

HIGH-GRADE INTERCEPTS AT EL REFUGIO, COPALQUIN DISTRICT, MEXICO

Highlight Results

- **High-grade gold-silver intercepts at the eastern end of the El Refugio resource area, on sections 200 to 360**
 - **7.00m @ 3.40 g/t gold, 227 g/t silver** from 185.0m, **(CDH-143)**, including **3.00m @ 6.49 g/t gold, 454 g/t silver** from 189.0m, plus **4.70m @ 0.42 g/t gold, 41.0 g/t silver** from 218.0m
 - **4.00m @ 2.27 g/t gold, 170 g/t silver** from 106.0m, **(CDH-146)**, plus **Shallower intercepts of 1m up to 3.27g/t AuEq¹**
 - **2.50m @ 2.71 g/t gold, 125 g/t silver** from 71.5m, **(CDH-147)**
- **The drill results in the eastern end of El Refugio are important in demonstrating gold-silver mineralisation in the structure up dip and closer to a potential interaction with the high-grade La Soledad structure as well as adding to the resource footprint**
- **A drill core relogging programme is underway which will enhance resource modelling work and drill program design for La Soledad-El Refugio and expansion east to Los Pinos**
- **Study work is progressing to optimise an initial development at the highly attractive maiden high-grade gold-silver resource at El Refugio**
- **Having invested over US\$8m in direct exploration costs, Mithril has earned 50% interest in the Copalquin concessions as part of its exclusive option term to purchase 100% ownership, which extends by a further 3 years to August 2026**

Mithril Resources Ltd (ASX: MTH) (**Mithril** or the **Company**) is pleased to provide exploration results for its 100% optioned Copalquin Gold Silver Project in Mexico where a maiden 529koz gold equivalent¹ high-grade gold-silver JORC resource has been defined at El Refugio-La Soledad *(see ASX announcement 17 November 2021)

Mithril CEO and Managing Director, John Skeet, commented:

"The recent program of drilling at El Refugio has successfully extended and upgraded confidence both west and now east of the central El Refugio maiden resource area. Drilling continually intercepts high-grade mining widths as we progress work in this important part of the Copalquin Mining District. The drill core relogging program applying the past two years of drilling experience is opening up interpretation and opportunities, particularly for the more complex and high-grade La Soledad part of the maiden resource area and the eastern extension to Los Pinos. Drill core observations from the recent drilling point to significant ongoing resource depth potential for the major upwelling feeder zone at El Refugio as we progress the exploration program and development scenarios at Copalquin for resource expansion and gold-silver production.

¹ see page 8 for JORC MRE details and AuEq calculation

El Refugio Drilling June-July 2022

Assay results have been received for the drilling completed on the eastern end of the El Refugio resource area. Importantly, core from these most recent holes have the first observed occurrences of platy quartz after calcite, a texture indicative of boiling and gold deposition. Late amethyst is also observed filling what was open space at the time of mineralisation. This texture is indicative of boiling. Visible silver minerals are commonly observed in the mineralised veins. Assay results include **7.00m @ 3.40 g/t gold, 227 g/t silver** from 185.0m, **(CDH-143)**, including **3.00m @ 6.49 g/t gold, 454 g/t silver** from 189.0m, plus **4.70m @ 0.42 g/t gold, 41.0 g/t silver** from 218.0m. **4.00m @ 2.27 g/t gold, 170 g/t silver** from 106.0m, **(CDH-146)**, plus shallower intercepts of 1m up to 3.27g/t AuEq and **2.50m @ 2.71 g/t gold, 125 g/t silver** from 71.5m, **(CDH-147)**.

The recent drilling at El Refugio has successfully intercepted the main structure and given further direction for future drilling to target the projected main upwelling feeder zone of the El Refugio hydrothermal system.

El Refugio Drilling May-June 2022

In May-June 2022, a program of six drill holes at El Refugio was completed, with three drilled from a location slightly oblique to the main structure, in order to reduce the length of the drill holes to reach the targeted depth. The program successfully achieved the objective of locating the main structure and confirming high-grade gold and silver on the western side of the El Refugio resource area while providing additional information for the location of the upwelling feeder zone. The previously reported intercept in hole CDH-137 of **5.67m @ 4.37 g/t gold, 174g/t silver** from 331.33m, **(CDH-137)**, including **1.67m @ 9.64 g/t gold, 399 g/t silver** from 331.33 plus **1.00m @ 1.68 g/t gold, 67.2 g/t silver** from 367.0m and **1.00m @ 1.27 g/t gold, 46.1 g/t silver** from 370.0m filled a gap down dip on section 560 and drill hole CDH-136 confirms the downdip extension with some further high-grade gold and silver mineralisation and multiple intercepts.

The first drill holes on section 800 were reported with exceptional high-grade gold and silver intercepts in this western side of the El Refugio resource area with **5.83m @ 15.7 g/t gold, 474 g/t silver** from 91.77m, **(CDH-140)**, including **1.81m @ 45.5 g/t gold, 1,387 g/t silver** from 93.77m down dip of hole CDH-139 (Figure 7). This supports the high-grade previously intercepted 40m west by drill hole **CDH-094** with **18.87m @ 9.67g/t gold, 279g/t silver**.

