

ASX RELEASE

17 January 2020

Kleos and Geolcollect Sign Channel Partner and Integrator Agreement

- **Kleos' Scouting Mission data to improve Geolcollect's dark vessel locating capability**
- **Geolcollect is a leader in geospatial intelligence and analysis**
- **Geolcollect's products are used by the UK's Royal Navy and other prominent global maritime organisations**
- **Kleos' footprint within the UK defence sector will be strengthened**

Kleos Space S.A (**ASX:KSS, Frankfurt:KS1, Kleos or Company**), a space-powered Radio Frequency Reconnaissance data-as-a-service (DaaS) company, has entered into a channel partner and data integrator agreement with UK geospatial intelligence and analysis company Geolcollect.

Under the agreement, Geolcollect will procure and integrate data from Kleos' satellites as it becomes a global leader in dark vessel tracking capability. Kleos data will be used by Geolcollect to generate analytical intelligence output and/or resold by them under the Channel Partner element of the agreement.

Once launched and commissioned, Kleos' Scouting Mission satellites will detect and geolocate maritime radio frequency transmissions, and when compared with other data sources such as Automatic Identification System (AIS) the data can be used to highlight 'dark' maritime activity.

Geolcollect provides near real-time geospatial maritime intelligence collection and analytics for the defence, security, global cruise line and insurance sectors that is used by leading maritime organisations. Comprehensive real-time vessel tracking is central to its extensive contracts with the UK's Royal Navy and within the Global P&I Maritime insurance sector, using its intelligence capabilities to support global maritime operations.

The Agreement specifies guide pricing in line with Kleos data integrator partner pricing for a team of EUR 300,000 per annum requiring a maximum of 5 users. Actual revenues are dependent on agreed licencing terms that are variable depending on data access and number of users required. Resale pricing will be negotiated on a case-by-case basis and is not fixed. The Agreement is for twelve months and can be renewed annually.

Kleos Space Chairman, Air Commodore (rtd) Peter Round who is a respected figure in the UK defence community said, "This is a great example of implementation of a key business strategy for Kleos: we can provide defence, security and commercial users with access to cost-effective geolocation intelligence

data to provide a value added tipping and cueing capability to their current capability. Kleos' independent maritime intelligence data complements and enhances Geollect's existing datasets. Using our satellites flown in clusters of four, our technology geolocates all RF (Radio Frequency) transmissions without relying on them actively broadcasting their locations. Thus, Kleos can offer unprecedented situational awareness at sea with optimised revisit rates over key regions of maritime interest for the UK, including the Straits of Hormuz, the South China Sea and the coast of Africa.

This agreement with an international leader in geospatial intelligence supports our long-term strategy within the UK defence and security markets, where our commercial satellites improve and verify intelligence, surveillance and reconnaissance (ISR) data to support maritime operations."

Geollect co-founder and Chief Operating Officer Richard Gwilliam, himself a highly experienced ex-Royal Navy intelligence officer said, "Our maritime defence and security customers, such as the Royal Navy, are increasingly requesting tracking of dark activity, facilitating improved detection and interdiction of illegal activity such as piracy and drug smuggling.

Kleos' data will improve our location of dark vessels, enabling us to identify anomalous activity and corroborate reports from disparate sources in near real-time. Our geospatial intelligence data and analysis allows our customers to understand regional threats as they occur and use that information to mitigate risks."

Kleos' Scouting Mission satellites are awaiting launch from Chennai, India, and after commissioning will commence data delivery.

This announcement has been authorised by Andy Bowyer, CEO of Kleos Space S.A.

About Kleos Space S.A.

Kleos Space S.A. (ASX: KSS) is a space enabled, activity-based intelligence, data as a service company based in Luxembourg. Kleos Space aims to guard borders, protect assets and save lives by delivering global activity-based intelligence and geolocation as a service. The first Kleos Space satellite system, known as Kleos Scouting Mission (KSM), will deliver commercially available data and perform as a technology demonstration. KSM will be the keystone for a later global high capacity constellation. The Scouting Mission will deliver targeted daily services with the full constellation delivering near-realtime global observation – www.kleos.space.

About Geollect Limited.

Geollect are an award winning, highly respected Geospatial Intelligence company, providing a synthesis of cutting-edge data feeds with proven advanced geospatial analysis. they create proprietary, dynamic algorithms within user-friendly software to deliver a new form of timely and actionable intelligence. their products and services support critical decision-making by military and business leaders, providing them an operational advantage over their competition, while allowing them to lower operational risk and increase efficiencies.

The company is comprised of experienced professionals, formerly of the UK and US Intelligence Communities with advanced geospatial and intelligence analytic capabilities who maintain global professional networks. www.geollect.com
