**SSE Thermal awards contract for low-carbon power station**

SSE Thermal (SSE), a division of SSE plc, has awarded a contract for the development of a proposed low-carbon power station located in Peterhead, Scotland. The contract has been awarded to a consortium of Worley, Mitsubishi Heavy Industries Group and Tecnicas Reunidas (“the Consortium”).

The power station, equipped with associated carbon capture technology, is being developed by SSE Thermal and Equinor and will potentially be the first of its kind in Scotland. The power station will connect to the Scottish Cluster’s CO<sub>2</sub> transport and storage infrastructure, which supports the UK’s target of net-zero emissions by 2050. Carbon capture units will be integrated into a power turbine island with a generating capacity of up to 910 megawatts, removing up to 1.5 million tonnes of CO<sub>2</sub> emissions every year. The power station is expected to be operational by 2027.

Under the contract, the Consortium will provide front-end engineering design (FEED) services. Worley will provide project management, engineering and design services to integrate the carbon capture technology with the power turbine island.

Worley’s services will be executed by its UK and Global Integrated Delivery (GID) teams.

“This collaboration between the Consortium, SSE Thermal and Equinor is a significant step towards UK achieving net-zero by 2050 by decarbonizing industrial clusters, and it aligns to Worley’s purpose of delivering a more sustainable world,” said Chris Ashton, Chief Executive Officer of Worley.

Authorized for release by Nuala O’Leary, Group Company Secretary.