Core Relogging Program

The core relogging program is underway for La Soledad and El Refugio drilling which will enable the geologic interpretation to be updated using the most recent knowledge developed for this important part of the Copalquin Mining District. This information is being used to update the database and to further develop the geologic model for design of the next round of drilling to continue to develop this significant deposit, aiming to extend the resource growth deeper and towards a possible interaction between the main El Refugio and La Soledad structures.

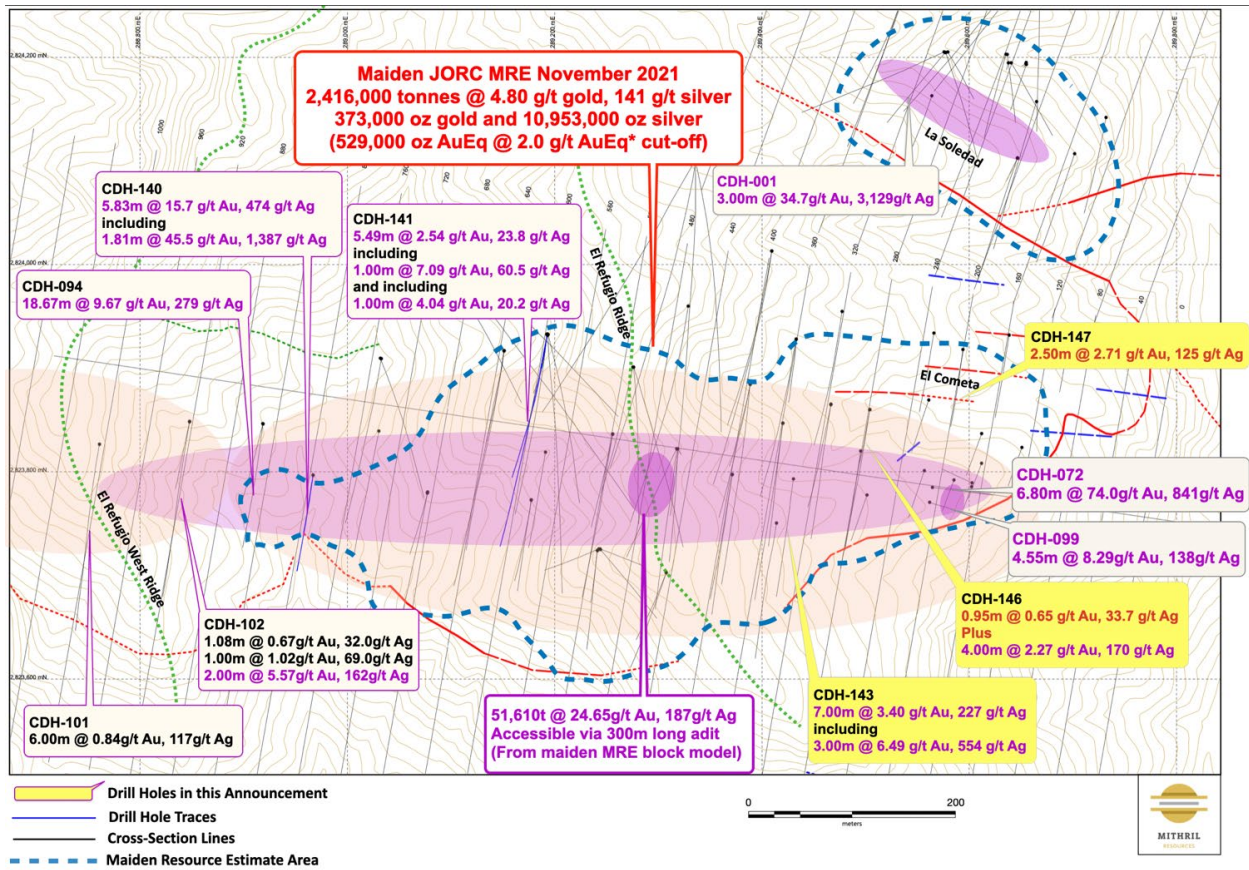

Figure 1 – Plan view at El Refugio – La Soledad showing the maiden JORC MRE area, drill traces and section lines with the locations of the drill intercepts for drill holes CDH-143, CDH-146 and CDH-147 reported in this announcement.

