About PainChek®

PainChek® Ltd is an Australian based company that develops pain assessment technologies.

Pain often goes unrecognised and under-treated in people with communication difficulties. PainChek Universal is a clinically validated smartphone-based medical device that enables best practice pain assessment for all people, everywhere.

PainChek Universal is a complete point-of-care solution that combines the existing PainChek® App with the Numerical Rating Scale (NRS). This enables best-practice pain management for all residents living with pain in any environment — from those who cannot verbalise pain to those who can, and those who fluctuate between the two.

The PainChek® App uses artificial intelligence and facial recognition to detect pain in those who cannot self-report. This gives a voice to those who cannot verbalise pain, whilst also driving objectivity and consistency in all assessments. For those who can self-report, PainChek Universal also includes access to the Numerical Rating Scale, a well-established standard used to document pain levels amongst these individuals. PainChek Universal also supports pain assessment using both tools at the point of care, for those people whose ability to communicate fluctuates.

PainChek® is being rolled out globally in two phases: first, PainChek® for adults who are unable to effectively verbalise their pain such as people with dementia, and second, PainChek® for infants who have not yet learnt to speak. Both the adult and infants products have received regulatory clearance in numerous markets including Australia, Europe, UK, NZ, Singapore and Canada.

The PainChek® Shared Care Program is a PainChek® licensing model which enables a professional carer to share their resident or patient data securely with other healthcare professionals or designated homebased family carers for ongoing pain assessments or clinical data review.

AGM November 2023

PHILIP DAFFAS, CEO & MD

PAINCHEK LTD | ASX:PCK

Our purpose is to give
a **voice to people**
who **cannot reliably**
verbalise their pain

THE PAINCHEK® UNIVERSAL APP: QUICK AND EASY OPERATION

Digitalized System:

- 42 digital test points across 6 domains
- generates overall pain severity score
- no pain, mild, moderate or severe

Medical App on SMART phone design :

- IOS & Android
- guides the carer in other pain assessment factors e.g. movement, vocalization etc.
- questions with Yes/No decisions

