SciDev's MaxiFlox[®] chemistries will be utilised in the tailings thickener at Las Bambas, with the aim of improving water recovery and ultimately increasing the available volume in the mines tailings storage facility.

Commenting on the transaction, SciDev Managing Director and CEO, Lewis Utting said:

"The order from MMG Limited at their Las Bambas operation represents SciDev's first entry into the copper sector in South America. With both water and available land at a premium in the region, SciDev's technology could add value to our customers. We are pleased that our chemistries are continuing to be recognised and trialled by global leading companies such as MMG Limited"

On behalf of SciDev Ltd
