

19 September 2023

Koppamurra Rare Earths Project, South Australia-Victoria

## 84% increase in Resource confirms Koppamurra as a world-scale ionic clay-hosted rare earths Province

### Highlights

- Mineral Resource estimate increases 84% to 186 million tonnes at 712 ppm TREO<sup>1</sup>; Contained TREO tonnage up 60% to 132,000 tonnes
- Koppamurra is now one of the largest ionic clay-hosted rare earth provinces in Australia with extensive scope for more growth, positioning it as a multi-generational supplier to the electric vehicle and renewable energy markets
- Outstanding scope for ongoing Resource growth with current Mineral Resource covering only ~2% of total Koppamurra tenure<sup>2</sup>
- Mineralisation remains open to the north and south
- A ~30,000 m drilling program is set to start in October 2023 to further expand the Mineral Resource
- Continuing to advance metallurgical testwork and other development studies in parallel

Australian Rare Earths (ASX: AR3) is pleased to announce an 84 per cent increase in the Mineral Resource estimate at its Koppamurra project in South Australia.

Interpretation of the geological samples and assays using relevant industry standard methods has resulted in an increase of 84% to 186 Mt of total Mineral Resource estimate with an average TREO grade of 712 ppm. This includes 99 Mt in the Measured and Indicated categories.

The interpretation also resulted in a significant increase to the Exploration Target which now ranges from 340 Mt to 3.1 Bt, at average grades of 510 ppm to 780 ppm TREO and is more than double the upper range tonnage of the previous Exploration Target. The potential quantity and grade of the Exploration Target is conceptual in nature, as there has been insufficient exploration undertaken to estimate a Mineral Resource and it is uncertain if further exploration will result in the estimation of a Mineral Resource.

AR3 Chief Executive Travis Beinke said: *“With each drilling campaign we have progressively built our confidence in our ability to demonstrate the establishment of a world-scale ionic clay-hosted rare earths*

<sup>1</sup> Total Rare Earth Oxide (TREO)

<sup>2</sup> Total Koppamurra tenure includes tenements already granted and those currently under application

*Province in the heart of a tier-one location.*

*“These outstanding results represent a substantial increase to the resource and confirms Koppamurra as a new world-scale ionic clay-hosted rare earths Province. In addition, significant upside remains with an updated Exploration Target range of 340Mt to 3.1 Bt and the resource remaining open to the north and south.*

*“With our growing understanding of the geology and rare earth mineralisation process’ at Koppamurra we remain confident in the consistency of the mineralisation across the project area and are eager to return to drilling next month to drill test areas with no historical drilling.*

*“We intend to continue creating value for shareholders by growing and upgrading the inventory while advancing our metallurgical testwork and other development studies in parallel.*

*“Koppamurra is located in a tier-1 jurisdiction and contains both light and the strategically important heavy rare earths required for high-strength permanent magnets. We have demonstrated that rapid and progressive rehabilitation can be achieved through our trial mining pit. All of these factors distinguish Koppamurra as a unique opportunity to establish a new sustainable source of critical heavy rare earths for a clean energy future.”*

IHC Mining Commercial and Business Development Manager Greg Jones said: *“The latest Mineral Resource estimate has incorporated considerable improvements and controls to the directional analysis of the mineralised geological package, as well as incorporating element specific variography analysis. This has resulted in a kriged estimate that honours the grade profile and distribution within an undulating geological package.*

*“IHC Mining consider this to be a significant improvement over the previously used inverse distance weighting grade interpolation and an additional improvement to the overall JORC classification confidence.”*

## **Mineral Resource Estimate**

The updated Mineral Resource incorporates results from the drilling program conducted between February and June 2023. The overall program added 16,394 m (1,317 holes) to the existing 39,585 m (3,966 holes) drilled for the previous Mineral Resource estimate announced in April 2023.

Interpretation of the geological samples and assays using relevant industry standard methods has resulted in an increase of 84% to 186 Mt of total Mineral Resource estimate with an average TREO grade of 712 ppm. This includes 99 Mt in the Measured and Indicated categories.

Interpretation of geological samples and chemical assay data using relevant industry standard methods resulted in a significant increase in overall resource tonnes, contained metal, and continuity of mineralisation. The updated resource continues to expand with an increase of 56% to Indicated and 132% increase to Inferred resource inventories.

Figure 1 Resource Definition Drilling

Drill spacings to satisfy the Indicated and Measured JORC Resource Categories are at 120 m and 60 m respectively. The drilling which informs the Exploration Target is at line spacings of at least 1 km, and sometimes 2 km apart. Drill hole spacings along the lines are typically 100 m to 400 m apart.

The updated September 2023 Mineral Resource estimate is set out in Table 1 below. This Resource has been reported using a cut-off grade of 325 ppm TREO-CeO<sub>2</sub>.

Table 1 – Koppamurra MRE September 2023 - Rounding may cause differences in the last significant figure.

Koppamurra Mineral Resource Estimate – September 2023										
JORC Category	Tonnes Mt	TREO ppm	Magnet Rare Earths							
			Pr <sub>6</sub> O <sub>11</sub>		Nd <sub>2</sub> O <sub>3</sub>		Tb <sub>4</sub> O <sub>7</sub>		Dy <sub>2</sub> O <sub>3</sub>	
			ppm	% TREO	ppm	% TREO	ppm	% TREO	ppm	% TREO
Measured	0.8	747	33	4.4	122	16.4	3.3	0.4	19	2.5
Indicated	98	716	32	4.4	122	17.0	3.3	0.5	18	2.6
Inferred	88	709	32	4.5	121	17.0	3.2	0.4	18	2.5
<b>Total</b>	<b>186</b>	<b>712</b>	32	4.5	121	17.0	3.2	0.5	18	2.5

A summary of Mineral Resource estimates over time, demonstrating the progressive increase in resource is provided in Figure 2 below.

Figure 2 Koppamurra Mineral Resource estimate

## Exploration Target Estimate

The Exploration Target for the Koppamurra project increased significantly, informed by an extensive road verge drilling program focused on testing the eastern extent of mineralisation within AR3's Victorian tenure EL's 7254 and 7719. The regional road verge drilling combined with additional drilling proximal to the Koppamurra resource has resulted in a revised global Exploration Target of 340 Mt @ 780 ppm TREO to 3.1 Bt @ 510 ppm TREO.

Road verge drilling has continued to be highly effective in quickly evaluating and defining large Exploration Targets. A similar road verge program is planned in Q4 of this year within AR3's South Australian EL's 6509 and 6613 to test the area north of the main resource and south of the currently defined Exploration Target where very limited drilling has been completed (Figure 6).

The planned road verge drilling in South Australia will assist in identifying prospective areas which will guide land access agreements with landholders for an accelerated campaign of follow up drilling over sections of the Exploration Target in early 2024. Negotiations for further access agreements are already underway and ongoing.

