Investor highlights

Metals-focused - NMR is exploring for critical commodities including copper, nickel, gold, REE, PGE, cobalt and lithium in WA and QLD and is already achieving short-term success

Early investor opportunity - Multiple near-term opportunities for discovery driven by strong drilling and exploration pipeline planned over coming months

Results-motivated management team - Solid capital structure combined with highly experienced and motivated management team

Focus on quickly advancing priority targets - Diamond drilling campaign underway in Nullarbor region of WA where NMR discovered IOCG-style alteration in its first drill hole

World Class Asset Portfolio

Focus on key commodities Copper and Gold in both proven and new deposit-hosting terrains

Nullarbor Project Western Australia

*Actively exploring for IOCG and related-style
mineralisation (e.g. Ernest Henry type –
Evolution Mining)*

300000E

400000E

Nullarbor Project Summary

EARLY EXPLORER ADVANTAGE - NMR is the leader in this exciting new, and rapidly developing region. NMR have already discovered the first ever IOCG-style alteration.

PRIME EXPLORATION GROUND - Three granted tenements and two applications totalling 1303km² of prime exploration ground.

ALREADY GENERATING EXCITING RESULTS - NMR have completed two drill holes and currently finishing the third hole due for completion at the end of August 2022.

- (1) Helios Phase 1 drilling (DDH_001) in March 2022,
- (2) Central drilling (DDHC_003) in Aug 2022 and both have identified significant alteration typically associated with mineralisation and ore deposits.
- (3) Currently drilling Helios Phase 2 (DDH_002)

Nullarbor Project Summary

GOVERNMENT SUPPORT FOR DRILLING AND EXPLORATION - \$220,000 government grant awarded to NMR to drill second hole at Helios on the back of results from Helios_DD001 containing pervasive IOCG-style alteration.

MORE POSITIVE RESULTS FROM GRAVITY SURVEY - A high-resolution ground-based gravity survey was completed in May 2022 which used to pinpoint the target for the second diamond drill hole (DDH_002).

NMR ARE LEADERS IN EXPLORATION ON THE NULLARBOR - Helios Second drill hole (HELIOS_DD002) an 800m diamond hole is currently ongoing and forecast to complete by end Aug 2022.

EARLY ACQUISITION OF THE BEST TARGETS - First explorer advantage in rapidly developing and increasingly competitive frontier terrain

*IOCG-style hematite
alteration in drill core
HELIOS_DD001*

Nullarbor Project – Current Exploration

HELIOS Project Area

Structurally controlled IOCG-style target

- **IOCG-style alteration already identified.**
- **Phase 1 geophysics and drilling completed.**
- **Phase 2 follow-up 800m Drilling Ongoing (expected completion late August 2022).**
- **Preliminary photos of drill core already published.**

CENTRAL Project Area

IOCG/Porphyry/Skarn target in a similar setting to Olympic Dam

- **Phase 1 diamond drilling just completed, significant alteration identified**
- **Drill core being prepared for sampling and Assay. Results anticipated mid- to late-September**

*Hematite (silver) and hematite alteration (red) in drill core
HELIOS_DD001*

The Nullarbor is a new and rapidly growing terrain in Australia

The Nullarbor is being recognised as a highly prospective, under explored region in Australia.

New tenement applications are increasing with particular interest from majors such as Rio Tinto Exploration (RTX), BHP Ni West, Maria Resources (Strategic Elements) and CGM.

Nullarbor Project

HELIOS IOCG – Successful Completion of diamond drill hole

NMR discovered IOCG-style alteration in its very first drill hole

Photos below are of the drill core from Helios_DD001 showing the typical red rocks indicative of IOCG-style hematite + magnetite + pyrite + sericite alteration. The rocks are comparable to the alteration associated with Ernest Henry and Olympic Dam IOCG deposits

Nullarbor Project

HELIOS IOCG – DDH001 Similar alteration to Olympic Dam

OLYMPIC DAM
HEMATITE STAINED

RD2274-372.5 m

Olympic Dam

HELIOS HEMATITE
STAINED GRANITE
(sample # 111)

Helios DDH001

Helios DDH001

Nullarbor Project

CENTRAL IOCG – Successfully Completed DDHC_003

Complex, multiphase “green rock” and “red rock” alteration identified in first ever drill hole

- Diamond hole DDHC003 targeted a 3.2 km long magnetic high
- Central target ridge is 1200m long and 400m wide
- Magnetic peak is over 760nT (400m depth)
- Primary magnetic target ridge is oblique to the regional NE-magnetic and gravity fabric

Nullarbor Project

CENTRAL IOCG – Initial Core Observations (DDHC_003)

Examples of “green rock” and “red rock” alteration in the Central_DDHC003 HQ diamond drill hole

Nullarbor Project

HELIOS IOCG – Currently drilling second hole DDH_002

Image of just two drill holes at Carapateena (IOCG) drilled into the gravity anomaly. CAR01 hit no-grade and Cu-depleted rocks, CAR02 intersected mineralisation. Holes are approximately 900m apart.

