LAG-3 IMMUNOTHERAPY

Unlocking the power of the immune system to fight cancer and autoimmune disease

Forward-Looking Statements

The purpose of the presentation is to provide an update of the business of Immutep Limited ACN 009 237 889 (ASX:IMM; NASDAQ:IMMP). These slides have been prepared as a presentation aid only and the information they contain may require further explanation and/or clarification. Accordingly, these slides and the information they contain should be read in conjunction with past and future announcements made by Immutep and should not be relied upon as an independent source of information. Please refer to the Company's website and/or the Company's filings to the ASX and SEC for further information.

The views expressed in this presentation contain information derived from publicly available sources that have not been independently verified. No representation or warranty is made as to the accuracy, completeness or reliability of the information.

Any forward-looking statements in this presentation have been prepared on the basis of a number of assumptions which may prove incorrect and the current intentions, plans, expectations and beliefs about future events are subject to risks, uncertainties and other factors, many of which are outside Immutep's control. Important factors that could cause actual results to differ materially from assumptions or expectations expressed or implied in this presentation include known and unknown risks. Because actual results could differ materially to assumptions made and Immutep's current intentions, plans, expectations and beliefs about the future, you are urged to view all forward-looking statements contained in this presentation with caution.

This presentation should not be relied on as a recommendation or forecast by Immutep. Nothing in this presentation should be construed as either an offer to sell or a solicitation of an offer to buy or sell shares in any jurisdiction.

This presentation is authorised for release by the CEO of Immutep Limited.

Immutep Highlights

Leader in LAG-3 immunotherapy with advanced pipeline

LAG-3 pure play with three clinical-stage assets and two preclinical programs designed to fight cancer & autoimmune diseases.

First-in-Class Lead Candidate

Eftilagimod alpha (efti), a unique immune system activator, has compelling data with good safety across several clinical trials.*

Validation through partnerships

Multiple partnerships and collaborations with large pharma.

MERCK
Merck KGaA Darmstadt, Germany
GSK
EOC
NOVARTIS
LabCorp

Global presence; strong IP/balance sheet

Global presence and strong IP across diversified LAG-3 portfolio. Well-funded with cash runway to early 2026.

Large opportunity & multiple catalysts ahead

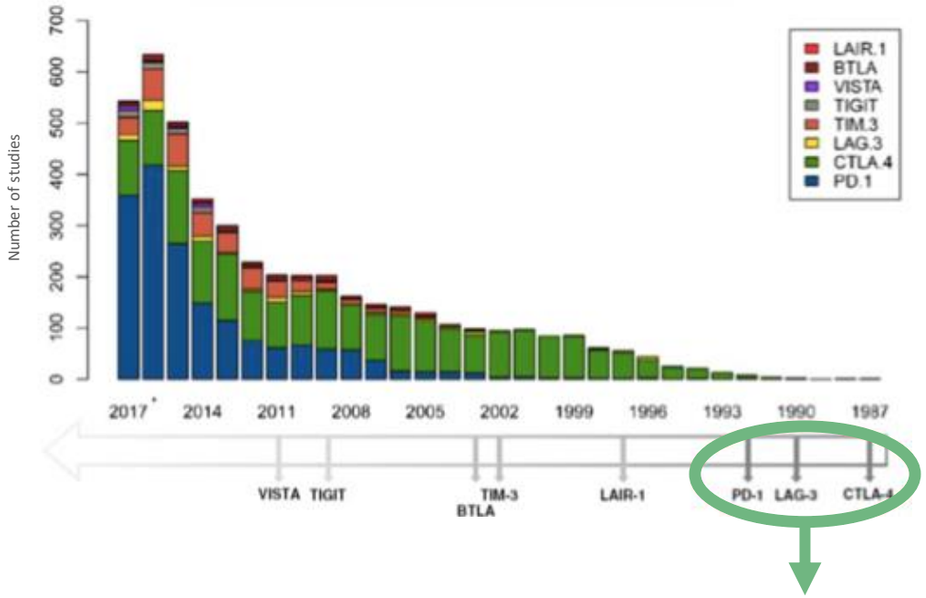
Later-stage clinical programs are in large addressable markets (e.g., lung, breast, and head & neck cancer**). Multiple data readouts in '24.

* (1) Combining the antigen-presenting cell activator eftilagimod alpha (soluble LAG-3) and pembrolizumab: overall survival data from the 1st line non-small cell lung cancer (NSCLC) cohort of TACTI-002 – ESMO 2023; (2) Biomarker and multivariate analyses results from AIPAC: A phase IIb study comparing efti to placebo in combination with weekly paclitaxel in HR+ HER2- metastatic breast carcinoma. ESMO - May 2022; (3) Results from a Phase II study of efti and pembrolizumab in patients with PD-L1 unselected metastatic 2nd line head and neck squamous cell carcinoma (HNSCC) SITC 2021.

**Global market estimates for NSCLC, HNSCC, and MBC are $24BB (current), $3.5BB (by 2025) and $12.7BB (by 2024), respectively, with NSCLC expected to double to $48 billion by 2031, based on intelligence data from GlobalData and Nature Reviews Drug Discovery 22, 264-265 (23 Jan 2023).

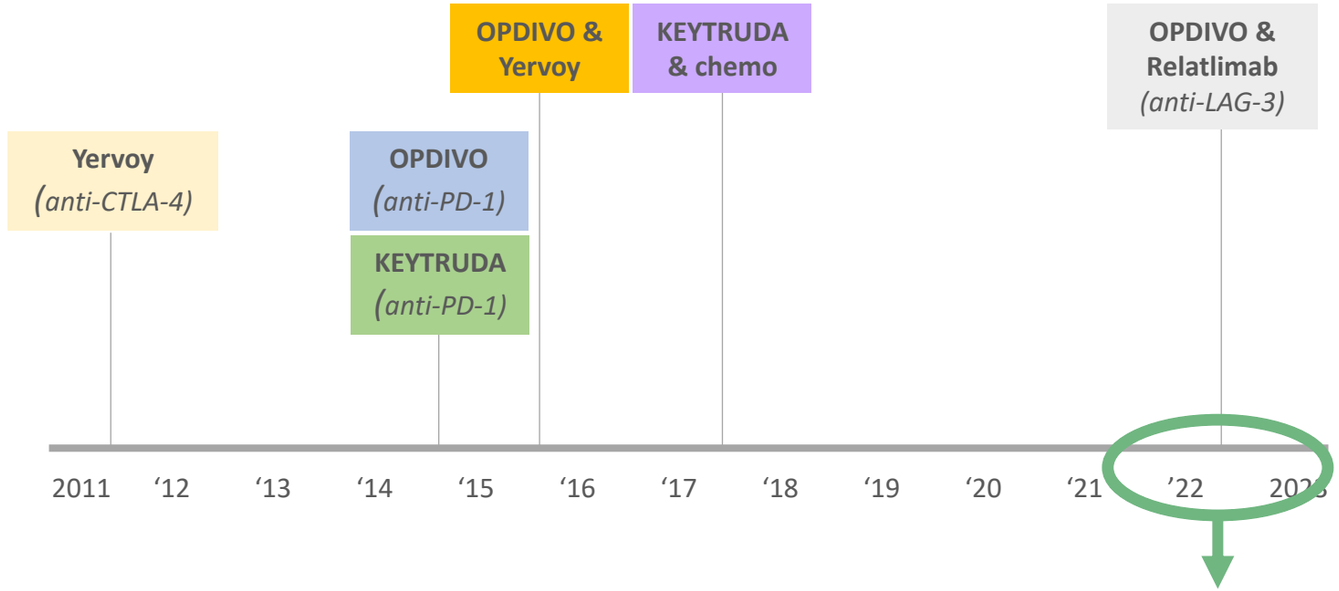
LAG-3 Newest Entrant to Immuno-Oncology (IO) Landscape

