

SUSTAINABLE CREDIT ACTIVE ETF (MANAGED FUND)

As at July 2023

Fund objective

The Fund seeks to achieve a total return before fees that exceeds the total return of the Benchmark by 0.75% p.a. over rolling three year periods.

Sustainability objective

The Fund seeks to invest in credit securities which the Manager expects currently or will in the future contribute positively towards eight 'People' and/or 'Planet' themes.

Investment approach

The Manager utilises a proprietary 'Holistic' framework combining qualitative ESG assessments with third-party ESG measures and metrics to assess issuers; a process then complemented by active stewardship and engagement activities.

Fund performance

The Janus Henderson Sustainable Credit Active ETF (Managed Fund) (Fund) returned 0.89% (gross). The Fund outperformed the Bloomberg AusBond Composite 0-5Yr Index (Benchmark) by 0.17% (gross) in July, which returned 0.72% over the month.

The fall in bond yields in the month generated positive capital returns for longer duration bonds. This was coupled with higher levels of income. We cautiously added duration towards the end of June when rates lifted above our assessment of fair value. This overweight to duration was a positive contributor to performance in July as yields came off their highs in the aftermath of the CPI figures which indicated an easing in inflationary pressures.

It was a good month of outperformance from credit, returns benefitting from both additional income and some spread tightening. Overweight credit allocations were a positive contributor as a result.

The Sustainable Credit Fund has a dual mandate; a sustainability objective and a performance objective. Each company within the portfolio has gone through our credit approval process, which includes negative screens, credit analysis and a sustainability assessment using our proprietary holistic ESG framework and active stewardship (where appropriate). In conjunction with normal portfolio construction practices, securities are chosen for their alignment with sustainable themes as well as their return potential for investors. These themes include 'Planet' (decarbonisation, circular economy, sustainable buildings, biodiversity) and 'People' (equality and alleviating poverty, inclusion and social diversity, aid disability support, affordable housing).

The Fund invests in a diversified and sustainable allocation of credit and agency securities, with at least 80% exposure to securities deemed 'Sustainable' and/or 'Impact' in our assessment. The Fund has close to 70% allocated to investment grade credit, with the remainder across supranationals & agencies, semi governments and liquidity.

One of the themes the Fund is targeting is 'Promote Decarbonisation'. In our recent publication we discuss the following:

- Australian companies need to not only set carbon reduction targets but outline a credible decarbonisation pathway of how this will be achieved.
- Government involvement is vital – tools include subsidies, incentives, and penalties
- Debt investors can hold Australian companies accountable for not decarbonising quick enough
- Domestic debt instruments are available to support companies to decarbonise
- Decarbonisation should become an opportunity for Australian companies and investors

go.janushenderson.com/promoting_decarbonisation_the_aussie_way

Healthy returns were driven from attractive yields on quality credit as well as active credit selections that continued to perform well during July. This was complimented by some active repositioning in interest rate duration as bond yields rose sharply through June into early July, and we moved to overweight duration in the portfolio to lock in elevated yield levels into the portfolio. Interest rate duration was lifted to 0.3 years overweight versus the Benchmark as yields approached more attractive levels for investors.

During July, the Fund added two new high quality issuers NZ Local Government Funding Agency (NZ LGFA) and LaTrobe University via primary markets.

Market review

As central banks edge closer to their policy peak, markets are starting to hope that the inflation genie is back in the bottle, without much detriment to economic growth. This allowed for some divergence across bond tenors. Shorter dated markets see a near term peak in policy, but policy held steady for longer, while longer dated markets eased long term risks. Three-year government bond yields ended the month 18 basis points (bps) lower at 3.87%, while 10-year government bond yields were 4bps higher at 4.06%.

SUSTAINABLE CREDIT ACTIVE ETF (MANAGED FUND)

(continued)

The RBA are now monitoring the balance between the slowing household sector, the strong labour market, and high wages growth.