NMR are currently drilling the core of the gravity anomaly (similar to CAR02). The gravity anomaly is slightly offset from the magnetics anomaly drilled in Helios_DD001. Image is gravity inversion RL depth slice at -400m. Grid is UTM Z52. Peak is ~2mgal. Model G1 is 3.3g/cm³

Nullarbor Project - On the road to discovery

Successful drill results from the first drill holes completed at both Helios and Central

\$220,000 EIS competitive grant awarded from the government to drill a second diamond hole at Helios

Impressive Magnetics and gravity survey results have helped focus drill holes to help pinpoint potential mineralisation associated with positive identification of IOCG-style alteration

Comprehensive results from Central and Helios drilling to be announced following the acquisition of assays in mid September.

Current drilling set to be completed in late August to early September.

Maneater Breccia Project North Queensland

60% sulfides identified
in breccia outcrop by
previous explorers

NMR planned drilling
in October 2022

Diamond drilling in breccia
revealed sulfides in almost
every meter of drill hole
through the breccia.
*Up to 100% sulfides in
some sections!

MPD001 – historical,
>350m shallow angled
diamond drill hole already
identified Copper, Gold,
Silver, Lead and Zinc

Maneater Breccia Project QLD

Highly prospective Gold-Copper Breccia Pipe

- Precise **target and model** already defined therefore no “research and targeting” period
- High geological potential + existing mineralisation = **rapid results**
- **Close to infrastructure**, access already exists to drill site
- **Highly sought-after area** – e.g., NMR’s maneater tenement is now bound by FMG to the west, north and east after FMG applied for new tenements
- North Queensland is a **proven geological setting for Gold-bearing breccia pipes** including Mt Wright (>1 Moz Au); Mt Leyshon (>3.5 Moz Au); Kidston (>5 Moz Au)

Multiple targets on NMR’s tenement EPM28038

Maneater Breccia Project QLD

Drilling to commence soon to unlock opportunity below existing drill hole.

Positive results already obtained from previous diamond drilling:

- “Increasing metal abundance with depth”.
- >300m of sulfides in breccia (from 48m to 356m down hole depth).
- 80-100% sulfides reported at ~240m down hole.
- Increasing copper (chalcopyrite) with increasing depth.
- Historical diamond drillhole (MPD001) assays show an impressive intersection of **94m @ 4.45g/t of Silver (Ag)** apparent intersection at 53 degrees true thickness of 71.9m.
- Ag intercepts commence at 50m below surface and reach up to **15.8g/t Ag** at 200m down hole depth.
- High Pb & Zn at shallow levels.
- Low gold grade at shallow levels (a good indicator).
- Intrusive porphyry noted in drill logs.
- Clay and sericite alteration = upper level.

Schematic cross section and mineral zoning from Resolute Mining's Mt Wright Breccia Gold mine.

Palmerville Project North Queensland

Palmerville Project

Premiere Copper- and Gold-bearing area with over 50 targets already identified

- 
- 9 x tenements in region with over 50 high priority copper and gold targets ready for follow-up field work in late 2022.
 - Extremely competitive and highly prospective ground. NMR have an almost continuous tenement package which is rare in this current exploration boom. NMR have been granted Project Status by the GSQ.
 - Tenements cover approximately 130km of the under explored 'Chillagoe Formation', a rock unit that is a proven host to mineral deposits to the south, e.g.
 - Mungana Porphyry**, Base metal 1.956 Mt @ 14.3% Zn, 2.8% Cu, 2.2% Pb, 188g/t Ag and 1.15g/t Au (inferred 2 Moz Au)
 - Red Dome** pre-mining reserve of 15 Mt @ 2.6 g/t Au

Palmerville Project - Key Prospects

Leane's Copper

- Surface samples of up to **31.1% Cu**
- Shallow drill intercepts of **33m @0.49 including 2m @1.1% Cu** (LRC04)
- 9 Drill holes
- Interpreted top of deeper porphyry system, with geophysics planned before deep drilling completed

Fairlight

- The Fairlight mine is an ~30m deep shaft at the contact between red jaspers and altered mafic intrusives.
- Samples returning positive results of up to **7.99% Cu with 9ppm Ag**.

Glenroy

- Glenroy also associated with historical mine shafts
- Samples from NMRs recent field campaign returned grades of **5.26% Cu**

Bald Hills

- Historical copper workings.
- Anomalous gold and copper values from soil and rock chip sampling, **0.26ppm Au and 0.575% Cu**.

- ◆ = NMR priority prospects
- + = Regional prospects and occurrences

Palmerville and Maneater Project – Abundant Copper and Gold target set for growth

- ☒ Extremely sought-after package of 9 tenements covering the proven, Cu and Au deposit-bearing Chillagoe Formation.
- ☒ Over 50 high priority Copper and Gold targets ready for follow up field work.
- ☒ Drilling set to commence at the Maneater Hill Breccia Pipe in October 2022 where results already revealed significant Pb, Zn, Ag and abundant sulfide mineralisation.
- ☒ All tenements are now surrounded by companies including Fortescue Metals Group (FMG) highlighting the prospectivity and highly competitive nature of this part of Queensland.
- ☒ Proven copper assays of up to 31.1% in samples from many targets across the project area.