Immune Checkpoint Discovery and Clinical Studies*



LAG-3 discovered in 1990 by Immutep's Chief Scientific Officer, Dr. Frédéric Triebel

Regulatory Approval Timeline of Immuno-Oncology Therapies**

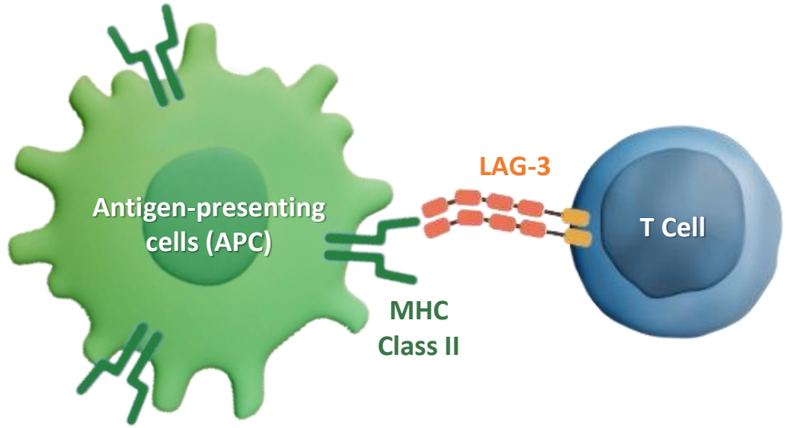


The immune system's ability to fight cancer has led to regulatory approval of IO therapies targeting the immune checkpoints **CTLA-4**, **PD-1**, and most recently **LAG-3**

*Checkpoint Inhibitors: Applications for Autoimmunity, Springer, September 2017Current Allergy and Asthma Reports 17(10) DOI:10.1007/s11882-017-0740-z. ** Yervoy (ipilimumab), OPDIVO (nivolumab), KEYTRUDA (pembrolizumab), Opdualag (nivolumab + relatlimab)

Pioneering LAG-3 Immunotherapy Portfolio

Immutep has multiple first-in-class therapeutics designed around the interaction of **MHC Class II molecules** on antigen-presenting cells (APC) and **LAG-3** on T-cells to fight cancer & autoimmune disease



Targeting MHC Class II on APCs#	Targeting LAG-3 on T cells			
Efti Soluble LAG-3 fusion protein	**LAG525*** Blocking LAG-3 antibody	Anti-LAG-3 small molecule	**GSK'781*** Depleting LAG-3 antibody	**IMP761** Agonist LAG-3 antibody
	Oncology Immune Stimulation		**Autoimmune Disease** Immune Suppression	

MHC Class II = Major Histocompatibility Complex Class II. * LAG525 (leramilimab) is out-licensed to Novartis and GSK'781 is out-licensed to GSK.

Deep LAG-3 Pipeline in Oncology & Autoimmune Diseases

Information in pipeline chart current as of May 2023;AIPAC-003 Phase II/III trial expected to begin Q1'2023. For EOC's China rights, Immutep may receive undisclosed milestones plus royalties; LAG525 - ClinicalTrials.gov (for Novartis' global rights, Immutep may receive milestones plus royalties); GSK2831781 - ClinicalTrials.gov (for GSK's global rights, Immutep may receive milestones plus royalties), Phase II in Ulcerative Colitis discontinued. * Late stage refers to active Phase IIb clinical trials or more clinically advanced clinical trials; # Conducted by EOC in China. Immutep has no control over either the trials.
§ Investigator Initiated Trials controlled by lead investigator & therefore Immutep has no control over this clinical trial; [a] In combination with KEYTRUDA®; [b] In combination with BAVENCIO®.

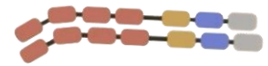
Efti

A proprietary soluble LAG-3 protein and
first-in-class MHC Class II agonist

Efti: A Soluble LAG-3 ‘Key’ to Stimulate Immune System via MHC II

immutep
LAG-3 IMMUNOTHERAPY

Eftilagimod Alpha (efti)



