Sydney – 27 July 2022 – [BrainChip Holdings Ltd](#) (ASX: **BRN**, OTCQX: **BRCHF, BHPY**), the world's first commercial producer of neuromorphic artificial intelligence chips, today provides the Quarterly Activities Report in conjunction with its Appendix 4C lodged for the quarter ending 30 June 2022.

CEO Statement

The recently ended Quarter amplified the execution of the Company's commercialisation for our Akida™ neuromorphic IP. During the June quarter, BrainChip introduced a complete company rebrand, reinforcing Essential AI: Optimizing compute. We continued to engage in meaningful technical evaluations with multiple target customers, and we announced key commercial partnerships with strategic technology (Arm, SiFive & Prophesee) and AI software leaders (Edge Impulse & NVISO), demonstrating pre-integration and interoperability.

During the June Quarter BrainChip was added to the S&P ASX200 Index, a major global index. This is a significant event, as it recognises the Company's strong growth over the previous 12 months and raises the Company's profile with institutional investors around the world.

In the coming quarter, the Company will be focused on deepening existing customer relationships and converting technical evaluations. In addition, the Company continues to invest in development of next-generation Akida IP and products to extend our technological lead.

FINANCIAL UPDATE

About BrainChip Holdings Ltd (ASX: BRN)

BrainChip is a global technology company that is producing a groundbreaking neuromorphic processor that brings artificial intelligence to the edge in a way that is beyond the capabilities of other products. The chip is high performance, small, ultra-low power and enables a wide array of edge capabilities that include on-chip training, learning and inference. The event-based neural network processor is inspired by the spiking nature of the human brain and is implemented in an industry standard digital process. By mimicking brain processing BrainChip has pioneered a processing architecture, called Akida™, which is both scalable and flexible to address the requirements in edge devices. At the edge, sensor inputs are analyzed at the point of acquisition rather than through transmission via the cloud to a data center. Akida is designed to provide a complete ultra-low power and fast AI Edge Network for vision, audio, olfactory and smart transducer applications. The reduction in system latency provides faster response and a more power efficient system that can reduce the large carbon footprint of data centers.