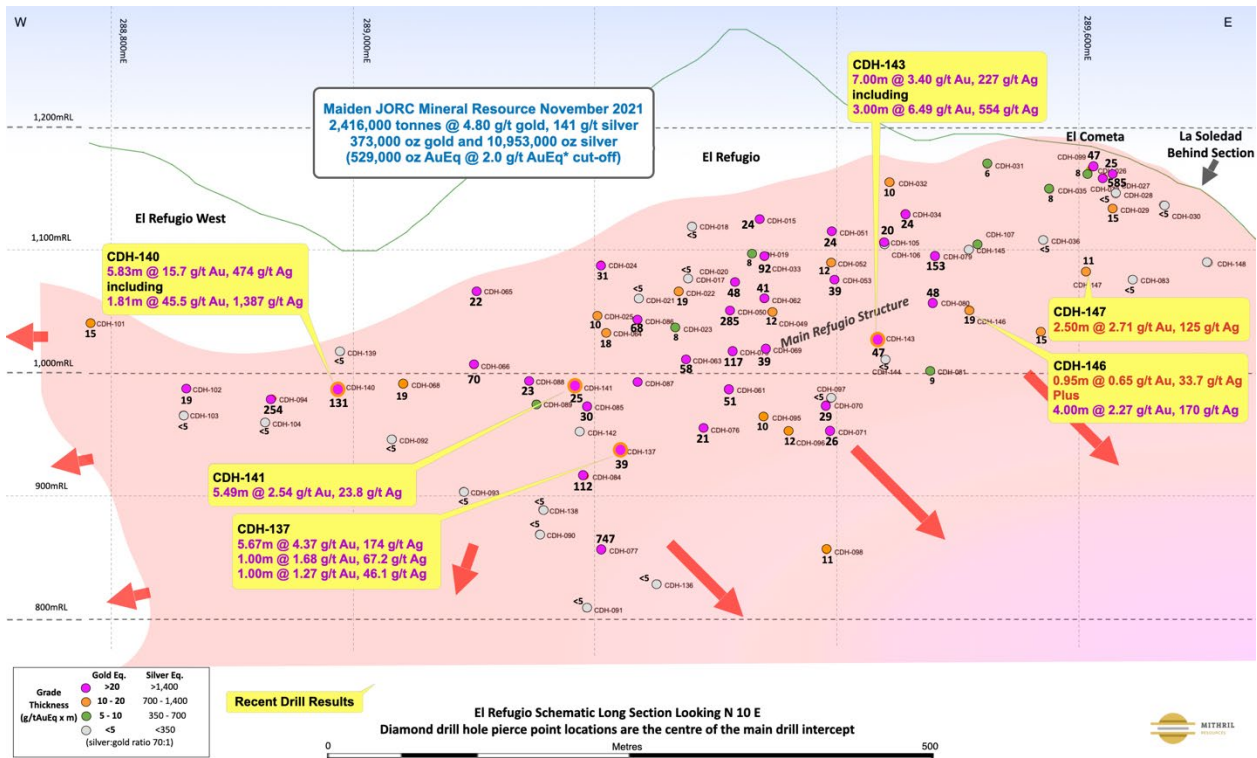

Figure 2 – Schematic long section for El Refugio showing the drill hole pierce points and the details of the recent drilling. Arrows highlighting the direction for resource expansion drilling.

Figure 3 – Cross section 200 showing the intercept in the eastern most drilling with a good relatively near surface intercepts in the El Refugio vein. Further drilling required to follow-up this intercept

