

QUARTERLY ACTIVITIES REPORT

Aeon Metals Limited (ASX:AML) (**Aeon** or the **Company**) is pleased to present its activities report for the quarter ending 30 June 2023.

Highlights:

- Fieldwork completed at Walford Creek focussed on overlaying identified geophysical and geochemical anomalies with further technical surveys including:
 - LAG sampling supported by onsite portable XRF analysis; and
 - Detailed geological mapping.
- Waanyi People #3 Native Title claim covering Walford Creek tenements registered triggers formal change in Traditional Owners for cultural heritage matters.
- Drilling program for 2023 field season remains pending establishment and undertaking of new cultural heritage monitoring agreement.

Commenting on the activities for the quarter, Aeon Managing Director, Dr Fred Hess, said:

“We have completed extensive field mapping of a number of new target areas at Walford Creek in conjunction with laterite and gravel sampling. This information will be coupled with the existing extensive geophysical data sets to plan drilling locations. Portable pXRF analysis, to be confirmed by laboratory assaying, suggests the presence of surface chemical anomalies associated with the known geophysical anomalies.”

“During the quarter the Waanyi People #3 Native Title claim was registered with the National Native Title Tribunal. This has had the effect of changing the recognised Traditional Owners for the Walford Creek tenements from the Gangalidda and Garawa People to the Waanyi People. The Waanyi People had already been included as on-the-ground participants over the past 10 years, actively working with Aeon in overseeing cultural heritage monitoring activities. However, the Waanyi People, and their associated PBC, have chosen not to continue at the present time under these previous arrangements.”

“Aeon awaits a proposal from the Waanyi People for the future conduct of cultural heritage monitoring activities.¹ In the meantime, exploration activities at Walford Creek naturally remain paused.”

“We are currently evaluating opportunities to introduce suitable qualified participants into the Walford Creek Project following the release of the substantial upgrade to the Mineral Resource Estimates earlier this year in March. In addition, other potential transactions that might allow Aeon to complement its Walford Creek Project are regularly under review.”

“The A\$2 million in undrawn loan facilities available under the revised OCP facility agreed in March, combined with cash in hand, provides Aeon with sufficient financial liquidity while awaiting resolution of cultural heritage monitoring arrangements for Walford Creek.”

1. Note that Bowthorn Station, which hosts the Walford Creek tenements, is a granted Grazing Homestead Perpetual Lease and this is deemed to have extinguished native title.

Walford Creek exploration results and updated Mineral Resource Estimates

As noted previously, the Walford Creek tenements now host a substantial Mineral Resource and exhibit significant unexplored potential for further expansion.

Figure 1 highlights the extensive testing undertaken adjacent to the approximate 10 km length of the Fish River Fault to date. The 2022 drilling campaign was focused exclusively on the Le Mans and Amy zones leading to confirmation that mineralisation is continuous along the entire 10 km of strike.

This in turn underpinned a substantial increase in the Mineral Resource Estimates for Walford Creek, such that it is now one of the largest primary cobalt sulphide resources in Australia. In addition, the Copper-Rich component of the Mineral Resource is now arguably one of Australia's highest grade substantial cobalt resources.

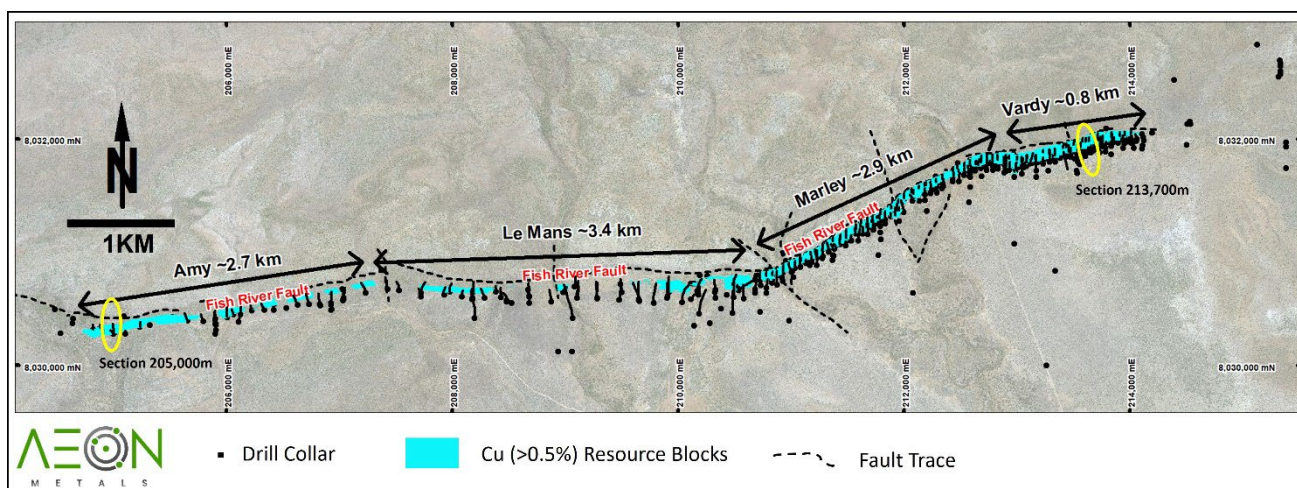

Figure 1: Map showing location of Vardy, Marley, Le Mans and Amy Deposits, and featured drill sections

The paused regional scout drilling program was set to test 52 km of prospective strike potential at Walford Creek (see Figure 2), with exceptional targets identified such as:

- Amy North – first instance of significant ‘copper-only’ style of mineralisation north of the Fish River Fault (FRF);
- Walford North – numerous zones of highly anomalous Cu-Pb-Zn in LAG up to 500 m north of the FRF;
- West Walford - EM survey and surface geochemical response supports at least 4 km of potential additional strike;
- Walford Southwest/Amy Splay – high resolution gravity survey delineated a structural target interpreted to represent a splay off the Fish River Fault;
- Walford Far West – approximately 4 km² of anomalous Cu-Pb-Zn in soils, to date only sporadically tested; and
- Walford South – approximately 14 km long EM conductor with no previous exploration.