The updated September 2023 Exploration Target estimate is set out in Table 2 below. This Exploration Target has been reported using a cut-off grade range of 225 ppm and 425 ppm TREO-CeO<sub>2</sub>.

Table 2– Koppamurra Exploration Target September 2023

Koppamurra Exploration Target – September 2023											
Exploration Target	Tonnes Mt	TREO ppm	Magnet Rare Earths

## Information provided pursuant to ASX Listing Rule 5.8.1

### Geology and Geological Interpretation

The ionic clay hosted REE mineralisation at Koppamurra is hosted by clayey sediments interpreted to have been deposited onto a limestone base (Gambier Limestone) and accumulated in an interdunal, lagoonal or estuarine environment which has been extensively mapped east of the Kanawinka fault in south-east SA. A dedicated post-doctoral research program investigating the source of the REE at Koppamurra is ongoing, with no definitive source of the REE confirmed to date although preliminary results of this study have ruled out the alkali volcanics in south-eastern Australia which was originally considered as a potential source. Mineralogical test work conducted on clay samples from the project area established that the dominant clay minerals are smectite and kaolin, and that the few REE-rich minerals detected during the scanning electron microscope (SEM) investigation were not considered inconsistent with the suggestion that a significant proportion of REE are distributed in the material as adsorbed elements on clay and iron oxide surfaces.

### Sampling and sub-sampling techniques

One metre aircore sample intervals were homogenised within the cyclone and the rotary splitter was set to an approximate 20% split producing around 1.5kg sample for each metre interval. The 1.5kg sample was collected in a pre-numbered calico bag and the 80% portion was collected in plastic UV stabilised bags labelled with hole identity and interval. The 1.5kg sample collected in the calico bag was logged by the geologist onsite. The logged samples were placed in polyweave bags and sent to Naracoorte base at the end of each day. The polyweave bags were then placed on pallets and dispatched to the assay laboratory in Bulka Bags.

### Drilling techniques

RC aircore drilling methods were used obtain samples from the drilling programmes. The RC aircore method uses hollow rods containing an inner tube which sits inside the hollow outer rod barrel. The drill cuttings are removed by injection of compressed air into the hole via the annular area between the inner tube and the drill rod. The cuttings are then blown back to surface up the inner tube where they pass through the sample separating system (cyclone, with a rotary splitter) and are collected.

- Aircore drill rods used were 3 m long.
- NQ diameter (76 mm) drill bits and rods were used.
- All Aircore drill holes were vertical with depths varying between 2 m and 36 m

### Sample analysis method

The 1.5kg aircore samples were assayed by Bureau Veritas laboratory in Wingfield, Adelaide, South Australia, which is considered the Primary laboratory. The samples were initially oven dried at 105 degrees Celsius for 24 hours. Samples were secondary crushed to 3 mm fraction, and the weight recorded. The sample was then pulverised to 90% passing 75µm. Excess residue was maintained for storage while the rest of the sample placed in 8x4 packets and sent to the central weighing laboratory. All weighed samples were then analysed using the Multiple Elements Fusion/Mixed Acid Digest analytical method; ICP Scan (Mixed Acid Digest –

Lithium Borate Fusion) Samples are digested using a mixed acid digest and also fused with Lithium Borate to ensure all elements are brought into solution. The digests are then analysed for the following elements (detection Limits shown): Al (100) As (1) Ba (1) Be (0.5) Ca(100) Ce (0.1) Co (1) Cr (10) Dy (0.05) Er (0.05) Eu(0.05) Fe(100) Gd (0.2) Ho (0.02) K (100) La (0.5) Lu (0.02) Mg (100) Mn (2) Na (100) Nd (0.05) Ni (2) Pr (0.2) S (50) Sc (1) Si (100) Sm(0.05) Sr (0.5) Th (0.1) Ti (50) Tm (0.2) U (0.1) V (5) Y (0.1) Yb (0.05) Zr (1)

## **Estimation methodology**

The JORC Mineral Resource Classification for the Koppamurra project deposit was supported by drill hole spacing, geological continuity and variography of TREO, TREO-CeO<sub>2</sub> and CREO of the target mineralised domain Zone 3.

The classification of Measured, Indicated and Inferred Mineral Resources was supported by all the criteria noted above. A significant Exploration Target has also been defined which can be used to determine areas of significant prospectivity for future drill programmes.

As a Competent Person, IHC Mining Geological Services Manager Greg Jones considers that the results of the Mineral Resource estimate appropriately reflects a reasonable view of the deposit categorisation and reasonable prospects of eventual economic extraction (RPEEE).

## **Cut-off grades, including basis for the selected Cut-off Grade**

The selection of the TREO-CeO<sub>2</sub> cut-off grade used for reporting was based on the experience of the Competent Person and given the early stage of the Koppamurra project, this cut-off grade was selected based on a peer review of publicly available information from more advanced projects with comparable mineralisation styles (i.e., clay-hosted rare earth mineralisation) and comparable conceptual processing methods. Material above this cut-off generates a head feed grade of over 700 ppm, and in the opinion of the Competent Person meets the conditions for reporting of a Mineral Resource with reasonable prospects of eventual economic extraction.

## **Mining and metallurgical methods / material modifying factors**

No specific mining or metallurgical methods or parameters were incorporated into the modelling process. Representative material from the current drilling programme will be utilised in ongoing metallurgical testwork.

The announcement has been authorised for release by the Board of AR3 Limited.

**Competent Person's Statement**

*The information in this report which relates to the Mineral Resources and Exploration Targets for the Koppamurra rare earth deposit is based upon and fairly represents information compiled by Mr. Greg Jones who is a Fellow of the Australasian Institute of Mining and Metallurgy. Mr. Jones is a full-time employee of IHC Mining and has sufficient experience relevant to the style of mineralisation, the type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr. Jones consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.*

**Forward Looking Statement**

*This announcement contains forward-looking statements which involve a number of risks and uncertainties. These forward-looking statements are expressed in good faith and believed to have a reasonable basis. These statements reflect current expectations, intentions or strategies regarding the future and assumptions based on currently available information. Should one or more of the risks or uncertainties materialise, or should underlying assumptions prove incorrect, actual results may vary from the expectations, intentions and strategies described in this announcement. No obligation is assumed to update forward looking statements if these beliefs, opinions, and estimates should change or to reflect other future developments.*

**About Australian Rare Earths Limited**

*Australian Rare Earths is committed to the timely exploration and development of its 100% owned, flagship Koppamurra Project, located in the new Koppamurra rare earths Province in southeastern South Australia and western Victoria. Koppamurra is a prospective ionic clay hosted rare earth deposit, uniquely rich in all the elements required in the manufacture of rare earth permanent magnets which are essential components in electric vehicles, wind turbines and domestic appliances. In addition AR3 is actively reviewing other potential prospective areas which may also host ionic clay hosted rare earth deposits throughout Australia.*