Soluble LAG-3

Human IgG1 backbone

First-in-class soluble LAG-3 fusion protein and MHC Class II agonist

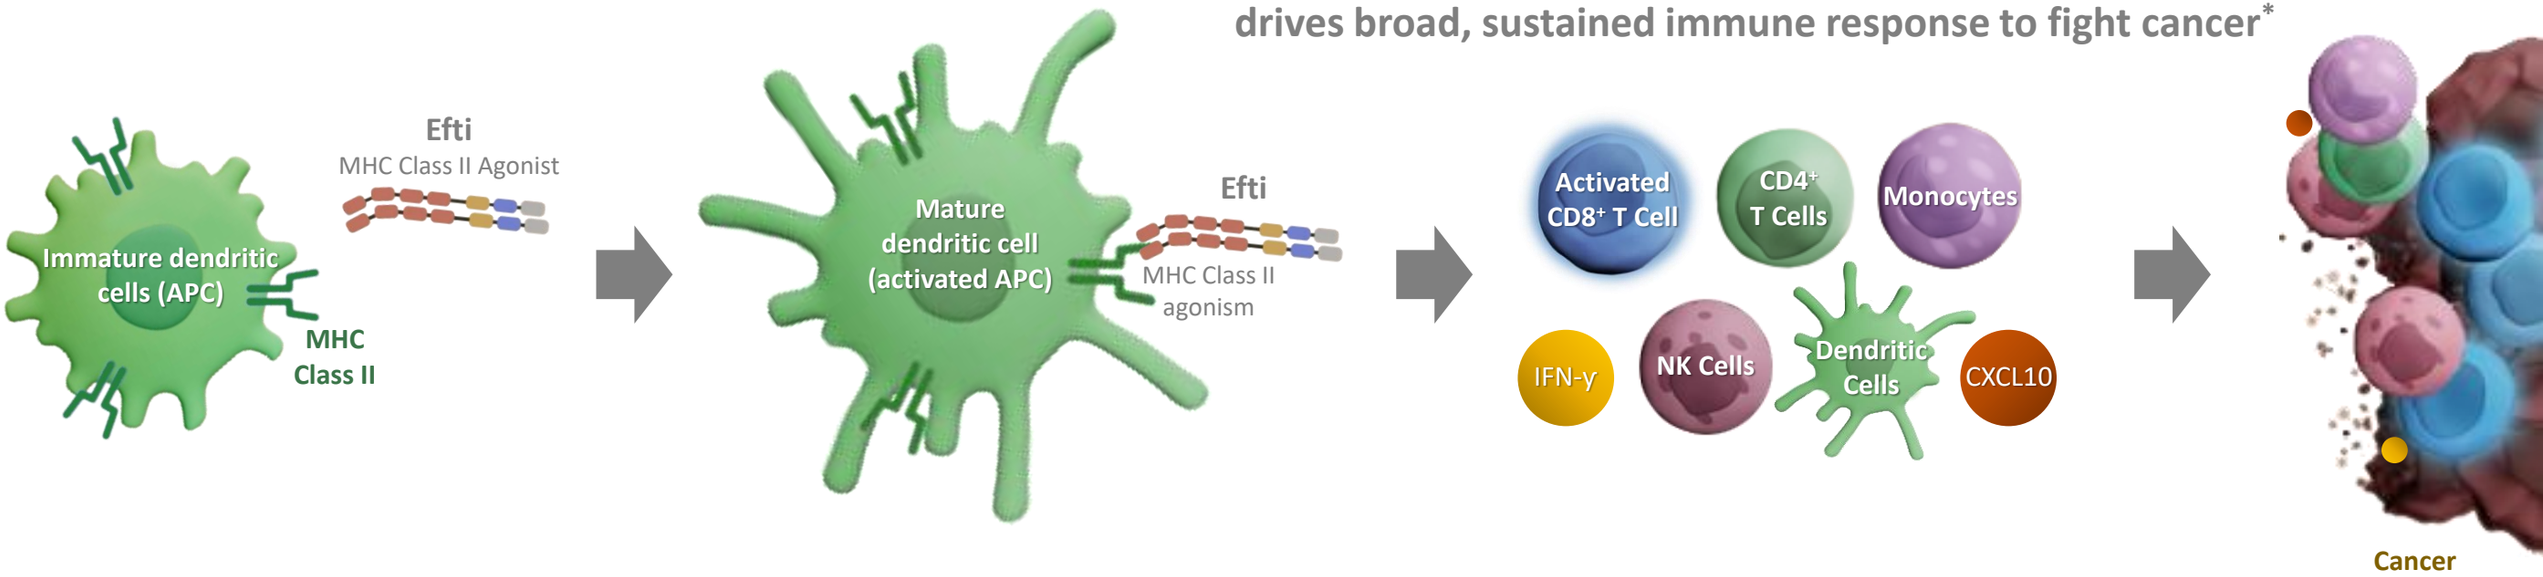
High affinity for subset of MHC Class II molecules on antigen-presenting cells (APCs)

Efti unlocks powerful immune response via unique MHC Class II agonism

Uniquely Driving Adaptive/Innate Anti-Cancer Immune Response

immutep
LAG-3 IMMUNOTHERAPY

Efti's unique activation of APCs via MHC Class II agonism drives broad, sustained immune response to fight cancer*



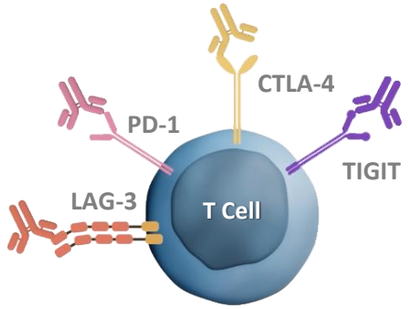
* In clinical trials, including monotherapy and in combination with anti-PD-(L)1 therapies and with chemotherapy, efti has led to significant and sustained increases in anti-tumor cells and chemokines / cytokines including those listed in the graphic.
MHC Class II = Major Histocompatibility Complex Class II. APC = Antigen-Presenting Cell.

Differentiated Approach in Oncology

Complementary efti + anti-PD-(L)1 combination helps overcome limits & toxicity of other IO combinations

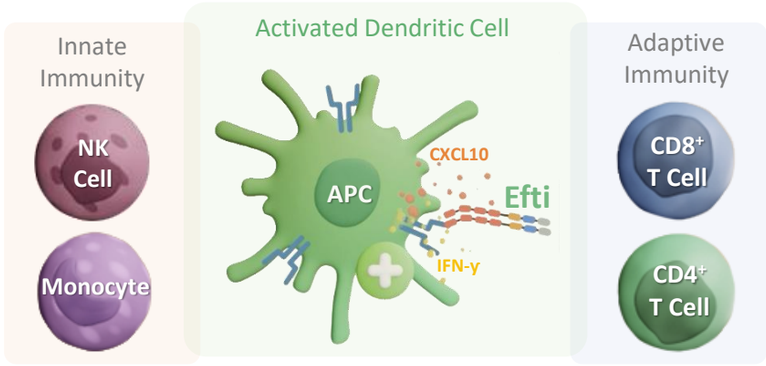
immutep
LAG-3 IMMUNOTHERAPY

Many IO combinations focus on T cells alone and just target different immune checkpoints on these cells



- Efficacy has been mostly limited to “hot” tumours (e.g. high PD-L1 expression) across multiple solid tumours
- Releasing the brakes on these powerful immune cells by blocking two immune checkpoints versus one leads to increased toxicity[1,2]

Efti complements other IO therapies through its unique activation of dendritic cells that bridge adaptive/innate immune systems



- Efti + anti-PD-(L)1 is efficacious in “hot”, “tepid”, and “cold” tumours (e.g. high/low/negative PD-L1 expression) and has favourable safety profile
- Unique immune activation and synergies with ICIs like anti-PD-(L)1 and with chemotherapy positions efti well in solid tumors