Eastern Goldfields Western Australia

*Four highly prospective
tenements located in the heart
of gold country*

Eastern Goldfields Project

Multiple opportunities in some of the world's most competitive and sought-after gold ground

- 4 Greenfields exploration tenements:
 - ✓ Music Well (2 tenements), Arcoona & Mt Vettters.
 - ✓ Samples over **129g/t Au (bonanza grades)** already recovered from Rock Chips at surface (Music Well).
 - ✓ **Visible gold** in multiple surface rock chip samples
- Exploring granite hosted Au **adjacent to proven “gold-in-granite” mines** (e.g. the Welcome Mine).
- Surrounded by significant projects including:
 - Northern Star** >660,000 oz Au combined resource and >400,000 oz Au past production (Bundarra project area).
 - Mandilla Project** (19.8mt @ 1g/t Au) Anglo Australia Resources (\$65m market cap)
 - Bundarra Project** Northern Star (2017 sold for \$8.5M)

Eastern Goldfields Project

Music Well: Gold & Lithium

- **Gold-bearing veins already discovered** + gold anomalies across the project identified for immediate follow up.
- NMR just completed a high-resolution airborne (fixed wing) magnetics survey over E37/1363 with outstanding results.
- Further field-based sampling on both tenements set to follow up existing results.
- Targets generated during magnetics survey will be prioritised for field work (vegetation sampling)
- Gold targets on E37/1363 lie along the eastern extensions of the same structures that host gold mines. Extremely prospective for significant high grade, narrow vein gold.

Eastern Goldfields Project WA

Arcoona: Gold, Cobalt, Nickel Targets

- **NEW OPPORTUNITIES ARISING FROM NEW DATA** - Greenstones (main gold bearing rocks of the Yilgarn) extending into tenement!
- **PROVEN Au ANOMALIES (soil) IN UNDER EXPLORED TERRAIN –**
- **ADJACENT TO MAJOR GOLD DEPOSITS -**
Surrounded by tenements held by large mining companies including Northern Stars Carouse Dam gold mine (ex Saracen) located only 5km to the east.

Outlook for 2022-2023

- Soil sampling over key areas completed – Awaiting assays
- High resolution airborne magnetics survey completed
- Further drilling and sample assays will be used to zoom-in on potential zone of mineralisation - NMR have already identified many targets on Arcoona that have previously been overlooked.

Eastern Goldfields Project WA

Mt Vettters: Gold, Nickel and REE

- **Mt Vettters** lies adjacent to multiple Ni mines and in an area prospective for granite hosted **Gold**
- Also prospective for **Rare Earth Elements (REE)**
- Field campaign to start in early 2023 to identify Au and REE prospectivity.
- The tenement is close to Kalgoorlie, the heart of mining country in the Yilgarn.

Outlook for 2022-2023

- Soil sampling and cutting-edge geochemical analysis to help identify anomalous Ni and/or REE under shallow cover.
- Follow-up drilling to basement to estimate thickness and extent of potential mineralisation.
- After pinpointing any high-grade anomalous REE or Ni geochemistry, NMR will undertake a more comprehensive drilling campaign to help define a potential resource close to Kalgoorlie.

Works Completed

2022 Work Program Summary

This announcement may contain speculative and forward-looking statements that are subject to risk factors associated with the exploration for gold, copper, nickel and other minerals and metals, mining and production businesses. It is believed that the expectations reflected in these statements are reasonable but they may be affected by a variety of variables and changes in underlying assumptions which could cause actual results or trends to differ materially, including but not limited to price fluctuations, actual demand, currency fluctuations, drilling and production results, Resource or Reserve estimations, loss of market, industry competition, environmental risks, physical risks, legislative, fiscal and regulatory changes, economic and financial market conditions in various countries and regions, political risks, project delay or advancement, approvals and cost estimates. The information in this document relates to, and contains extracts and modified figures from, previous ASX public announcements made by Native Mineral Resources. Native Mineral Resources confirms that it is not aware of any new information or data that materially affects the information included in the in the following presentation and that all material assumptions and technical parameters underpinning the information provided continue to apply and have not materially changed. No reference to Resource or Reserves are presented and all projects are exploration phase only.

Authorised to release to the ASX by Mr. Blake Cannavo, CEO.

Competent Person Statement

The information that relates to Exploration Targets and Exploration Results is based on, and fairly represents, information compiled by Dr Simon Richards, a Competent Person, who is a Member of the AIG and AusIMM. Dr Richards is the Chief Geologist of NMR. Dr Richards has sufficient experience in both mining and exploration, which is relevant to the style of mineralisation and type of deposit under consideration, and to the activity he is undertaking, to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Richards consents to the inclusion of the matters based on his information in the form and context in which it appears.
