

ASX Announcement

27^h April 2022

Mt Finnerty and Parker Dome update

Westar Resources Limited (ASX: **WSR**) (**Westar** or the **Company**) refers to the exploration results reported by Ramelius Resources Ltd (Ramelius, ASX: RMS) for the Mt Finnerty and Parker Dome project in their quarterly activity report released on 27 April 2022.

The Mt Finnerty and Parker Dome JV Project are subject to a farm-in joint venture agreement with Rouge Resources Ltd (a wholly owned subsidiary of Westar Resources Ltd.). Ramelius can earn 75% of the projects by expenditure of A\$2M over a three-year period. Mt Finnerty is located approximately 200km northeast of Edna May, Parker Dome is situated approximately 150km south-east of Edna May.

Ramelius completed a 42-hole AC programme in late 2021, which tested a further 2km strike extent to the south of the Tasman Prospect.

As commented previously (RMS ASX announcement 28 January 2022, “**December 2021 Quarterly Activities Report**”) “*Drilling typically indicates a 40-50m deep, near-surface depletion zone in residual saprolitic clays. Until recently, the historic higher grade results were considered to be sporadic and discrete supergene enriched zones. Recent RC drilling targeted areas of best previous anomalism, with new intersections demonstrating deeper primary hosted mineralisation.*”

Shareholders should refer to the Ramelius announcement for further details.

For the purpose of Listing Rule 15.5, this announcement has been authorised by the board of Westar Resources Ltd.

ABOUT WESTAR RESOURCES

Westar Resources (ASX:WSR) is a Perth-based mineral exploration company focused on creating value for shareholders through the development of high-quality gold and base metal assets in Western Australia. Westar's projects are strategically located in highly prospective parts of some of WA's most prolific goldfields including Sandstone, Mt Magnet, Southern Cross and Nullagine. The Company's strategy is to apply a systematic approach to the assessment and prioritisation of its projects, all of which have the potential to produce material discoveries.
