SciDev chemistry to be trialled by Fortescue Metals Group Ltd

SciDev Limited (ASX:SDV; **SciDev**, or the **Company**) is pleased to announce that it will participate in a commercial trial with Fortescue Metals Group Limited (ASX:FMG; Fortescue), one of the world's leading producers of iron ore. The trial will be conducted at Fortescue's Solomon Hub, located in the Pilbara region of Western Australia.

SciDev progressed through a competitive tender process and have been invited to participate in a one-week field qualification trial, representing A\$60,000 in revenue. The field qualification will focus on the performance of the MaxiFlox[®] chemistry under plant operating conditions.

Commenting on the field qualification, SciDev Managing Director and Chief Executive Officer, Lewis Utting said: *"The agreement with Fortescue further extends the presence of SciDev chemistry and services across major mining projects in Australia. With water being a premium commodity in the Pilbara, SciDev's technology can add real benefit to our customers as well as reduce their environmental footprint. The continued growth of SciDev and our ability to work with and service major mining companies such as Fortescue highlights the caliber of the SciDev team in executing the technical and commercial evaluations with our customers."*

This release has been approved by the SciDev board.