*The Company is focused on executing a growth strategy that will ensure AR3 is positioned to become an independent and sustainable source of rare earths, playing a pivotal role in the global transition to a green economy.*

## JORC Table 1

Section 1 Sampling Techniques and Data		
Criteria	Explanation	Comment
<p><i>Sampling techniques</i></p>	<p><i>Nature and quality of sampling (e.g., cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g., 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g.,</i></p>	<p><i>RC Aircore drilling methods were used obtain samples from the October-December 2021, February-April 2022, September-December 2022 &amp; February- June 2023 drilling programs. The following information covers the sampling process:</i></p> <ul style="list-style-type: none"> <li><i>• All air core samples were collected from the rotary splitter mounted at the bottom of the cyclone using a pre-numbered calico bag and plastic UV sample bag. The samples were geologically logged at 1 m intervals using the marked calico sample which averaged ~1.5 kg in mass.</i></li> <li><i>• A handheld Olympus Vanta XRF Analyser was used to assess the geochemistry of the air core samples in the field. The XRF analysis provided a full suite of mineral elements for characterising the lithological units.</i></li> <li><i>• XRF readings were downloaded from the XRF Analyser at the end of each day and uploaded to the Australian Rare Earths Azure Data Studio database.</i></li> <li><i>• Field duplicates were taken at a rate of 1:34 and inserted blindly into the sample batches.</i></li> <li><i>• At the laboratory, the samples were oven dried at 105 degrees for a minimum of 24 hours and secondary crushed to 3 mm fraction and then pulverised to 90% passing 75 µm. Excess residue was maintained for storage while the rest of the sample placed in 8x4 packets and sent to the central weighing laboratory. The samples were submitted for analysis using XRF-ICP-MS method.</i></li> <li><i>• A laboratory repeat was taken at ~ 1 in 21 samples;</i></li> <li><i>• Commercially obtained standards were inserted by the laboratory at a rate of ~ 1</i></li> </ul>

	submarine nodules) may warrant disclosure of detailed information.	in 9 into the sample sequence.
Drilling techniques	Drill type (e.g., core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g., core diameter, triple or standard tube, depth of diamond tails, face-sampling bit, or other type, whether core is oriented and if so, by what method, etc).	<ul style="list-style-type: none"> <li>• McLeod Drilling used a Toyota Land air core rig and support vehicle for the aircore drilling.</li> <li>• Aircore drilling is a form of reverse circulation drilling where the sample is collected at the face and returned inside the inner tube. The drill cuttings are removed by injection of compressed air into the hole via the annular area between the inner tube and the drill rod.</li> <li>• Aircore drill rods used were 3 m long.</li> <li>• NQ diameter (76 mm) drill bits and rods were used.</li> <li>• All aircore drill holes were vertical with depths varying between 2 m and 36 m.</li> </ul>
Drill sample recovery	Method of recording and assessing core and chip sample recoveries and results assessed. Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.	<ul style="list-style-type: none"> <li>• Drill sample recovery for aircore is monitored by recording sample condition descriptions where 'Poor' to 'Very Poor' were used to identify any samples recovered which were potentially not representative of the interval drilled.</li> <li>• A comment was included where water injection was required to recover the sample from a particular interval. The use of water injection can potentially bias a sample and very little water injection was required during this drilling program.</li> <li>• No significant losses of samples were observed due to the shallow drilling depths (&lt;36 m).</li> <li>• The rotary splitter was set to an approximate 20% split, which produced approximately 1.5 kg sample for each meter interval.</li> <li>• The 1.5 kg sample was collected in a pre-numbered calico bags and the remaining 80% (5 kg to 8 kg) was collected in plastic UV bags labelled with the hole number and sample interval.</li> <li>• At the end of each drill rod, the drill string is cleaned by blowing down with air to remove any clay and silt potentially built up in the sample pipes and cyclone.</li> </ul>

		<ul style="list-style-type: none"> <li>No relationship exists between sample recovery and grade.</li> </ul>
Logging	<p>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</p> <p>The total length and percentage of the relevant intersections logged.</p>	<ul style="list-style-type: none"> <li>All aircore samples collected in calico bags were logged for lithology, colour, cement type, hardness, percentage rock estimate, sorting, and any relevant comments such as moisture, sample condition, or vegetation.</li> <li>Geological logging data for all drill holes was qualitatively logged onto Microsoft Excel spreadsheet using a Panasonic Toughbook with validation rules built into the spreadsheet including specific drop-down menus for each variable. The data was uploaded to the Australian Rare Earths Azure Data Studio database.</li> <li>Every drill hole was logged in full and logging was undertaken with reference to a drilling template with codes prescribed and guidance to ensure consistent and systematic data collection</li> </ul>
Sub-sampling techniques and sample preparation	<p>If core, whether cut or sawn and whether quarter, half or all cores taken.</p> <p>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</p> <p>For all sample types, the nature, quality, and appropriateness of the sample preparation technique.</p> <p>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</p> <p>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half</p>	<ul style="list-style-type: none"> <li>1 m aircore sample interval were homogenised within the cyclone and the rotary splitter was set to an approximate 20% split producing around 1.5 kg sample for each metre interval.</li> <li>The 1.5 kg sample was collected in a pre-numbered calico bag and the 80% (5 kg to 8 kg) portion was collected in plastic UV bags labelled with hole identity and interval.</li> <li>Duplicates were generally taken within the clay lithologies above the basement as this is the likely zone of REE enrichment. These duplicate samples were normally collected by using a second calico bag and placing it under the rotary splitter collecting a 20% split but due to the difficulties of placing a second calico bag under the rotary splitter during sample collection, some duplicates were collected by hand from the plastic UV bags which captured the other 80% of the material recovered from any particular interval.</li> <li>The material in the plastic UV bags was mixed up and every attempt to take as representative sample of the material as</li> </ul>