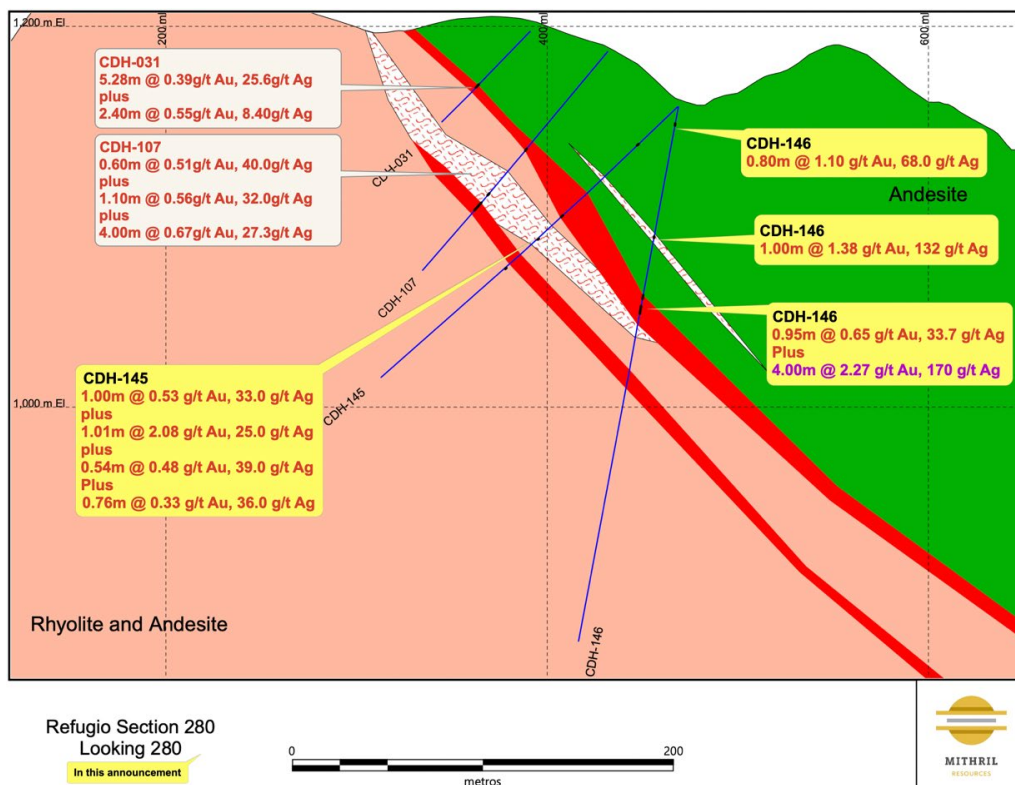

Figure 4 – Cross section 280 showing the well developed El Refugio structure hosting multiple gold-silver bearing veins with higher grades developing with the deeper intercept in CDH-146

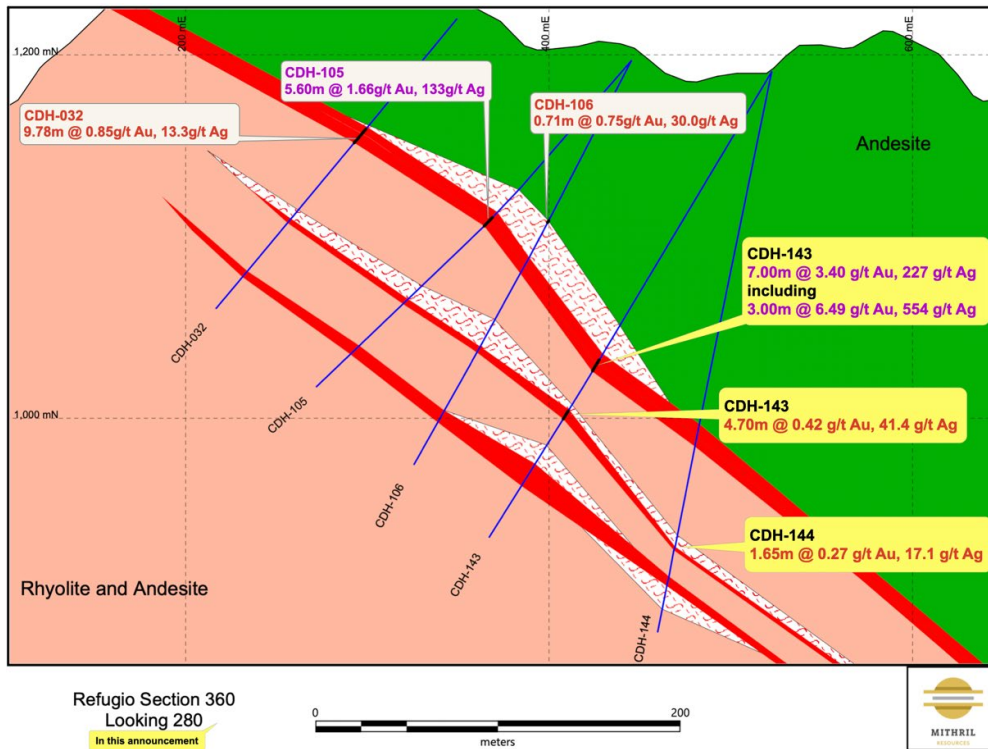

Figure 5 – Cross section 360 showing the multiple veins of the El Refugio structure with high-grade intercepts relatively near to the surface. Further drilling down dip to follow-up.