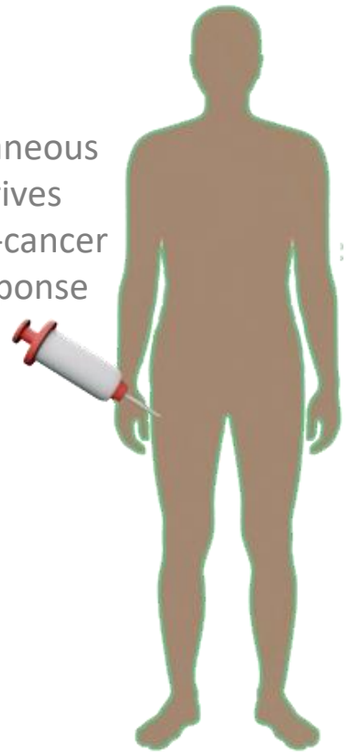
1. Increased rate of high-grade treatment-related adverse events: 59% in patients treated with ipilimumab (anti-CTLA-4) plus nivolumab (anti-PD-1) versus 23% in patients treated with nivolumab and 28% in patients treated with ipilimumab – Larkin et. al. - Five-Year Survival with Combined Nivolumab and Ipilimumab in Advanced Melanoma, N Engl J Med 2019; 381:1535-1546 DOI 10.1056/NEJMoa1910836. 2. Grade 3 or 4 treatment-related adverse events occurred in 18.9% of patients in the relatlimab–nivolumab group and in 9.7% of patients in the nivolumab group.17.7% of patients in the relatlimab–nivolumab group discontinued treatment due to drug-related adverse events as compared to 8.9% in the nivolumab group. – Tawbi et. al. Relatlimab and Nivolumab versus Nivolumab in Untreated Advanced Melanoma, N Engl J Med 2022; 386:24-34, DOI: 10.1056/NEJMoa2109970

Systemic Immune Effect Leading to Positive Clinical Outcomes

Encouraging data from efti in combination with IO or chemotherapy across multiple oncology indications

immutep
LAG-3 IMMUNOTHERAPY

Efti's subcutaneous delivery drives systemic anti-cancer immune response



First Line Metastatic Non-Small Cell Lung Cancer	Doubling of overall survival and response rates of anti-PD-1 (KEYTRUDA®) monotherapy
Second Line Head & Neck Squamous Cell Carcinoma	Doubling responses of anti-PD-1 (KEYTRUDA®) monotherapy and 8X increase in complete response rate
Metastatic Melanoma	Disappearance of all target tumour lesions for patients with suboptimal response to anti-PD-1 (KEYTRUDA®)
Advanced Solid Tumors (gastric, cervical, etc.)	Durable responses in immuno-oncology insensitive indications with anti-PD-L1 (BAVENCIO®)
Metastatic HR+/HER-2 Negative Breast Cancer	Improved overall survival including significant increases in multiple pre-specified subgroups

Efti + Anti-PD-1 Therapy Efti + Anti-PD-L1 Therapy Efti + Chemotherapy

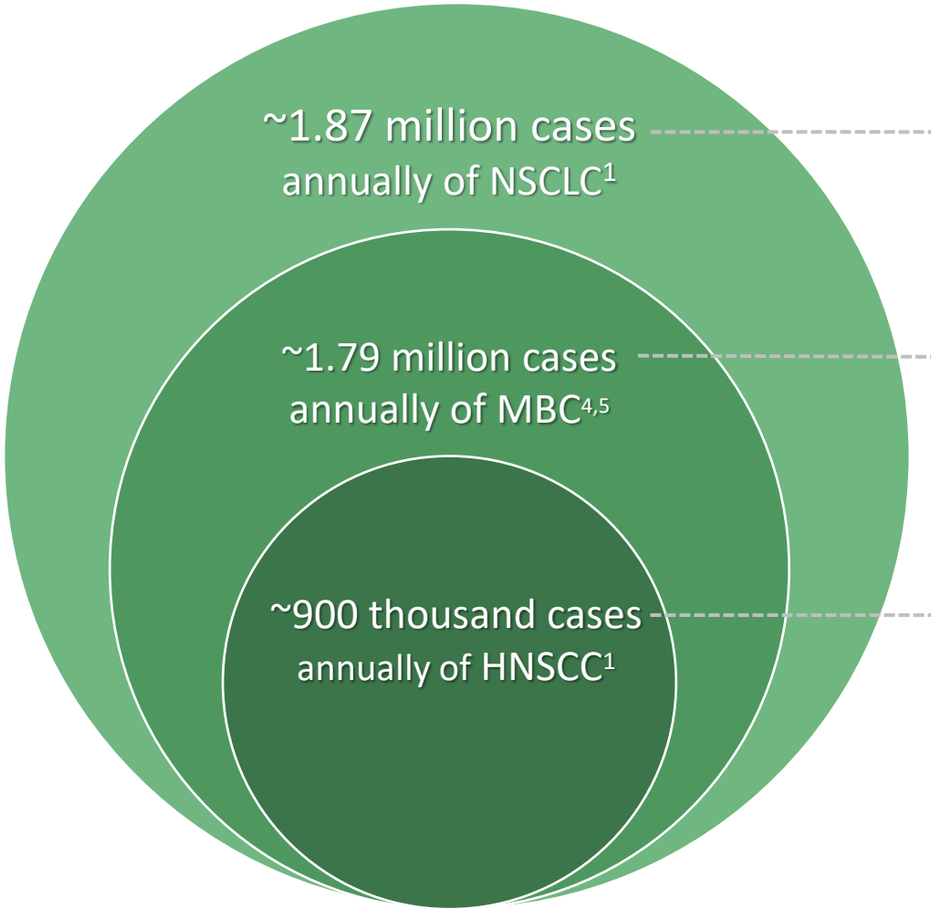
* Based upon clinical data from TACTI-002, INSIGHT-004, TACTI-mel and AIPAC trials.

Commercial Scale Manufacturing of Efti Achieved

- Successful scale-up with first 2,000L manufacturing run completed at WuXi Biologics in December 2022
- Comparability of drug substance and drug product manufactured at 2,000L scale achieved in Sept 2023
- Regulatory authorisation granted for clinical trial use across multiple European countries including:
  - Germany
  - Belgium
  - Denmark
  - United Kingdom

Large Addressable Markets with High Unmet Needs

Efti's three late-stage oncology programs: Lung, Head and Neck, and Breast Cancer



Non-small cell lung cancer (NSCLC) drug market to nearly double to $48 billion in 2031[2]

Metastatic breast cancer (MBC) market to reach $12.7 billion by 2024[6]

Head and neck squamous cell carcinoma (HNSCC) market projected to reach $3.5 billion by 2025[3]

Efti + Anti-PD-1 in First Line Non-Small Cell Lung Cancer (NSCLC)

ASCO 2022 - Dr. Enriqueta Felip presenting 1L NSCLC data from TACTI-002/KN-798 in Oral Presentation

SITC 2022 - Dr. Wade Iams presenting 1L NSCLC data from TACTI-002/KN-798 in Late Breaking Abstract Oral Presentation

ESMO 2023 - Dr. Enric Carcereny presenting Overall Survival Data in 1L NSCLC data from TACTI-002/KN-798

Non-Small Cell Lung Cancer (NSCLC) Overview

Lung cancer is the leading cause of cancer death and 80-85% of the ~2.2 million cases each year are NSCLC.[1]

Immune checkpoint inhibitors (ICI) revolutionized NSCLC treatment yet ~80% patients don't respond to monotherapy

ICI + chemotherapy or ICI + ICI combinations have limited durability and/or higher toxicity & discontinuation rates

Despite treatment advances, Overall Survival is still under 2 years for most NSCLC patients[2]

$48 Billion

Major Market Therapeutic Sales in 2031[3]

$24 Billion

Major Market Therapeutic Sales in 2021[3]

Nature Reviews Drug Discovery 22, 264-265 (23 Jan 2023) doi: https://doi.org/10.1038/d41573-023-00017-9.