	<p>sampling. Whether sample sizes are appropriate to the grain size of the material being sampled.</p>	<p>possible by hand was made and then placed in a pre-numbered calico bag.</p> <ul style="list-style-type: none"> <li>• The 1.5 kg sample collected in the calico bag was logged by the geologist onsite. The logged samples were placed in polyweave bags and sent to Naracoorte base at the end of each day. The polyweave bags were then placed on pallets and dispatched to Bureau Veritas laboratory in Adelaide in Bulka Bags.</li> <li>• The remaining 80% split from the aircore interval was stored for future reference.</li> <li>• Field duplicates of all the samples were completed at a frequency of 1 in 34 samples. Field standards were inserted into the sample sequence at a frequency of 1:57. Standard reference Material (SRM) samples were inserted into the sample batches at a frequency rate of 1 per 10 samples by the laboratory and a repeat sample was taken at a rate of 1 per 21 samples.</li> <li>• A rig geologist oversaw the sampling and logging process while a second geologist selected samples for analysis based on the logging descriptions and Pxf analysis. Clay rich sample and those adjacent to the limestone basement contact were selected for assay. REEs are known to be contained within the clay component of the sediment package based on analysis of XRF data and previous exploration work.</li> </ul>
<p>Quality of assay data and laboratory tests</p>	<p>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</p>	<ul style="list-style-type: none"> <li>• The detailed geological logging of samples provides lithology (clay component) and proximity to the limestone basement which is sufficient for the purpose of determining the mineralised zone.</li> <li>• The 1.5 kg aircore samples were assayed by Bureau Veritas laboratory in Wingfield, Adelaide, South Australia, which is considered the Primary laboratory.</li> <li>• The samples were initially oven dried at 105 degrees Celsius for 24 hours. Samples were secondary crushed to 3 mm fraction and the weight recorded. The sample was then pulverised to 90% passing 75 µm. Excess residue was maintained for storage while the rest of the sample placed in 8x4 packets</li> </ul>

	<p><i>Nature of quality control procedures adopted (e.g., standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e., lack of bias) and precision have been established.</i></p>	<p><i>and sent to the central weighing laboratory.</i></p> <ul style="list-style-type: none"> <li>• <i>All weighed samples were then analysed using the Multiple Elements Fusion/Mixed Acid Digest analytical method;</i></li> <li>• <i>ICP Scan (Mixed Acid Digest – Lithium Borate Fusion) Samples are digested using a mixed acid digest and also fused with Lithium Borate to ensure all elements are brought into solution. The digests are then analysed for the following elements (detection Limits shown): Al (100) As (1) Ba (1) Be (0.5) Ca(100) Ce (0.1) Co (1) Cr (10) Dy (0.05) Er (0.05) Eu(0.05) Fe(100) Gd (0.2) Ho (0.02) K (100) La (0.5) Lu (0.02) Mg (100) Mn (2) Na (100) Nd (0.05) Ni (2) Pr (0.2) S (50) Sc (1) Si (100) Sm(0.05) Sr (0.5) Th (0.1) Ti (50) Tm (0.2) U (0.1) V (5) Y (0.1) Yb (0.05) Zr (1)</i></li> <li>• <i>Field duplicates were collected and submitted at a frequency of 1 per 34 samples.</i></li> <li>• <i>Bureau Veritas completed its own internal QA/QC checks that included a Laboratory repeat every 21<sup>st</sup> sample and a standard reference sample every 9<sup>th</sup> sample prior to the results being released.</i></li> <li>• <i>Analysis of QA/QC samples show the laboratory data to be of acceptable accuracy and precision;</i></li> <li>• <i>Australian Rare Earths submitted field standards at a frequency of 1:57 samples.</i></li> <li>• <i>Australian Rare Earths requested BV insert blank washes at a frequency of 1:40 samples. These blank washes were inserted in the sample sequence behind samples which were thought to be mineralized to ensure that no contamination from higher grade samples was occurring. Frequency of blank samples totaled 1 in 24 samples.</i></li> </ul> <p><i>The adopted QA/QC protocols are acceptable for this stage of test work. The sample preparation and assay techniques used are industry standard and provide a total analysis.</i></p>
<p><i>Verification of sampling</i></p>	<p><i>The verification of significant intersections by</i></p>	<ul style="list-style-type: none"> <li>• <i>All results are checked by the company's Technical Director.</i></li> </ul>

<p><i>and assaying</i></p>	<p><i>either independent or alternative company personnel.</i></p> <p><i>The use of twinned holes.</i></p> <p><i>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</i></p> <p><i>Discuss any adjustment to assay data.</i></p>	<ul style="list-style-type: none"> <li>• <i>Field based geological logging for drill holes was entered directly into an Excel spreadsheet format with validation rules built into the spreadsheet including specific drop-down menus for each variable. This digital data was then uploaded to the Australian Rare Earths Azure Data Studio database.</i></li> <li>• <i>Assay data was received in digital format from the laboratory and was uploaded Australian Rare Earths Azure Data Studio database.</i></li> <li>• <i>Field and laboratory duplicate data pairs of each batch are plotted to identify potential quality control issues.</i></li> <li>• <i>Standard Reference Material sample results are checked from each sample batch to ensure they are within tolerance (&lt;3SD) and that there is no bias.</i></li> <li>• <i>The field and laboratory data was exported and imported into Datamine by IHC Robbins which is appropriate for this stage in the program. Data validation criteria are included to check for overlapping sample intervals, end of hole match between 'Lithology', 'Sample', 'Survey' files and other common errors.</i></li> <li>• <i>Assay data yielding elemental concentrations for rare earths (REE) within the sample are converted to their stoichiometric oxides (REO) in a calculation performed within the database using the conversion factors in the below table.</i></li> <li>• <i>Rare earth oxide is the industry accepted form for reporting rare earths. The following calculations have been used for reporting throughout this report:</i></li> <li>• <i>Note that Y2O3 is included in the TREO, HREO and CREO calculation.</i></li> </ul> <p><b>TREO</b> = La2O3 + CeO2 + Pr6O11 + Nd2O3 + Sm2O3+ Eu2O3 + Gd2O3 + Tb4O7 + Dy2O3 + Ho2O3 + Er2O3 + Tm2O3 + Yb2O3 + Lu2O3+ Y2O3</p> <p><b>CREO</b> = Nd2O3 + Eu2O3 + Tb4O7 + Dy2O3 + Y2O3</p> <p><b>LREO</b> = La2O3 + CeO2 + Pr6O11 + Nd2O3</p>
----------------------------	---	--

**HREO** = Sm2O3 + Eu2O3 + Gd2O3 + Tb4O7 + Dy2O3 + Ho2O3 + Er2O3 + Tm2O3 + Yb2O3 + Lu2O3 + Y2O3  
**NdPr** = Nd2O3 + Pr6O11

**TREO-Ce** = TREO - CeO2

**NdPr** = Nd + Pr

Element Oxide	Oxide Factor

*Location of data points*

*Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. Specification of the grid system used. Quality and adequacy of topographic control.*

- *Down hole surveys for shallow vertical aircore drill holes are not required.*
- *The drill hole collars were located using a GPS unit to identify the positions of the drill holes in the field. The handheld GPS has an accuracy of +/-5m in the horizontal.*
- *The datum used is GDA2020/MGA Zone 54.*
- *Topographic data over the southern area of the resource (including all Inferred/Indicated/Measured resource areas) is derived from a fixed wing LiDAR survey flown in May 2022 by Aerometrex using their RIEGL VQ-780ii sensor. The LiDAR survey data was captured at a minimum 25 points per meter and flown at a height of 591m to ensure ~10cm vertical accuracy.*