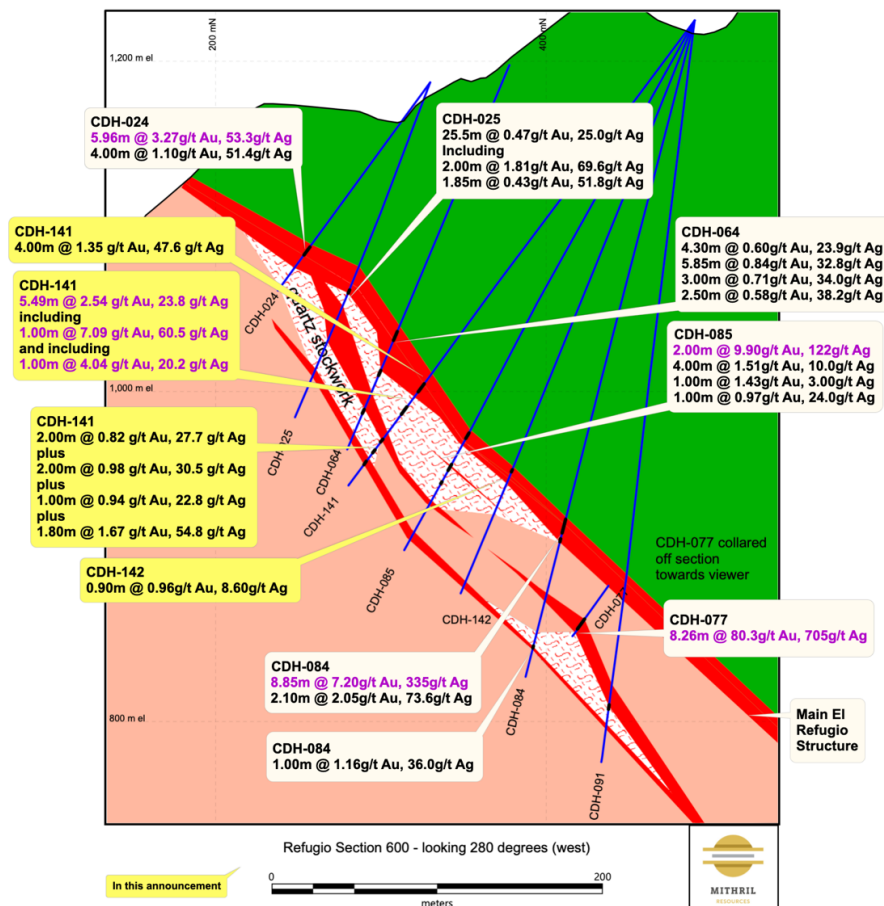

Figure 6 – Cross section 600 showing the well developed El Refugio structure which hosts multiple gold-silver bearing veins including very high-grade grades

Figure 7 - Cross section 800 where the first drill holes have been completed at the western side of the El Refugio resource area with very high-grade gold and silver developing down dip and one section east of the high-grade CDH-094 intercept.

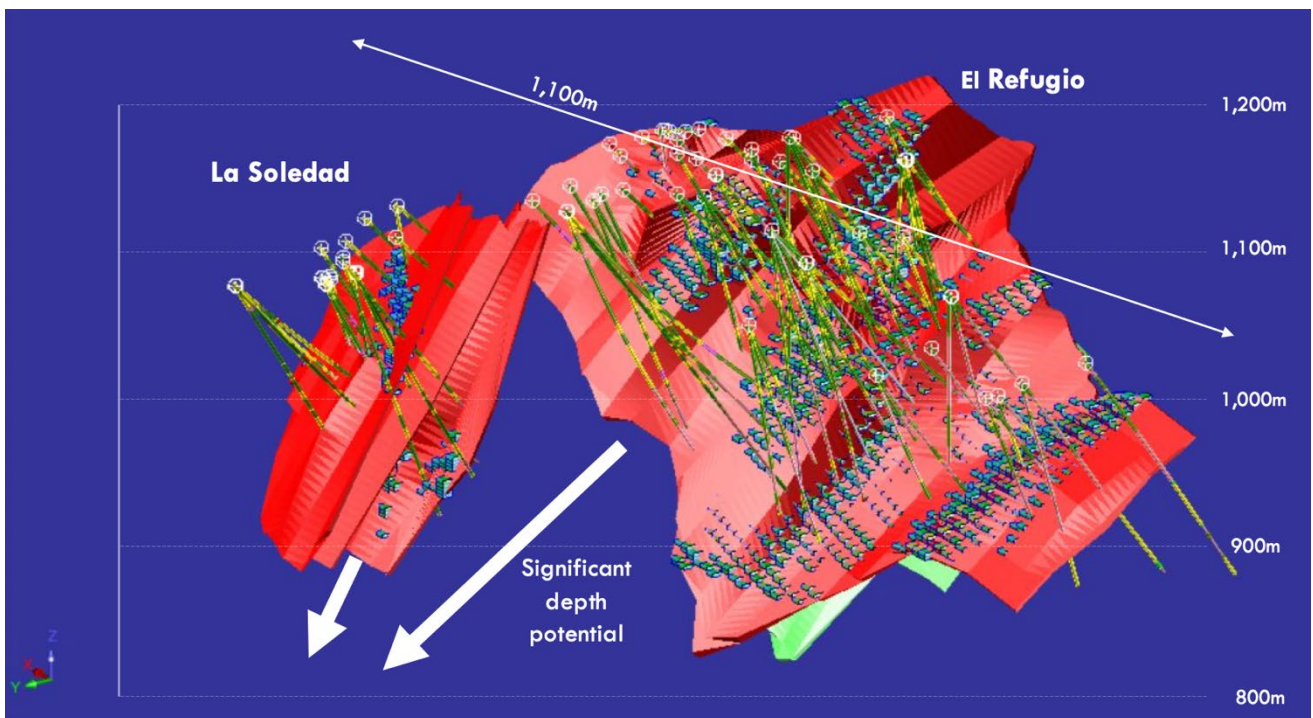

Figure 8 - Oblique long section showing the La Soledad and El Refugio vein models with drill hole traces and resource block model. Scale and elevations are approximate.

The above figure shows an oblique view of the La Soledad-El Refugio vein and block models with traces of drill holes to date. Recent drill logs and results show significant depth potential of this major system and also indicate the general

location of the El Refugio upwelling feeder zone and this is consistent with the epithermal gold-silver model shown in the figure below and further supported by the recent drill log observations.