TACTI-002 / KN-798 Trial Overview and Baseline Characteristics

Part A: Large Phase II trial (N=114) in metastatic 1st Line non-small cell lung cancer (1L NSCLC)

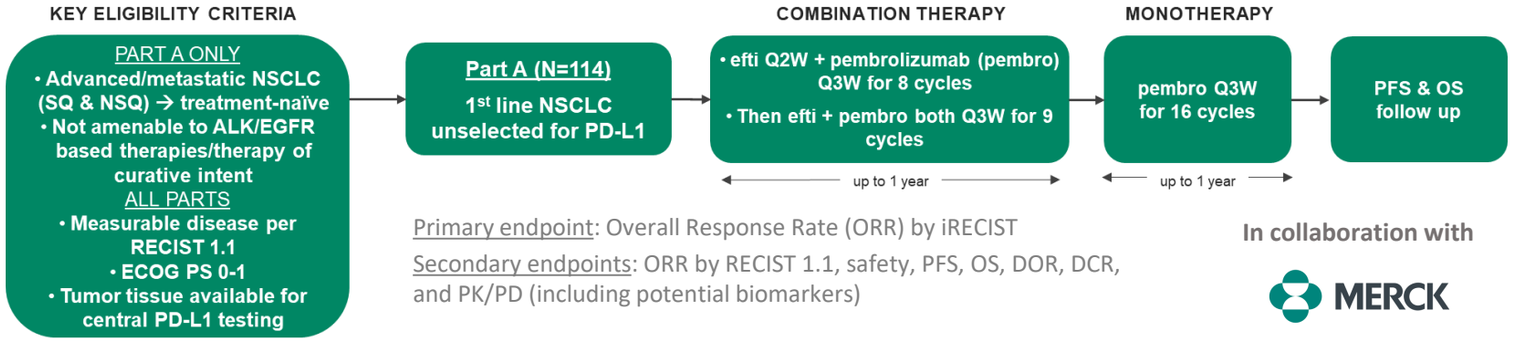
immutep
LAG-3 IMMUNOTHERAPY

Trial Design (Part A)

- Phase II, open label, Simon's two stage
- Six countries (US, UK, ES, PL, UA, AU)
- 114 patients enrolled across 18 sites

PD-L1 Expression

- PD-L1 expression as measured by Tumor Proportion Score (TPS) is an FDA-approved biomarker for ICI therapy, with patients grouped by high (TPS ≥50%), low (TPS 1-49%), any (TPS ≥1%) and negative (TPS <1%) PD-L1 expression
- TACTI-002 enrolled 1L NSCLC patients regardless of PD-L1 expression:
  - ~75% of patients have PD-L1 TPS <50%, with ~35% having negative expression (TPS <1%)
  - Lower proportion of high expressing PD-L1 patients (TPS ≥50%) than would typically be expected



Primary endpoint: Overall Response Rate (ORR) by iRECIST

Secondary endpoints: ORR by RECIST 1.1, safety, PFS, OS, DOR, DCR, and PK/PD (including potential biomarkers)

In collaboration with

MERCK

Baseline characteristics for TACTI-002 Part A		N=114	
Age, median (range), years		67 (44-85)	
Sex, n (%)	Female / Male	30 (26.3) / 84 (73.7)	
ECOG PS score, n (%)	0 / 1	43 (37.7) / 71 (62.3)	
Smoking status, n (%)	Current or Ex-smoker / Non-smoker	108 (94.7) / 6 (5.3)	
Histology, n (%)	Squamous / Non-squamous / Unknown	40 (35.1) / 72 (63.2) / 2 (1.8)	
Metastatic disease, n (%)	Yes / No	113 (99.1) / 1 (0.9)	
PD-L1 expression TPS, n[1] (%)	< 1% 1-49% ≥ 50%	*Central only* 32 (35.6) 38 (42.2) 20 (22.2)	*Central + local* 37 (34.3) 42 (38.9) 29 (26.9)
Previous therapy, n (%)	Radiotherapy Surgery Systemic therapy for non-metastatic disease	38 (33.3) 23 (20.2) 26 (22.8)	

Patients were recruited according to Simon's optimal two-stage design: during the first stage, 17 pts were recruited; second stage recruitment (n=19) was opened only after the number of responses was above 4. An extension stage (n=78) could be added if there were above 12 responses. In total, 114 pts were enrolled.

[1] N=90; Central assessment of PD-L1 TPS using Dako IHC 22C3 pharmDx. [2] N=108; Central assessment as per footnote 1 for 90 pts. For 18 patients, local assessment used predominantly Dako IHC 22C3 pharmDx due to non-evaluable central assessment results.
True response rates sources/assumptions: KN-001 &-042 (KN-001: Lancet Respir Med, 2019; 7(4): 347-357; KN-042: Lancet 2019;393(10183:1819-1830), expecting that ~70% of patients had PD-L1 TPS <50%.

Strong Efficacy Data across all PD-L1 Expression Levels in 1L NSCLC

immutep
LAG-3 IMMUNOTHERAPY

Tumor Response by PD-L1 Expression Level[1]