		<ul style="list-style-type: none"> <li>• Topographic DTM surface over the northern area of the resource (Frances Exploration Target area) is derived from DGPS drill collar positions at this stage of exploration and the RL has been corrected using An Australian wide SRTM. The 1 second SRTM Level 2 Derived Smoothed Digital Elevation Model (DEM-S) is derived from the 2000 SRTM. The DEM-S has a ~30m grid which has been adaptively smoothed to improve the representation of the surface shape and is the preferred method for shape and vertical accuracy from STRM products. The smoothing process estimated typical improvements in the order of 2-3 m. This would make the DEM-S accuracy to be of approximately 5 m.</li> <li>• The accuracy of the locations is sufficient for this stage of exploration.</li> </ul>
<p>Data spacing and distribution</p>	<p>Data spacing for reporting of Exploration Results. Whether the data spacing, and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. Whether sample compositing has been applied.</p>	<ul style="list-style-type: none"> <li>• The holes were largely drilled at between 100 m and 400 m spacings along accessible road verges.</li> <li>• Drill spacing within paddocks and forested areas was largely completed at 100 m to 120 m spacings, with a small portion of holes drilled at 60 m spacings.</li> <li>• The drilling of aircore holes was conducted to determine the regional prospectivity of the wider Koppamurra Project area and for the purposes of generating a mineral resource estimate.</li> <li>• No sample compositing has been applied.</li> </ul>
<p>Orientation of data in relation to geological structure</p>	<p>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have</p>	<ul style="list-style-type: none"> <li>• The Koppamurra mineralisation is interpreted to be hosted in flat lying clays that are horizontal. Undulation of the clay unit is influenced by the weathered limestone basement below.</li> <li>• All drill holes are vertical which is appropriate for horizontal bedding and regolith profile.</li> <li>• The Koppamurra drilling was oriented perpendicular to the strike of mineralisation defined by previous exploration and current geological interpretation.</li> </ul>

	<i>introduced a sampling bias, this should be assessed and reported if material.</i>	<ul style="list-style-type: none"> <li>• <i>The strike of the mineralisation is north south, and the high grades follow a northwest-southeast trend.</i></li> <li>• <i>All drill holes were vertical, and the orientation of the mineralisation is relatively horizontal.</i></li> <li>• <i>The orientation of the drilling is considered appropriate for testing the lateral and vertical extent of mineralisation without any bias.</i></li> </ul>
<i>Sample security</i>	<i>The measures taken to ensure sample security.</i>	<ul style="list-style-type: none"> <li>• <i>After logging, the samples in calico bags were tied and placed into polyweave bags, labelled with the drill hole and sample numbers contained within the polyweave and transported to the base of operations, Naracoorte, at the end of each day.</i></li> <li>• <i>The samples were then placed on pallets ready for transport and remained in a secure compound until transport had been arranged. Pallets were labelled and then 'shrink-wrapped' by the transport contractor prior to departure from the Naracoorte base to the analytical laboratory.</i></li> <li>• <i>Samples for analysis were logged against pallet identifiers and a chain of custody form created.</i></li> <li>• <i>Transport to the analytical laboratory was undertaken by an agent for the TOLL Logistics Group, and consignment numbers were logged against the chain of custody forms.</i></li> <li>• <i>The laboratory inspected the packages and did not report tampering of the samples and provided a sample reconciliation report for each sample dispatch.</i></li> </ul>
<i>Audits or reviews</i>	<i>The results of any audits or reviews of sampling techniques and data.</i>	<ul style="list-style-type: none"> <li>• <i>Internal reviews were undertaken by AR3's Exploration Manager and Technical Director during the drilling, sampling, and geological logging process and throughout the sample collection and dispatch process to ensure AR3's protocols were followed.</i></li> <li>• <i>A review of the database was also undertaken by Wallbridge Gilbert Aztec (WGA) – Consulting Engineers.</i></li> </ul>

## Section 2 Reporting of Exploration Results

Criteria	Explanation	Comment
<p><i>Mineral tenement and land tenure status</i></p>	<p><i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i></p> <p><i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i></p>	<p><i>Koppamurra Project comprises of a granted South Australian Exploration Licences (EL), EL6509, EL6613, EL6690 and EL6691, along with Victorian EL007254 and EL007719 covering a combined area of ~6,700 km<sup>2</sup> which is in good standing.</i></p> <p><i>EL6509 is within 100m of a Glen Roy Conservation Park and the Naracoorte Caves National Park, the latter of which is excised from the tenement. The License area contains several small Extractive Mineral Leases (EML) held by others, Native Vegetation Heritage Agreement areas, as well as the Deadman's Swamp Wetlands which are wetlands of national importance.</i></p> <p><i>A Native Title Claim by the First Nations of the South East #1 has been registered but is yet to be determined. The claim area includes the areas covered by EL's 6509, 6613, 6690 and 6691.</i></p> <p><i>The exploration work was completed on the tenements (EL 6509 and EL6613) in South Australia and (EL007254 and EL007719) in Victoria which are 100% owned by the company Australian Rare Earths Ltd.</i></p> <p><i>The Exploration License EL6509 original date of grant was 15/09/2020 with an expiry date of 14/09/2028.</i></p> <p><i>The Exploration License EL6613 original date of grant was 06/07/2021 with an expiry date of 05/07/2027.</i></p> <p><i>The Exploration License EL007254 original date of grant was 29/04/2021 with an expiry date of 28/04/2024.</i></p> <p><i>The Exploration License EL007719 original date of grant was 29/08/2022 with an expiry date of 28/08/2027.</i></p> <p><i>Details regarding royalties are discussed in</i></p>

		<p><i>chapter 3.4 of Australian Rare Earths Prospectus dated 7 May 2021.</i></p>
<p><i>Exploration done by other parties</i></p>	<p><i>Acknowledgment and appraisal of exploration by other parties.</i></p>	<p><i>Exploration activities by other exploration companies in the area have not previously targeted or identified REE mineralisation.</i></p> <p><i>Historical exploration activities in the vicinity of Koppamurra include investigations for coal, gold and base metals, uranium, and heavy mineral sands.</i></p> <p><i>Historical exploration by other parties is detailed in Chapter 7 of Australian Rare Earths Prospectus dated 7 May 2021.</i></p>
<p><i>Geology</i></p>	<p><i>Deposit type, geological setting and style of mineralisation.</i></p>	<p><i>The Koppamurra deposit is interpreted to contain analogies to ion adsorption ionic clay REE deposits. REE mineralisation at Koppamurra is hosted by clayey sediments interpreted to have been deposited onto a limestone base (Gambier Limestone) and accumulated in an interdunal, lagoonal or estuarine environment.</i></p> <p><i>A dedicated research program investigating the source of the REE at Koppamurra is ongoing, with no definitive source of the REE confirmed to date although preliminary results of this study have ruled out the alkali volcanics in south-eastern Australia which was originally considered.</i></p> <p><i>Mineralogical test work conducted on clay sample from the project area established that the dominant clay minerals are smectite and kaolin, and that the few REE-rich minerals detected during the SEM investigation are not considered inconsistent with the suggestion that a significant proportion of REE are distributed in the material as adsorbed elements on clay and iron oxide surfaces.</i></p> <p><i>There are several known types of regolith hosted REE deposits including, ion adsorption clay deposits, alluvial and placer deposits. Whilst Koppamurra shares similarities with both ion adsorption clay</i></p>