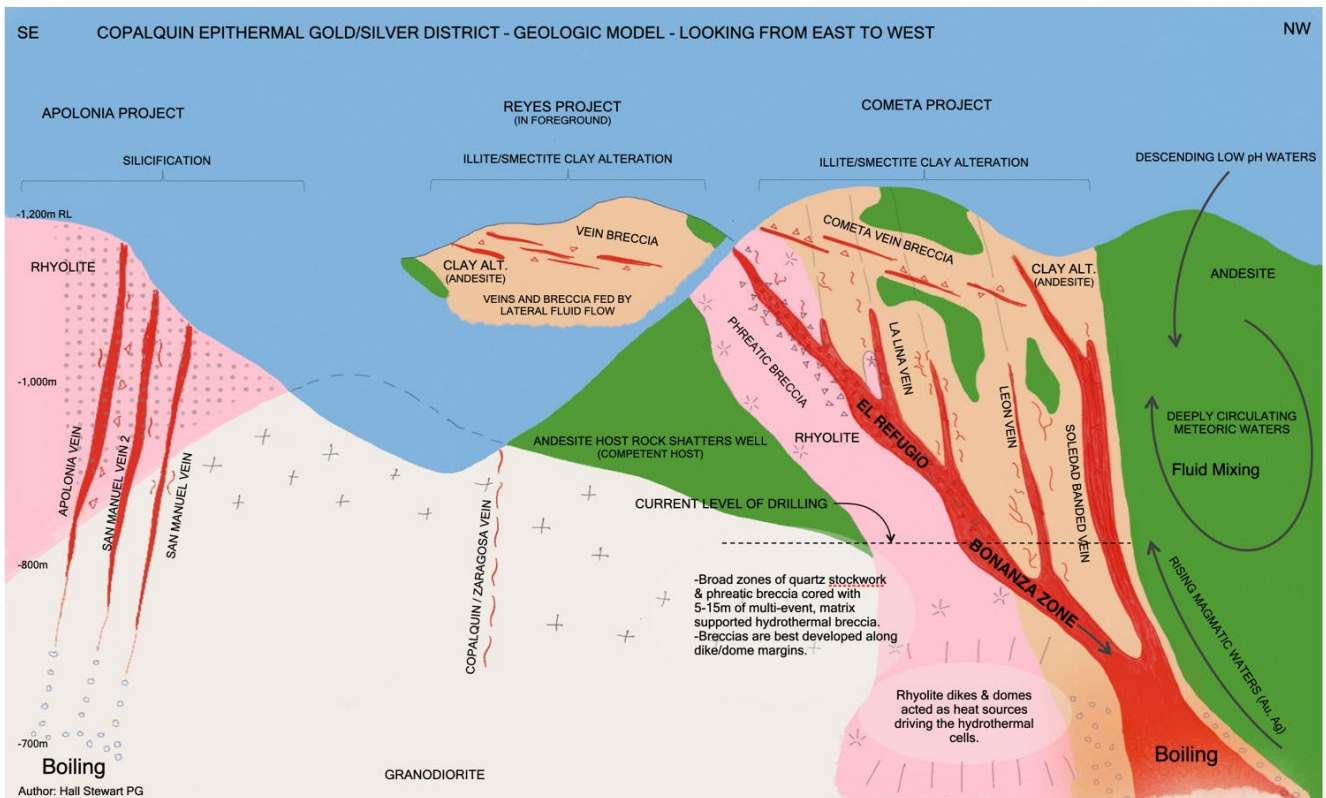

Figure 9 - Copalquin District Geologic Model for epithermal gold/silver - geologic model (author: Hall Stewart PG, Chief Geologist)

Scoping Study Work

Work is progressing to assess the first stage development options to optimally exploit the high-grade El Refugio resource. Recent drilling has been spaced across the strike of the mineralized zone to infill strategic areas. There are options to reduce the mine development meterage and to take advantage of topography and high-grade zones within the El Cometa-El Refugio resource on the eastern side of the deposit to potentially produce attractive development economics including low initial capital requirements and short payback period. Mining

ABOUT THE COPALQUIN GOLD SILVER PROJECT

The Copalquin mining district is located in Durango State, Mexico and covers an entire mining district of 70km² containing several dozen historic gold and silver mines and workings, ten of which had notable production. The district is within the Sierra Madre Gold Silver Trend which extends north-south along the western side of Mexico and hosts many world-class gold and silver deposits.

Multiple mineralisation events, young intrusives thought to be system-driving heat sources, widespread alteration together with extensive surface vein exposures and dozens of historic mine workings, identify the Copalquin mining district as a major epithermal centre for Gold and Silver.

Within 15 months of drilling in the Copalquin District, Mithril delivered a maiden JORC mineral resource estimate demonstrating the high-grade gold and silver resource potential for the district. This maiden resource is detailed below (see ASX release 17 November 2021).