Market Outlook

The RBA are now monitoring the balance between the slowing household sector, the strong labour market, and high wages growth. We know that the labour market lags the economy, reflecting the monetary policy conditions seen almost a year before, but the turn is difficult to pinpoint. We remain in the midst of the peaking of the economy but believe that policy will continue to grip and slow economic growth, with a shallow recession starting early next year not off the table.

We have reduced the probability of the very last hike in the cycle, with our central case now seeing one more hike to 4.35%. This may come through in either of the next two meetings. However, the longer the RBA leave it, the worse the coincident economic data appears and the harder it is for them to raise rates to tackle inflation. We currently see market pricing of one more rate hike, but delayed until 2024, and then policy held for an extended time, as underestimating the economic headwinds in 2024. We currently see the Australian yield curve as modestly under-valued. We remain on the lookout for tactical opportunities to add further duration on spikes in yields triggered by central bank signalling and data flows.

As the cumulative impact of tighter financial conditions continues to grip and the cycle ages, our focus in the credit space is towards defensiveness, with a keen focus on risk-adjusted returns. Our strong bias is towards high-quality, liquid credit and issuers that can survive and thrive through a range of macro-economic scenarios.

We are avoiding illiquidity, complexity and leveraged sectors, where we anticipate balance sheets will have to contend with a painful period of adjustment in a higher cost of capital environment. Lastly, by adopting a patient and disciplined approach to extending risk and reserving ample investment capacity we will be well placed to take advantage of any further market dislocations.

We remain unimpressed by relatively tight spreads on offer in the bank hybrid market and remain in favour of allocations in investment grade corporates and higher up in the bank capital structure in Tier 2 and senior debt. Both Senior and Tier 2 spreads rallied strongly during FY23 from elevated levels, and we have trimmed some active positions as a result. We continue to look for opportunities within securities producing higher yields as the broader market more rationally reprices risk, with conservatively geared Australian real estate investment trust (REIT) senior spreads showing attractive relative value.

We remain patient on sub investment grade and more illiquid credit, with a strong preference to earn reasonable income up in quality for now. Our expectation remains for lower quality credit spreads to widen as investors digest weakening corporate fundamentals in a higher cost of capital and slowing growth environment. We are withholding risk and liquidity capacity in anticipation of more attractive entry points for global high yield and loans. After the risk rally Credit Default Swaps are now providing cheaper entry points for credit protection and we have increased levels of protection as we approach the point in the cycle where effects of policy tightening should become more apparent.

ESG Commentary

Domestically, primary markets were generally quiet in July, which included only a few labelled ESG bond deals. Two were small private placement new green bond issues, both from supranationals, however we were able to access the two following deals for clients via primary markets. NZ Local Government Funding Agency (NZ LGFA) helps to fund the local councils across New Zealand, who provide services such as public transport, public housing, water treatment, and recycling collection. They also have a strong sustainability framework which can lend funds to borrowers at a discounted loan margin when they commit to address greenhouse gas (GHG) emissions aligned to science-based trajectory. During July they chose to issue a non-labelled bond in Australian Dollars. LaTrobe University issued their inaugural green bond on the last day of July. As well as their social impact through research and education, the University is committed to implementing, maintaining and continually improving environmental management processes to reduce its environmental footprint. Proceeds of the bond can be targeted toward projects aligned with green buildings, renewable energy, energy efficiency, clean transportation, pollution prevention, sustainable water and waste management as well as terrestrial and aquatic biodiversity conservation.

SUSTAINABLE CREDIT ACTIVE ETF (MANAGED FUND)

As at June Quarter 2023

Labelled bonds# structure breakdown	Fund
Sustainability-linked	9%
Sustainability	12%
Social	7%
Green	44%

Labelled bonds include use of proceeds bonds such as green, social and sustainability bonds which fund projects with specific and dedicated environmental and/or social benefits and sustainability-linked bonds that do not finance particular projects but rather have their coupons linked to the issuers reaching predetermined sustainability performance targets and key performance indicators. Percentages may not add up to 100% as the breakdown only considers labelled bond investments in the fund.