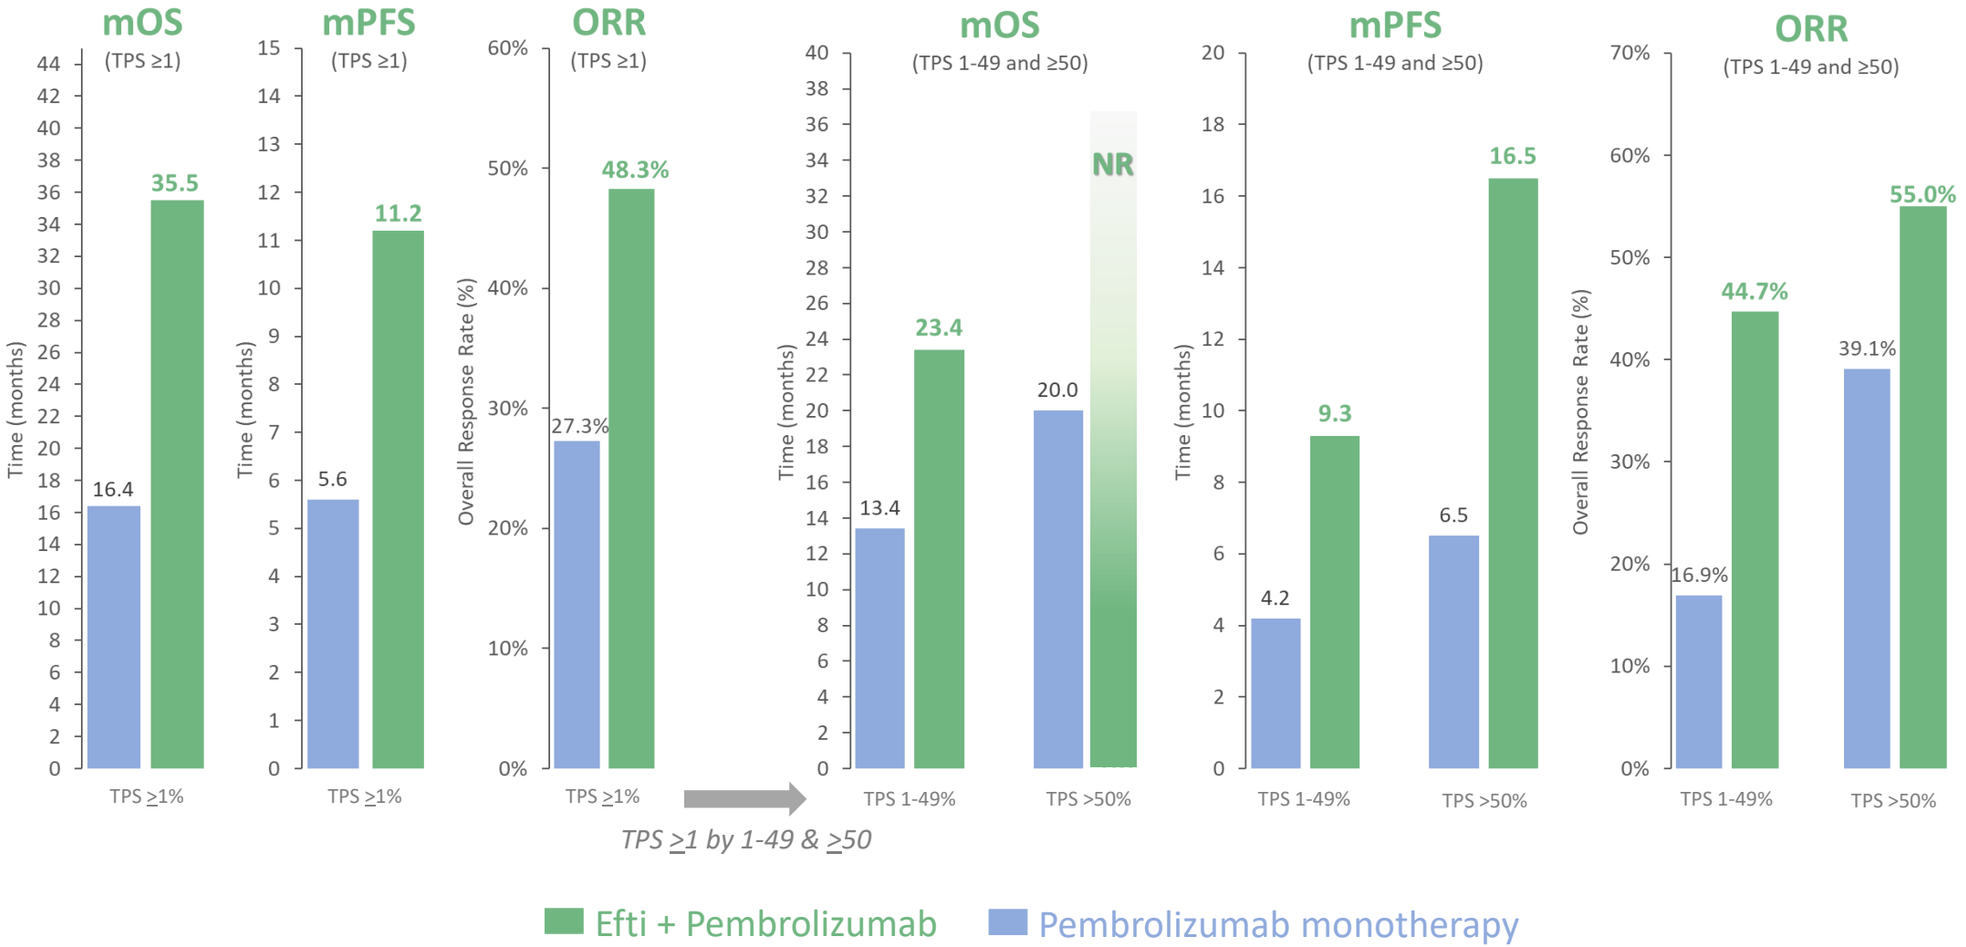
	All-Comer	Negative PD-L1	Low PD-L1	High PD-L1	Any PD-L1
	TPS 0-100% N=114	TPS <1% N=32	TPS 1-49% N=38	TPS ≥50% N=20	TPS ≥1% N=58
ORR[2,3,4]	40.4%	31.3%	44.7%	55.0%	48.3%
mPFS[2], months	6.6	4.2	9.3	16.5	11.2
mDoR[2], months	21.6	20.7	NR	18.7	24.2
mOS, months	**20.2**	**15.5**	**23.4**	**Not Reached**	**35.5**

ORR - Overall Response Rate
mPFS – median Progression Free Survival
mDOR - median Duration of Response
mOS – median Overall Survival

- Strong efficacy visible across all patients, including negative & low expressors (~75% of patients overall), differentiates efti with anti-PD-1 from other IO combinations in 1L NSCLC
- Excellent Overall Survival, the gold standard benchmark in oncology
- Exceptional durability and quality of responses
- Results offer compelling evidence of efti's unique stimulation of patients' immune systems and the positive impact that has in fighting cancer

Data cut-off date: August 15, 2023. Median follow-up 25.1 months. [1] N=90; Central assessment of PD-L1 TPS using Dako IHC 22C3 pharmDx; [2] iRECIST; [3] unconfirmed; [4] calculated using Clopper Pearson method; NR: not reached.
Note: results for PD-L1 central + local (N=108) were as follows (<1% / 1-49% / ≥50% / ≥1%): mOS, mo: 14.4 / 23.4 / 38.8 / 35.5; mPFS[2]: 4.2 / 8.3 / 16.3 / 9.8; mDoR[2]: 20.7 / 21.6 / 18.7 / 21.6.

