

Diamond Drilling Program Recommences at the Webbs Consol Silver-Base Metals Project

Highlights

- Diamond drilling has recommenced at the Webbs Consol Silver-Base Metals Project including the Tangoa West Lode.
- Recently completed drill hole WCS045 into the Tangoa West Lode returned the following high-grade results:
 - **116.1m @ 1,003 g/t AgEq** from 90.9m including;
 - **15.3m @ 1,489 g/t AgEq** from 126.0m and
 - **9.0m @ 1,552 g/t AgEq** from 172.0m and
 - **9.0m @ 1,592 g/t AgEq** from 185.0m and
 - **8.1m @ 2,200 g/t AgEq** from 196.0m including;
 - **3.1m @ 3,325 g/t AgEq** from 201.0m
- 26 additional DD holes planned totaling approximately 5,000m to test extensions of the previously announced holes in addition to testing new targets.

Webbs Consol Silver-Base Metal Project – Drilling recommences

Lode Resources Ltd (ASX:LDR or ‘Lode’ or ‘the Company’) is pleased to announce that it has commenced the next phase of diamond drilling at the Webbs Consol Silver-Base Metals Project with 26 holes totaling approximately 5,000m planned.

Subsequent to the success of the previously reported drill holes, including WCS045 returning **116.1m @ 1,003 g/t AgEq** from 90.9m at the Tangoa West prospect as well as WCS019 returning 26.7m @ 421 g/t AgEq and WCS044 returning 54.0m @ 304 g/t AgEq, this phase of drilling will test down dip extensions below previously announced thick high-grade holes at Tangoa West, Main Shaft and the Copycat Lodes in addition to testing new targets. Tango West will account for the majority of drill holes with 11 holes totaling approximately 3,000m planned.

Lode’s Managing Director, Ted Leschke commented:

“We are very excited about the recommencement of drilling at the Webbs Consol Silver – Base Metals Project. Drilling to date has discovered six mineralised lodes and revealed that the Webs Consol mineral system much more extensive than previous recognised. The Company is well funded for the planned drill programme and beyond”.

Figure 1 shows the drilling program designed to test the Tangoa West Lode up to a depth of 450m vertically. The decision to continue drilling at Webbs Consol reflects a strong belief in prospectivity and expansive size of the Webbs Consol mineral system.