		<p><i>deposits and volcanic ash fall placer deposits, there are also several differences, highlighting the need for further work before a genetic model for REE mineralisation at Koppamurra can be confirmed.</i></p> <p><i>There is insufficient geological work undertaken to determine any geological disruptions, such as faults or dykes, that may cause variability in the mineralisation.</i></p>
<i>Drill hole Information</i>	<p><i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i></p> <ul style="list-style-type: none"> <li><i>- easting and northing of the drill hole collar</i></li> <li><i>- elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i></li> <li><i>- dip and azimuth of the hole</i></li> <li><i>- down hole length and interception depth</i></li> <li><i>- hole length.</i></li> </ul> <p><i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i></p>	<p><i>The material information for drill holes relating to this report are contained within Appendices of this release.</i></p>
<i>Data aggregation methods</i>	<p><i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually</i></p>	<p><i>No metal equivalents have been used.</i></p> <p><i>Significant intercepts are calculated using downhole sample length weighted averages and a lower cut-off grade of 325 ppm TREO-CeO2.</i></p> <p><i>A full list of drill holes with significant</i></p>

	<p><i>Material and should be stated.</i></p> <p><i>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i></p> <p><i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i></p>	<p><i>intercepts &gt;325 ppm TREO-CeO2 can be found in the appendices of this release.</i></p>
<p><i>Relationship between mineralisation widths and intercept lengths</i></p>	<p><i>These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</i></p>	<p><i>All intercepts reported are down hole lengths.</i></p> <p><i>The mineralisation is interpreted to be flat lying. Morphology of the mineralised unit is influenced by the morphology of the undulating limestone basement below. Drilling is vertical perpendicular to mineralisation. Any internal variations to REE distribution within the horizontal layering was not defined, therefore the true width is considered not known.</i></p>
<p><i>Diagrams</i></p>	<p><i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i></p>	<p><i>Diagrams are included in the body of this release.</i></p>
<p><i>Balanced reporting</i></p>	<p><i>Where comprehensive reporting of all Exploration Results is not</i></p>	<p><i>This release contains all drilling results that are consistent with the JORC guidelines. Where data may have been excluded, it is</i></p>

	<i>practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i>	<i>considered not material.</i>
<i>Other substantive exploration data</i>	<i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i>	<i>All known relevant exploration data has been reported in this release.</i>
<i>Further work</i>	<i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i>	<i>AR3 intend to continue to define the Koppamurra resource during 2023 and 2024. This will include (but not limited to) drilling, assay, ground based geophysical surveys and further metallurgical testwork.</i>

### Section 3 Estimation and Reporting of Mineral Resources

Criteria	Explanation	Comment
<i>Database integrity</i>	<p><i>Measures taken to ensure that data has not been corrupted by, for example, transcription or keying errors, between its initial collection and its use for Mineral Resource estimation purposes.</i></p> <p><i>Data validation procedures used.</i></p>	<p><i>Exploration data provided by the company to IHC Mining in the form of Excel files downloaded from the Australian Rare Earths Azure Data Studio database.</i></p> <p><i>Visual screen checks of data to identify duplicate assays and the reproducibility of assays was conducted.</i></p> <p><i>Database assay values have been subjected to random reconciliation with laboratory certified value to ensure integrity.</i></p> <p><i>Visual and statistical comparison was undertaken to check the validity of results.</i></p>
<i>Site visits</i>	<p><i>Comment on any site visits undertaken by the Competent Person and the outcome of those visits.</i></p> <p><i>If no site visits have been undertaken indicate why this is the case.</i></p>	<p><i>Mr Rick Pobjoy, the Technical Director of the Company completed regular site visits during exploration programme activities to observe the drilling, sample and data collection.</i></p>
<i>Geological interpretation</i>	<p><i>Confidence in (or conversely, the uncertainty of) the geological interpretation of the mineral deposit.</i></p> <p><i>Nature of the data used and of any assumptions made.</i></p> <p><i>The effect, if any, of alternative interpretations on Mineral Resource estimation.</i></p>	<p><i>The geological interpretation was undertaken by the Company with direct collaboration and supervision from IHC Mining. The geological interpretation was then initially validated by the Companies Exploration Manager and then additionally validated by IHC Mining during the domain wireframe development within the 3D window of Studio RM Datamine software.</i></p> <p><i>The data spacing and quality is sufficient to support geological and grade continuity.</i></p> <p><i>Interpretation of modelling domains was completed using TREO-CeO<sub>2</sub>, TREO, CaO, lithology and geological logging. Lithology was the primary</i></p>

	<p><i>The use of geology in guiding and controlling Mineral Resource estimation.</i></p> <p><i>The factors affecting continuity both of grade and geology.</i></p>	<p><i>field used to define domain contacts in collaboration with TREO ppm grade.</i></p> <p><i>The Mineral Resource estimate was controlled by the topographic surface, geological surfaces and basement surface (as dictated by limestone).</i></p> <p><i>Four domains were identified with the target high grade TREO clay unit being defined as Zone 3. The Zone 3 mineralised zone is geologically continuous across the project area both along and across strike, positioned directly above the limestone basement contact (Zone 200). The Zone 3 mineralised clay unit has variable grade both along and across strike containing target 'hot-spots' of elevated TREO-CeO2 grades and generally low CaO values overall. Bands of high grade trending north-west south-east are predominant along strike.</i></p> <p><i>Zone 1 can be defined as a thin surficial sand layer which caps the project lithological sequence at surface, continuous both along and across strike. Zone 2 overburden predominantly consists of sand, and clayey sand exhibiting variable thicknesses across the project area.</i></p> <p><i>The limestone basement (Zone 200) also contains isolated intervals of elevated TREO-CeO2 associated with high CaO values which provides the Company further opportunity to explore potential extraction of TREO from the limestone unit going forward.</i></p>
<p><i>Dimensions</i></p>	<p><i>The extent and variability of the Mineral Resource expressed as length (along strike or otherwise), plan width, and depth below surface to the upper and lower limits of the Mineral Resource.</i></p>	<p><i>The Mineral Resource field for the Koppamurra project Dovetail deposit is approximately 19 km in length (directly N-S) and 10 km at the widest point (E-W).</i></p> <p><i>The Frances Area deposit, is located approximately 5 km north of the Dovetail deposit. The Frances Area Exploration Target is approximately ~47 km in length (directly N-S) and ~34 km wide (E-W). The majority of the Frances Area deposit is defined as Exploration Target material therefore further in-fill drilling is required to define its true extents.</i></p>