- **2,416,000 tonnes @ 4.80 g/t gold, 141 g/t silver for 373,000 oz gold plus 10,953,000 oz silver (Total 529,000 oz AuEq*) using a cut-off grade of 2.0 g/t AuEq***
- **28.6% of the resource tonnage is classified as indicated**

	Tonnes (kt)	Tonnes (kt)	Gold (g/t)	Silver (g/t)	Gold Equiv.* (g/t)	Gold (koz)	Silver (koz)	Gold Equiv.* (koz)
El Refugio	Indicated	691	5.43	114.2	7.06	121	2,538	157
	Inferred	1,447	4.63	137.1	6.59	215	6,377	307
La Soledad	Indicated	-	-	-	-	-	-	-
	Inferred	278	4.12	228.2	7.38	37	2,037	66
Total	Indicated	691	5.43	114.2	7.06	121	2,538	157
	Inferred	1,725	4.55	151.7	6.72	252	8,414	372
	TOTAL	2,416	4.80	141	6.81	373	10,953	529

Table 1 - Mineral resource estimate El Refugio – La Soledad using a cut-off grade of 2.0 g/t AuEq*

*AuEq. = gold equivalent calculated using and gold:silver price ratio of 70:1. That is, 70 g/t silver = 1 g/t gold. The metal prices used to determine the 70:1 ratio are the cumulative average prices for 2021: gold USD1,798.34 and silver: USD25.32 (actual is 71:1) from kitco.com. Actual metal prices have not been used in resource estimate, only the price ratio for the AuEq reporting.

Mining study and metallurgical test work supports the development of the El Refugio-La Soledad resource with conventional mining methods indicated as being appropriate and with high gold-silver recovery to produce metal on-site with conventional processing.

Mithril is currently exploring in the Copalquin District to expand the resource footprint in 2022 to demonstrate its multi-million ounce gold and silver potential.

Mithril Resources is earning 100% interest in the Copalquin District mining concessions via a purchase option agreement detailed in ASX announcement dated 25 November 2019.

Competent Persons Statement

The information in this report that relates to sampling techniques and data, exploration results and geological interpretation has been compiled by Mr Hall Stewart who is Mithril's Chief Geologist. Mr Stewart is a certified professional geologist of the American Institute of Professional Geologists. This is a Recognised Professional Organisation (RPO) under the Joint Ore Reserves Committee (JORC) Code.

Mr Stewart has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Stewart consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

The information in this report that relates to metallurgical test results, mineral processing and project development and study work has been compiled by Mr John Skeet who is Mithril's CEO and Managing Director. Mr Skeet is a Fellow of the Australasian Institute of Mining and Metallurgy. This is a Recognised Professional Organisation (RPO) under the Joint Ore Reserves Committee (JORC) Code.

Mr Skeet has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Skeet consents to the inclusion in this report of the matters based on information in the form and context in which it appears. The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

Table 2 – Drill intercepts table for drilling at El Refugio – La Soledad

JORC Code, 2012 Edition – Table 1

Section 1 Sampling Techniques and Data

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information. 	<ul style="list-style-type: none"> Samples for the Copalquin, Mexico drill programs consist of ½ HQ core cut lengthwise with a diamond saw. Intervals are nominally 1 m but may vary between 1.5 m to 0.5 m based on geologic criteria. Deeper portions of holes from CDH-075 onward consist of ½ NQ core. Sample sizes are tracked by core diameter and sample weights. The same side of the core is always sent to sample (left side of saw). Reported intercepts are calculated as either potentially underground mineable (below 120m below surface) or as potentially open-pit mineable (near surface). Potentially underground mineable intercepts are calculated as length weighted averages of material greater than 1 g/t AuEQ_70 allowing up to 2m of internal dilution. Potentially open-pit mineable intercepts are calculated as length weighted averages of material greater than 0.25 g/t AuEQ_70 allowing for up to 2m of internal dilution. 2021 soil sampling has been carried out by locating pre-planned points by handheld GPS and digging to below the first colour-change in the soil (or a maximum of 50 cm). In the arid environment there is a 1 – 10 cm organic horizon and a 10 – 30 cm B horizon above the regolith. Samples are sieved to -80 mesh in the field. A 15 g aliquot of sample is split from the soil "pulp" for analysis by X-Ray fluorescence (XRF). Mithril uses an Olympus Vanta 50kV X-Ray fluorescence analyser with a lower detection limit for silver of 2 ppm. Rock chip sampling is done with hammer and chisel along continuous chip lines oriented perpendicular to the mineralized structure. The samples are as representative as possible.
Drilling techniques	<ul style="list-style-type: none"> Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc). 	<ul style="list-style-type: none"> Drilling is done with an MP500 man-portable core rig capable of drilling HQ size core to depths of 400 m. Core is recovered in a standard tube. Less than 7% of the total core drilled is NQ size core (as of 2022-01-15).
Drill sample recovery	<ul style="list-style-type: none"> Method of recording and assessing core and chip sample recoveries and results assessed. 	<ul style="list-style-type: none"> Drill recovery is measured based on measured length of core divided by length of drill run. Recovery in holes CDH-001 through CDH-025 and holes CDH-032 through CDH-077 was always above 90% in the mineralized