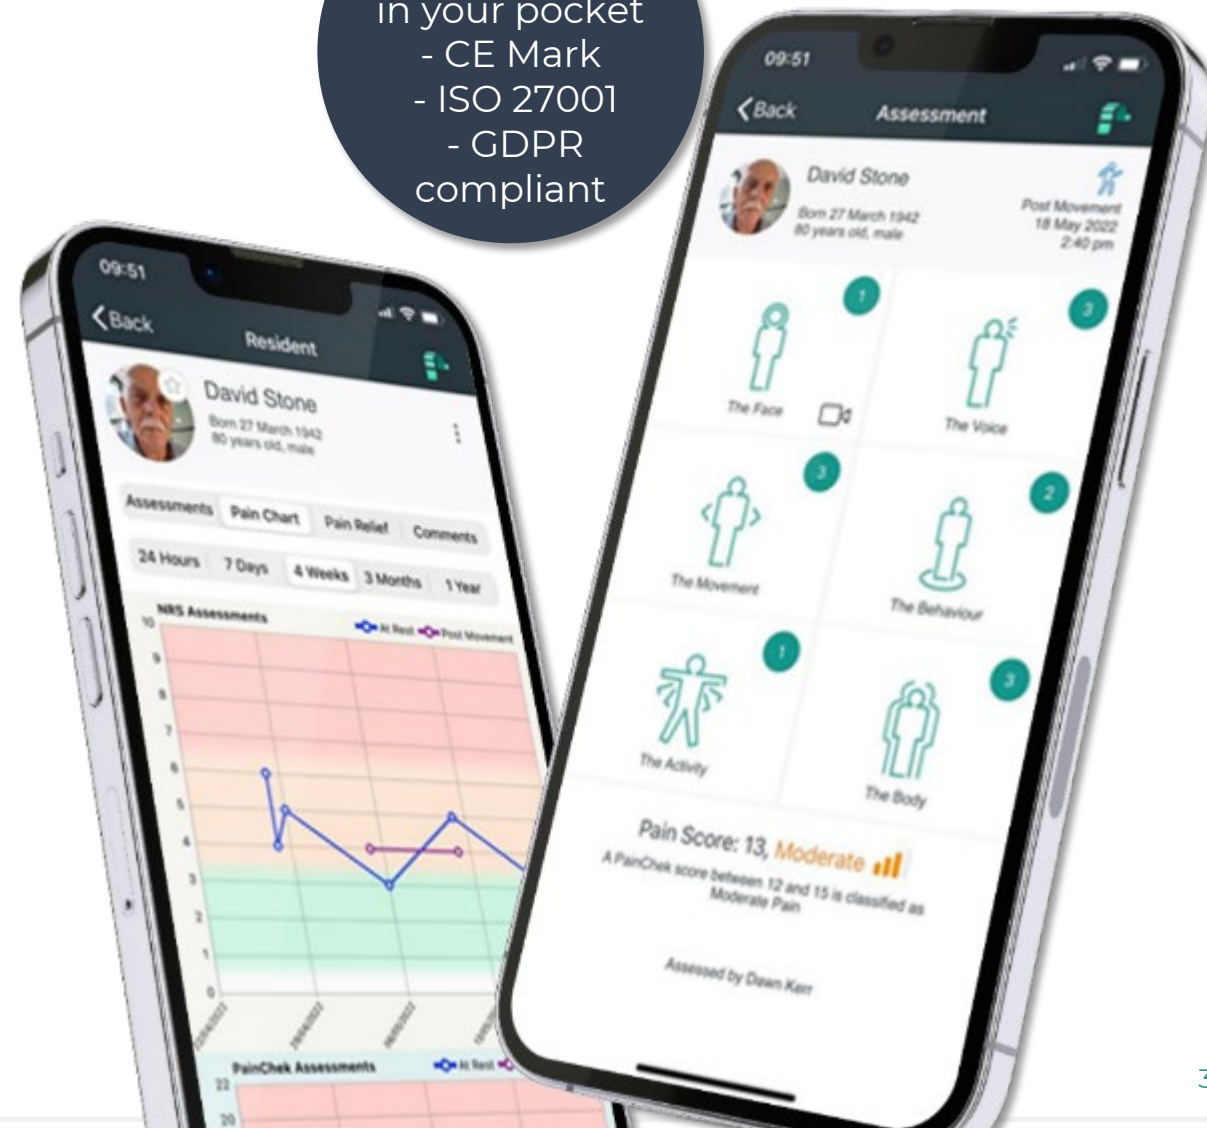

AI technology to drive objectivity:

- Combines AI & Human Intelligence
- 3 second scan of patient face
- recognises 9 micro-facial expressions indicative of pain

Used by any carer in all environments :

- Rapid to test and easy to use
- pain trend line and monitoring of treatment
- data analytics capability for audit and accreditation

A medical device
in your pocket
- CE Mark
- ISO 27001
- GDPR
compliant

Notable existing UK Aged Care Clients Covering 9,400 beds.

ST MICHAEL'S HEALTH GROUP- PAINCHEK'S 1ST CANADIAN COMMERCIAL CLIENT

FEEDBACK

"Our search for the latest advancements in aged care led us to implement PainChek at St. Michael's Health Group. We consider ourselves lucky that we came across **PainChek, as it represents the next level of pain assessment.**"

"The nursing team constantly reflects on how **the tool has transformed their pain assessments.** Previously, some procedures had become routine, without much thought put into the manual assessments. There has been an obvious shift with PainChek®."

For this resident living with advanced dementia, PainChek® has been invaluable. **Tracking her pain was challenging because of her intense discomfort and shifting cognitive conditions.**

St. Michael's Health Group

Leading the Way in Senior Care Through Innovative Pain Management

Based in Edmonton, Canada, St. Michael's Health Group has been dedicated to providing compassionate care for seniors since 1996. Known for its innovative approach, the facility is always on the lookout for technological ideas or systems that can improve both care and quality of life for residents. This is what led to the implementation of PainChek.

As an innovative organization, we are constantly looking for advancements in care to improve residents' quality of life. Residents say, "Our search for the latest advancements in aged care led us to implement PainChek at St. Michael's Health Group. We consider ourselves lucky that we came across PainChek, as it represents the next level of pain assessment."

After a successful implementation at St. Michael's Health Group, the facility has implemented PainChek for enhanced pain management and assessment for its residents. After a successful implementation, the facility has implemented PainChek for enhanced pain management and assessment for its residents.

The implementation of PainChek at St. Michael's Health Group has been a success. The facility has implemented PainChek for enhanced pain management and assessment for its residents.

1. Resident Care

More accurate pain assessments have led to appropriate interventions and improved residents' quality of life. The facility has implemented PainChek for enhanced pain management and assessment for its residents.

"For this resident living with advanced dementia, PainChek® has been invaluable." Testimonial shared: "Tracking her pain was challenging because of her intense discomfort and shifting cognitive conditions. With PainChek®, we could better understand the shifts in her pain levels. The insights from the app guided our nurse to adjust her medication, and we were able to reduce the severity of her pain over time. Pain levels have significantly reduced, and her family is very happy her condition has improved."

St Michael's Health Group Case Study

SCOTTISH CARE INSPECTORATE PAINCHEK - 1st PHASE OUTCOMES

"We welcome the use of innovation and technology to help support people to experience the best possible care."

"This device should enable more appropriate use of medication and improved quality of life for care home residents."

"In future the device may also be able to support detection of pain in young children who are unable to adequately communicate pain."

Spokesperson for the Scottish Care Inspectorate

**Reduction in falls
by 75% in 3 months
(42% over 6 months)**

**Reduced stress and
distress from rate of 12
incidents to 4 in 6 months**

**More appropriate use of
pain medication and a
reduction in the prescribed
rate of pain medication**

The phase two trial will test PainChek® across 15 care services to gather more information on its effect on medication and quality-of-life, as well as its adoptability and longer-term sustainability. This will include tests in different user settings, service types, user groups and geographical locations.