Benchmarking to Pembrolizumab Monotherapy



- Robust response rates, progression free survival, and overall survival from efti plus pembro that all compare favorably to reported results from pembro alone
- Strength of data in TPS 1-49% is contributing significantly to overall results in TPS ≥1% unlike other IO-IO combos

Sources:Pembrolizumab monotherapy data from publications/EPAR asessment report of KN-042 registrational trial

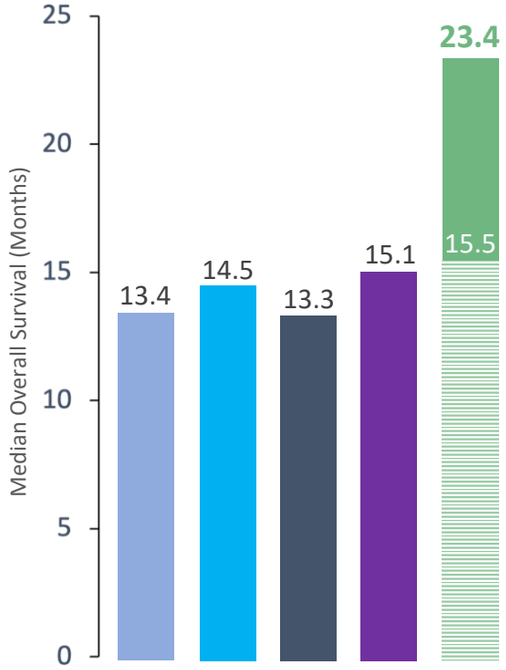
* In TPS ≥1%, TACTI-002 has 66% patients with TPS 1-49% and 34% with TPS ≥50%, which compares to KN-042 with ~53% patients with PD-L1 and ~47% patients with PD-L1 TPS ≥50%.

Benchmarking to Chemo-Free Therapies in Low PD-L1 (TPS 1-49%)

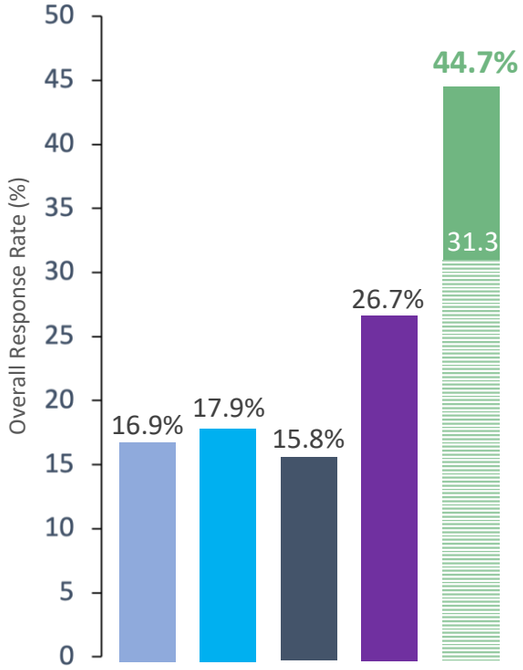
Efti + pembro results in low & negative PD-L1 patients compare favorably to other therapies in low PD-L1