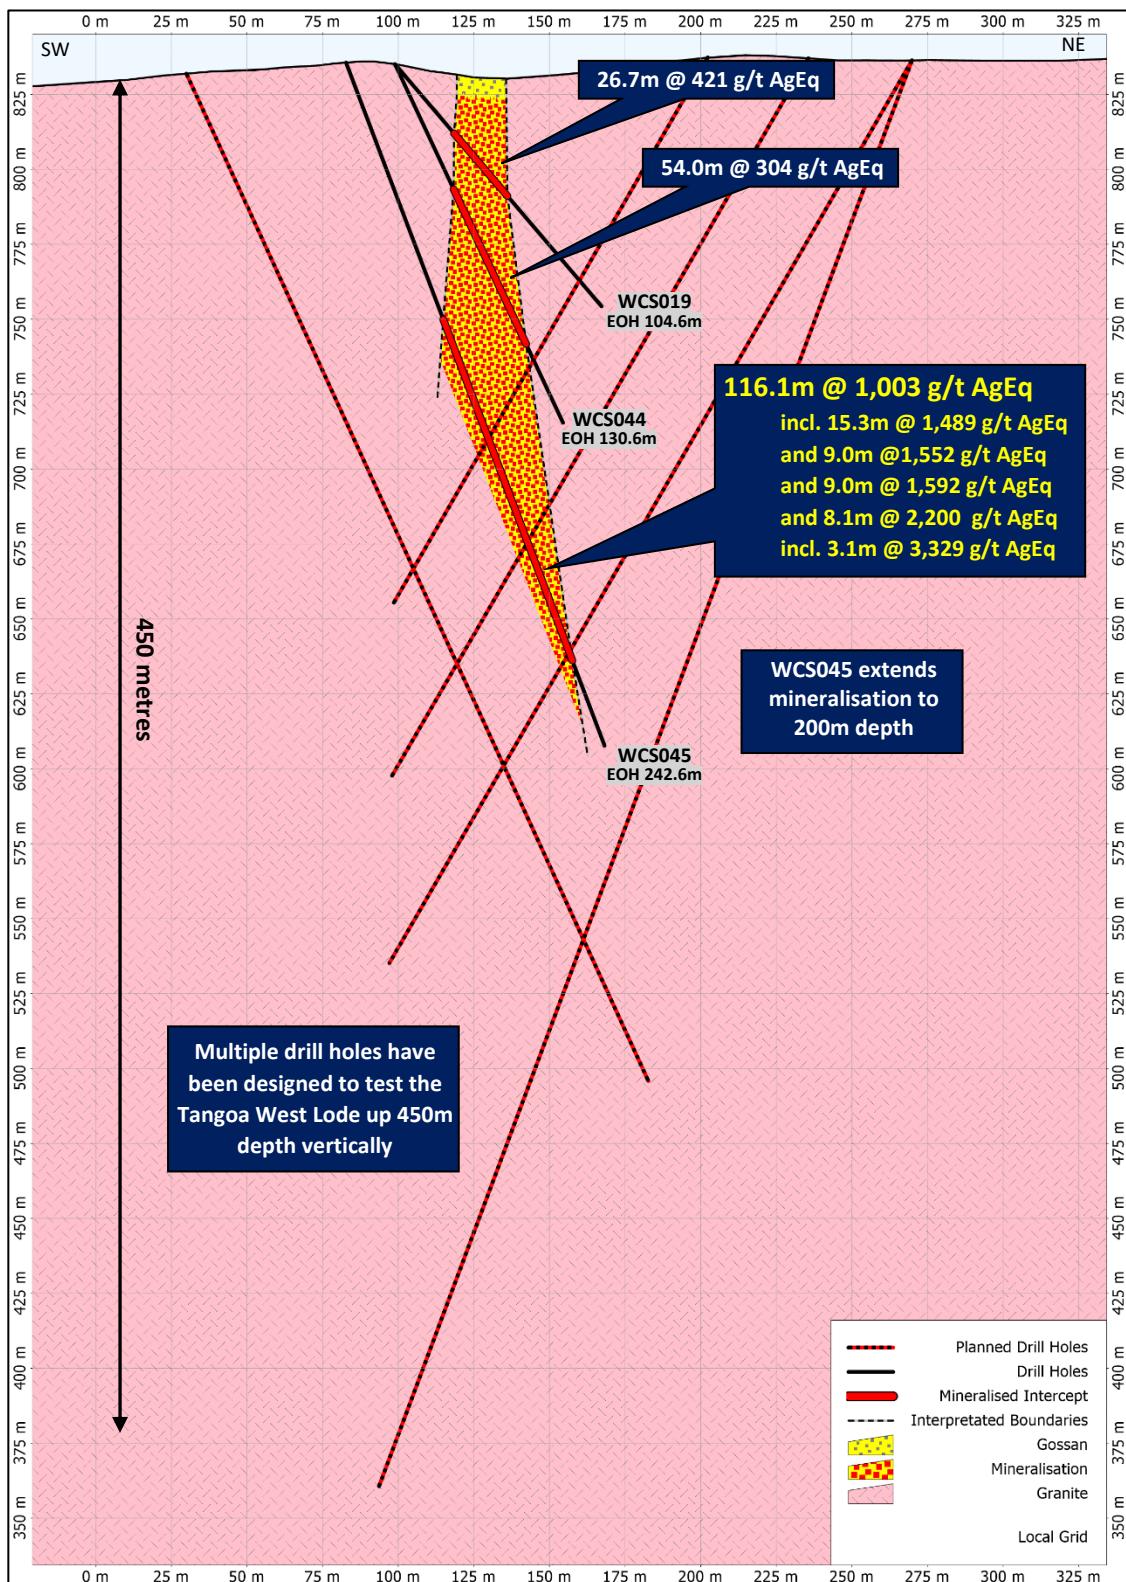

Figure 1 - Tangoa West Lode section showing multiple drill holes designed to test up to a depth of 450m vertically

About Lode Resources

Lode Resources is an ASX-listed explorer focused on the highly prospective but under-explored New England Fold Belt in north eastern NSW. The Company has assembled a portfolio of brownfield precious and base metal assets characterised by:

- 100% ownership;
- Significant historical geochemistry and/or geophysics;
- Under drilled and/or open-ended mineralisation; and
- Demonstrated high-grade mineralisation and/or potential for large mineral occurrences.