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. 	<p>zones. Detailed core recovery data are maintained in the project database.</p> <ul style="list-style-type: none"> Holes CDH-026 through CDH-031 had problems with core recovery in highly fractured, clay rich breccia zones. There is no adverse relationship between recovery and grade identified to date.
Logging	<ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. The total length and percentage of the relevant intersections logged. 	<ul style="list-style-type: none"> Core samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Core logging is both qualitative or quantitative in nature. Photos are taken of each box of core before samples are cut. Core is wetted to improve visibility of features in the photos. All core has been logged and photographed.
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. For all sample types, the nature, quality and appropriateness of the sample preparation technique. Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled. 	<ul style="list-style-type: none"> Core is sawn and half core is taken for sample. Samples are prepared using ALS Minerals Prep-31 crushing, splitting and pulverizing. This is appropriate for the type of deposit being explored. Visual review to assure that the cut core is ½ of the core is performed to assure representativity of samples. field duplicate/second-half sampling is undertaken for 3% of all samples to determine representativity of the sample media submitted. Sample sizes are appropriate to the grain size of the material being sampled.
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and 	<ul style="list-style-type: none"> Samples are assayed for gold using ALS Minerals Au-AA25 method a 30 g fire assay with an AA finish. This is considered a total assay technique. Samples are assayed for silver using ALS Minerals ME-ICP61 method. Over limits are assayed by AgOG63 and AgGRAV21. These are considered a total assay technique. Standards, blanks and duplicates are inserted appropriately into the sample stream. External laboratory checks will be conducted

Criteria	JORC Code explanation	Commentary																																																																																																														
Data aggregation methods	<ul style="list-style-type: none"> In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated. Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated. 	<ul style="list-style-type: none"> Intercepts are reported for all intercepts greater than or equal to 1 g/t AuEQ_70 using a 70:1 Silver to gold price ratio. No upper cut-off is applied to reporting intercepts. Length weighted averaging is used to report intercepts. The example of CDH-002 is shown. The line of zero assays is a standard which was removed from reporting. <table border="1"> <thead> <tr> <th>Au raw</th> <th>Ag raw</th> <th>Length (m)</th> <th>Au *length</th> <th>Ag *length</th> <th></th> <th></th> <th></th> <th></th> <th></th> </tr> </thead> <tbody> <tr> <td>7.51</td> <td>678</td> <td>0.5</td> <td>3.755</td> <td>339</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>11.85</td> <td>425</td> <td>0.55</td> <td>6.5175</td> <td>233.75</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>0.306</td> <td>16</td> <td>1</td> <td>0.306</td> <td>16</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>0.364</td> <td>31.7</td> <td>1</td> <td>0.364</td> <td>31.7</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>3.15</td> <td>241</td> <td>0.5</td> <td>1.575</td> <td>120.5</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>10.7</td> <td>709</td> <td>0.5</td> <td>5.35</td> <td>354.5</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>15.6</td> <td>773</td> <td>0.5</td> <td>7.8</td> <td>386.5</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td>From</td> <td>To</td> <td>Length</td> <td>Au gpt</td> <td>Ag gpt</td> </tr> <tr> <td></td> <td></td> <td>4.55</td> <td>25.6675</td> <td>1481.9</td> <td>91.9</td> <td>96.5</td> <td>4.55</td> <td>5.64</td> <td>325.70</td> </tr> </tbody> </table> <ul style="list-style-type: none"> Metal equivalent grades are reported using a 70:1 silver to gold price ratio. Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known'). 	<ul style="list-style-type: none"> True widths at Refugio between sections 120 and 1,000 vary according to the hole's dip. Holes drilled at -50 degrees may be considered to have intercept lengths equal to true-widths, Holes drilled at -70 degrees have true widths approximately 92% of the reported intercept lengths and holes drilled at -90 degrees have true widths of 77% of the reported intercept lengths. True widths are not known at La Soledad and downhole intercepts are reported. 																																																																																																														

Criteria	JORC Code explanation	Commentary
Diagrams	<ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. 	 <p>Drill hole location map showing DH traces - Copalquin Project, Durango, Mexico</p>
Balanced reporting	<ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. 	<ul style="list-style-type: none"> All exploration results are reported.
Other substantive exploration data	<ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. 	<ul style="list-style-type: none"> No additional exploration data are substantive at this time. Metallurgical test work on drill core composite made of crushed drill core from the El Refugio drill hole samples has been conducted. The samples used for the test work are representative of the material that makes up the majority of the Maiden Resource Estimate for El Refugio release on 17th November 2021. The test work was conducted by SGS laboratory Mexico using standard reagents and test equipment.

Criteria	JORC Code explanation	Commentary
<i>Further work</i>	<ul style="list-style-type: none"> • <i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</i> • <i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i> 	<ul style="list-style-type: none"> • Exploration results from the Copalquin District reporting in this release.