<p><i>Estimation and modelling techniques</i></p>	<p><i>The nature and appropriateness of the estimation technique(s) applied and key assumptions, including treatment of extreme grade values, domaining, interpolation parameters and maximum distance of extrapolation from data points. If a computer assisted estimation method was chosen include a description of computer software and parameters used.</i></p> <p><i>The availability of check estimates, previous estimates and/or mine production records and whether the Mineral Resource estimate takes appropriate account of such data.</i></p> <p><i>The assumptions made regarding recovery of by-products.</i></p> <p><i>Estimation of deleterious elements or other non-grade variables of economic significance (eg sulphur for acid mine drainage characterisation).</i></p> <p><i>In the case of block model interpolation, the block size in relation to the average sample spacing and the search employed.</i></p> <p><i>Any assumptions behind modelling of selective mining units.</i></p>	<p><i>IHC applied a nominal lower 10% values for each individual rare earth oxide element calculated using statistical analysis by individual domain and applied to down hole intervals that were not sampled due to insignificant REO grade as determined by the Company geologist on site. A top-cut was also applied to values above 99.9% of the population to mitigate against the influence these isolated high grade values have on model. Some of these isolated intervals were magnitudes higher than surrounding intervals. It is recommended that AR3 complete twin drilling to provide confidence in these outlier grades before than can be used for interpolation purposes going forward. The rare earth oxides with the 10% lower nominal values applied to null intervals and top-cutting applied to outlier grades were then used to calculate the final REO reporting groups (TREO, CREO, LREO, HREO and NdPr).</i></p> <p><i>A significant amount of additional control strings were developed to control dip trend and plunge throughout the Dovetail and Frances Area models to improve grade continuity and distribution within each geological domain, particularly Zone 3 (clay).</i></p> <p><i>The Mineral Resource estimate was conducted using CAE mining software (also known as Datamine Studio RM).</i></p> <p><i>Kriging was used to interpolate assay grade from the drill hole samples to interpolate index values and non-numeric sample identification into the block model. Inverse Distance Weighting was also used to interpolate the targeted individual oxides and primary REO reporting groups into the block model to be used as a validation check against Kriging. The difference between the two methodologies with respect to contained tonnes for total rare earth oxides was insignificant and deemed satisfactory.</i></p> <p><i>Appropriate and industry standard search ellipses were used to search for data for the interpolation</i></p>
---	---	--

	<p><i>Any assumptions about correlation between variables.</i></p> <p><i>Description of how the geological interpretation was used to control the resource estimates.</i></p> <p><i>Discussion of basis for using or not using grade cutting or capping.</i></p> <p><i>The process of validation, the checking process used, the comparison of model data to drill hole data, and use of reconciliation data if available.</i></p>	<p><i>and suitable limitations on the number of samples and the impact of those samples was maintained.</i></p> <p><i>No assumptions were made during the resource estimation as to the recovery of by-products.</i></p> <p><i>Further detailed characterisation and leach of ionic clay sample studies are required that may affect the marketability of the heavy mineral products.</i></p> <p><i>The average parent cell size used for the interpolation was half the dominant drill hole width and half the standard drill hole line spacing.</i></p> <p><i>No assumptions were made regarding the modelling of selective mining units however it is assumed that a form of dry mining will be undertaken and the cell size and the sub cell splitting will allow for an appropriate dry mining preliminary reserve to be prepared. Any other mining methodology will be more than adequately catered for with the parent cell size that was selected for the modelling exercise.</i></p> <p><i>No assumptions were made about correlation between variables.</i></p> <p><i>The Mineral Resource estimate was controlled to an extent by the geological/mineralisation and basement surfaces.</i></p> <p><i>Statistical analysis of composited drill holes by domain was undertaken to compare against the un-composited data and showed a satisfactory relationship which concluded that grade cutting or capping was not required at this stage of exploration.</i></p> <p><i>Validation of grade interpolations were done visually in CAE (Datamine Studio RM) software by loading model and drill hole files and annotating and colouring and using filtering to check for the appropriateness of interpolations.</i></p> <p><i>Statistical distributions were prepared for model zones from drill hole and model files to compare the effectiveness of the interpolations. Along</i></p>
--	--	---

		<p><i>strike distributions of section line averages (swathe plots) for drill holes and models were also prepared for comparison purposes.</i></p>
<p><i>Moisture</i></p>	<p><i>Whether the tonnages are estimated on a dry basis or with natural moisture, and the method of determination of the moisture content.</i></p>	<p><i>Tonnages were estimated on an assumed dry basis.</i></p>
<p><i>Cut-off parameters</i></p>	<p><i>The basis of the adopted cut-off grade(s) or quality parameters applied.</i></p>	<p><i>Cut-off grades for TREO-CeO<sub>2</sub> were used to prepare the reported resource estimates. The selection of the TREO-CeO<sub>2</sub> cut-off grade used for reporting was based on the experience of the Competent Person and given the early stage of the Koppamurra project, this cut-off grade was selected based on a peer review of publicly available information from more advanced projects with comparable mineralisation styles (i.e. clay hosted rare earth mineralisation) and comparable conceptual processing methods.</i></p> <p><i>The chosen cut-off grade of TREO-CeO<sub>2</sub> &gt;325 ppm is consistent with the previous Mineral Resource estimate.</i></p>
<p><i>Mining factors or assumptions</i></p>	<p><i>Assumptions made regarding possible mining methods, minimum mining dimensions and internal (or, if applicable, external) mining dilution. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential mining methods, but the assumptions made regarding mining methods and parameters when estimating Mineral Resources may not always be rigorous. Where this is the case, this should be</i></p>	<p><i>No specific mining method is assumed other than potentially the use of dry mining methods.</i></p>

	<i>reported with an explanation of the basis of the mining assumptions made.</i>	
<i>Metallurgical factors or assumptions</i>	<i>The basis for assumptions or predictions regarding metallurgical amenability. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential metallurgical methods, but the assumptions regarding metallurgical treatment processes and parameters made when reporting Mineral Resources may not always be rigorous. Where this is the case, this should be reported with an explanation of the basis of the metallurgical assumptions made.</i>	<p><i>Metallurgical testing was conducted at ANSTO in Sydney and the University of Toronto on composite samples collected from Koppamurra.</i></p> <p><i>Both research facilities have extensive experience in rare earth metallurgical testing on samples from many deposits worldwide, including China where there is a predominance of clay hosted rare earth deposits and operating facilities.</i></p> <p><i>Despite varying head grades (270 ppm to 1500 ppm), extraction between 44% (median) and 68% (maximum) were achieved for the magnet REEs. These results are based upon sulphuric acid as the lixiviant (the liquid used to extract the metal from the minerals), at ambient temperature and pH 1.</i></p> <p><i>Hydrochloric acid was also tested, showing an approximate 5-10% increase (i.e., 67% to 77%) in extraction compared to sulphuric acid.</i></p> <p><i>Metallurgical tests are continuing at ANSTO and University of Toronto, examining pH levels between 1 and 4, to optimise extraction rates and levels versus acid consumption.</i></p> <p><i>The results will be utilised in the development of a final process flowsheet. The preliminary metallurgical test results are encouraging and aligned with expectations for the uniquely clay hosted rare earth minerals at Koppamurra.</i></p>
<i>Environmental factors or assumptions</i>	<i>Assumptions made regarding possible waste and process residue disposal options. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider the potential environmental</i>	<p><i>No assumptions have been made regarding possible waste and process residue however the shallow depth of the deposit will minimise environmental impacts of mining.</i></p> <p><i>The potential processing method disregard the issue of radioactive tailing issues.</i></p>

*impacts of the mining and processing operation. While at this stage the determination of potential environmental impacts, particularly for a greenfields project, may not always be well advanced, the status of early consideration of these potential environmental impacts should be reported. Where these aspects have not been considered this should be reported with an explanation of the environmental assumptions made.*

*Bulk density*

*Whether assumed or determined. If assumed, the basis for the assumptions. If determined, the method used, whether wet or dry, the frequency of the measurements, the nature, size and representativeness of the samples.*

*The bulk density for bulk material must have been measured by methods that adequately account for void spaces (vugs, porosity, etc), moisture and differences between rock and alteration zones within the deposit.*

*Discuss assumptions for bulk density estimates used in the evaluation process of the different materials.*

The selected bulk density defined for each geological domain of the 2023 resource was derived from a 2023 program incorporating aircore drilling of 37 holes for 357.5 m to allow wireline geophysical probing. A Formation Density probe produced in-situ (wet) densities and a Neutron Porosity Probe produced data which can be correlated to water content.

14 of the aircore holes totalling 111m were also sampled at 0.5m intervals to produce the reference data for correlation of the Neutron Porosity Probe data to in-situ Moisture percentage. The resultant correlation allowed the wet density and Neutron Porosity data to be combined to calculate dry density data from the wireline logging of the 37 drill holes in the program.

All aircore holes were logged geologically and were separated to the geological zones of the resource model using the 3D location of the centre of each 0.5m sample relative to the geological zone triangulations developed during interpretation for the resource model.

The resultant dry bulk densities allocated to the zones of the resource model are:

Resource Zone	Generic Lithology	Resource Hosting	Dry Bulk Density (t/bcm)
1	sand clay	No – Cover	1.64
2	clayey sand / sand	Minority	1.67
3	clay / silty clay	Majority	1.60
200	weathered limestone	No - Basement	1.54

Should a void or porosity be located within the detection range of the geophysical probes, the Formation density probe would measure the void as a

		<p>component of the ground within detection range. Similarly, the Neutron Porosity probe would recognise the void or porosity as a part of the ground within detection range and allocate as water if present.</p> <p>Wirelined Drill holes were largely located in the Wrattobully area, with additional holes located in the southern Indicated area of the resource and adjacent to the northern Indicated area of the resource. No holes were wirelined in the Victorian section of the resource.</p>
<i>Classification</i>	<p><i>The basis for the classification of the Mineral Resources into varying confidence categories.</i></p> <p><i>Whether appropriate account has been taken of all relevant factors (ie relative confidence in tonnage/grade estimations, reliability of input data, confidence in continuity of geology and metal values, quality, quantity and distribution of the data).</i></p> <p><i>Whether the result appropriately reflects the Competent Person's view of the deposit.</i></p>	<p><i>The JORC Resource Classification for the Koppamurra project was supported by drill hole spacing, geological continuity and variography of TReO of the target mineralised domained Zone 3, bulk density studies and detailed LiDAR survey.</i></p> <p><i>The classification of Measured, Indicated and Inferred resources was supported by all the criteria noted above. A significant Exploration Target has also been defined which can be used to determine areas of high prospectivity for future drill programmes for both the Dovetail and Frances Area deposits.</i></p> <p><i>As a Competent Person, IHC Mining Geological Services Manager Greg Jones considers that the result appropriately reflects a reasonable view of the deposit categorisation.</i></p>
<i>Audits or reviews.</i>	<i>The results of any audits or reviews of Mineral Resource estimates.</i>	<i>No audits or reviews of the mineral resource estimate has been undertaken at this point in time.</i>
<i>Discussion of relative accuracy/ confidence</i>	<i>Where appropriate a statement of the relative accuracy and confidence level in the Mineral Resource estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the</i>	<i>This latest geological model and Mineral Resource estimation update for the Koppamurra project has utilised Kriging for the grade interpolation process, replacing Inverse Distance as the preferred methodology which was used for earlier Mineral Resource updates. Given the nature and style of mineralisation within the relatively thin clay host domain (Zone 3) where elevated grades occur sporadically throughout, Kriging is considered a more suitable choice to mitigate the influence of the isolated outlier high grade intervals and</i>

	<p><i>relative accuracy of the resource within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors that could affect the relative accuracy and confidence of the estimate.</i></p> <p><i>The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.</i></p> <p><i>These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.</i></p>	<p><i>instead provides a more gradual grade distribution during the interpolation process, reducing the potential to overestimate grade in areas.</i></p> <p><i>The use of nominal lower 10% REO values were applied to individual oxides before the calculation of the primary reporting rare earth groups by domain to replace null sample intervals. This was done to restrict 'high grade blow-out' in the block model providing further confidence to the grade interpolation.</i></p> <p><i>Top-cutting has also been used to mitigate against significant high grade outlier intervals, particularly those that directly influence areas of the model with reduced drilling. This was calculated using statistical analysis by which the 99.9 population value was calculated for each individual oxide and applied as a constant to the outlier values that reside above 99.9% of the population. It should be noted that this was also completed prior to the calculation of each of the primary reporting rare earth groups.</i></p> <p><i>Validation of the model vs drill hole grades by observation, swathe plot and population distribution analysis was favourable. Continued in-fill drilling will likely improve the interpolation results.</i></p> <p><i>The statement refers to global estimates for the entire known extent of the Koppamurra project Dovetail and Frances Area deposits.</i></p> <p><i>No production data is available for comparison with the Koppamurra project Dovetail and Frances Area deposits at this point in time.</i></p>