immutep
LAG-3 IMMUNOTHERAPY

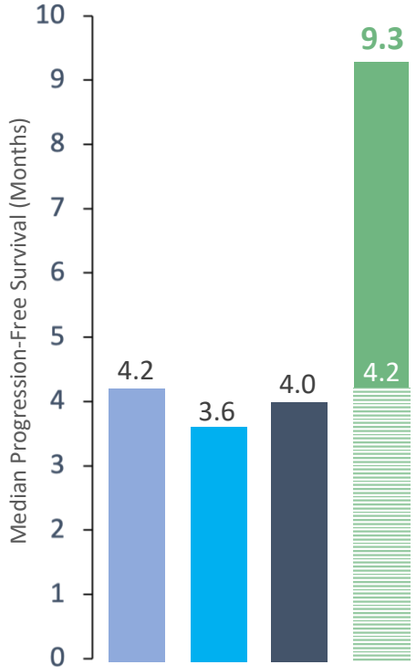
mOS
TPS 1-49%



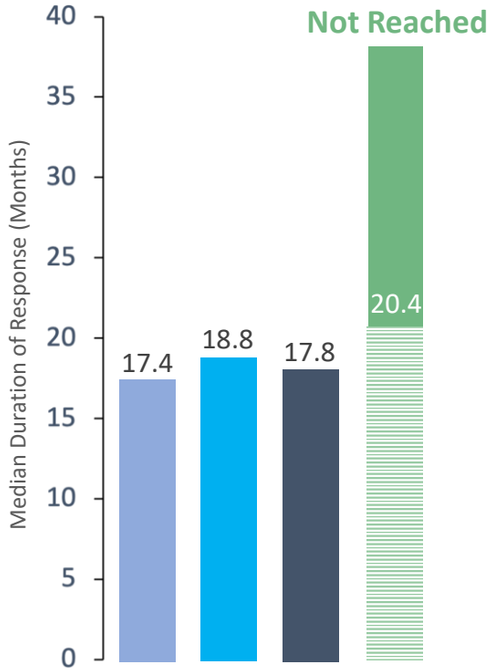
ORR
TPS 1-49%



mPFS
TPS 1-49%



mDOR
TPS 1-49%



Chemotherapy-Free IO Therapies

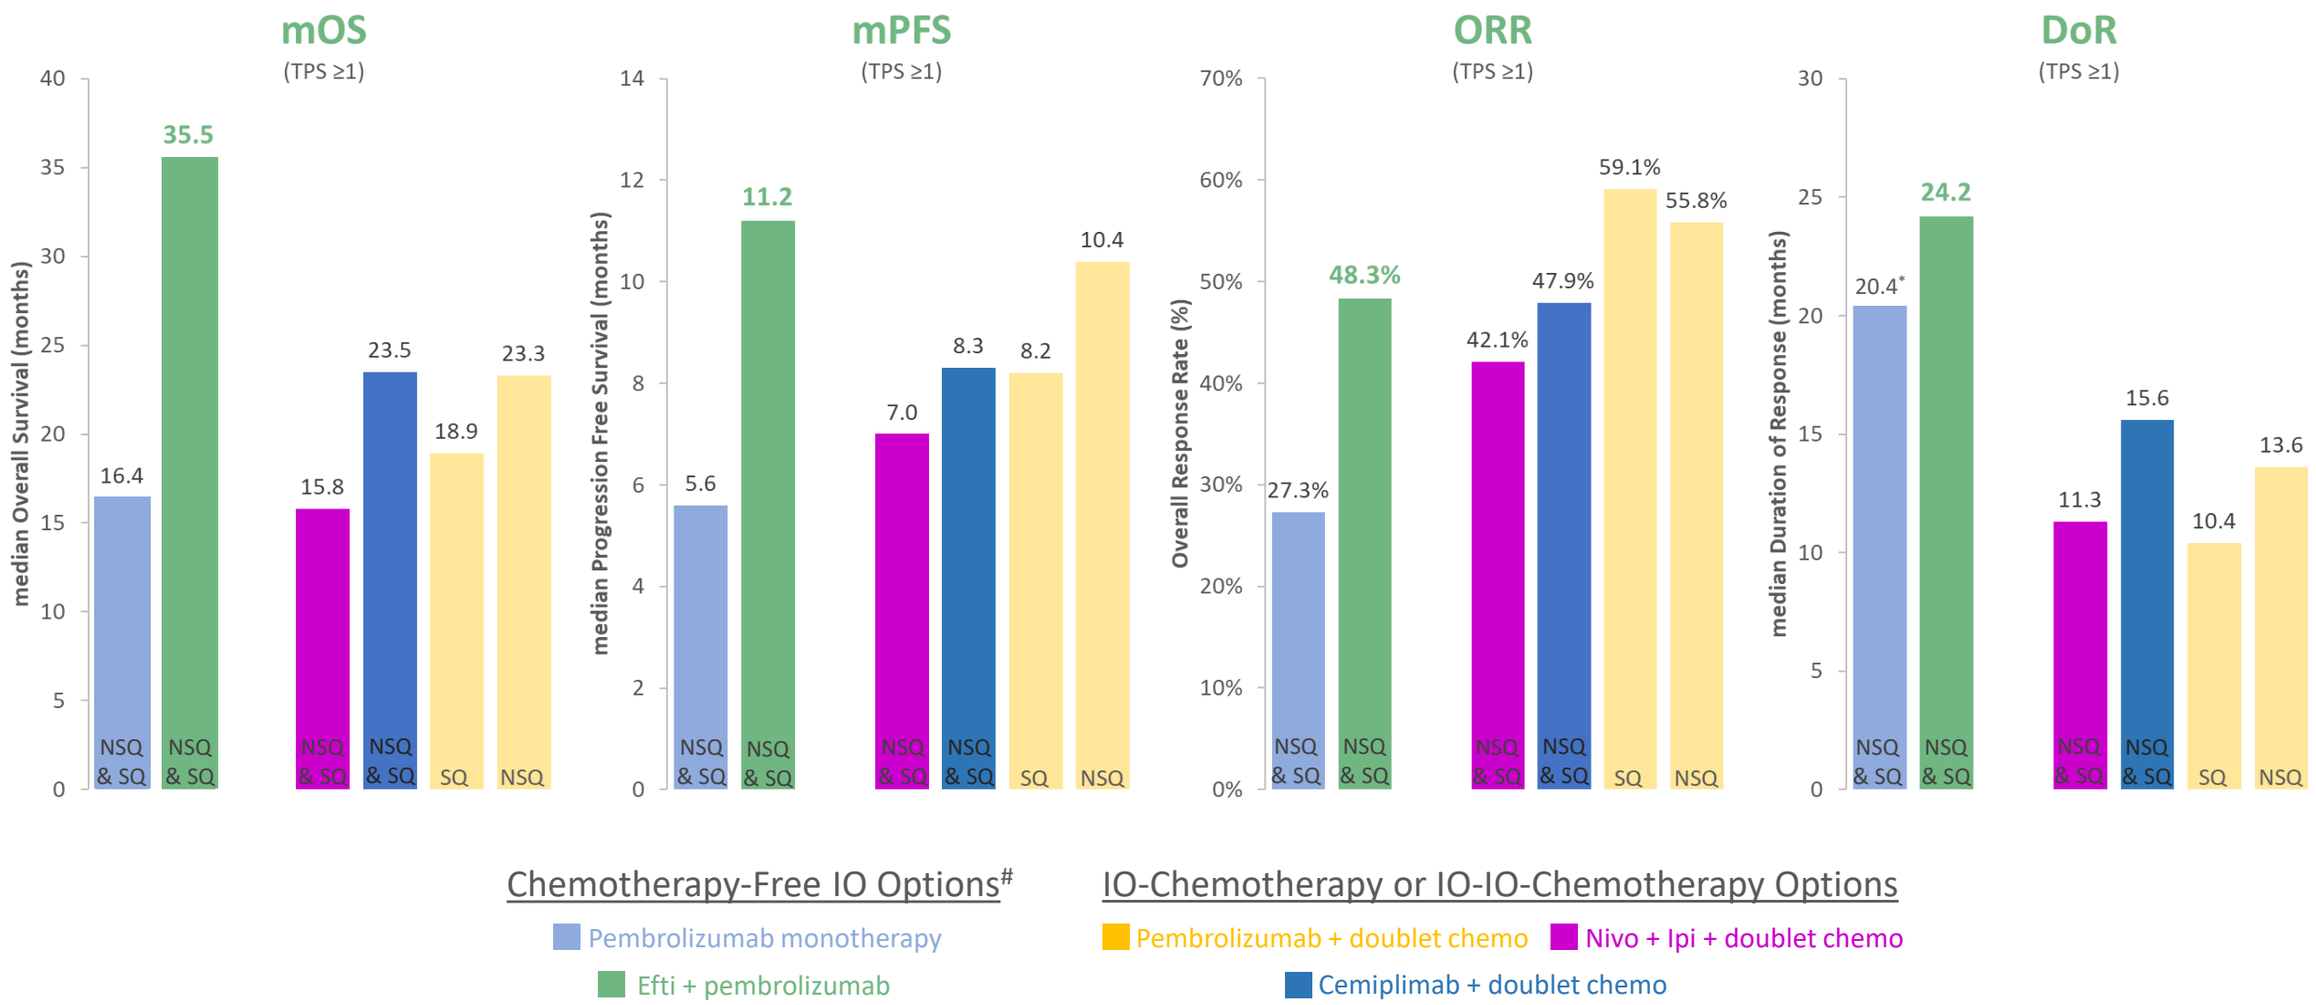
- Pembrolizumab monotherapy
- Atezolizumab monotherapy
- Tiragolumab + Atezolizumab (anti-TIGIT) (anti-PD-L1)
- Ipilimumab + Nivolumab (anti-CTLA-4) (anti-PD-1)
- Efti + Pembrolizumab
- Efti + Pembrolizumab in PD-L1 TPS <1%

(Note: negative PD-L1 expressing patients typically have negligible responses to ICI therapies and are not expected to perform as well as low PD- L1 expressing patients)

Sources: Pembrolizumab monotherapy data from publications/EPAR asessment report of KN-042 registrational trial , Atezolizumab and Tiragolumab + Atezolizumab data from CITYSCAPE Phase II trial. Ipilimumab + Nivolumab from CM-227 registrational trial (did not include mPFS or mDOR data).

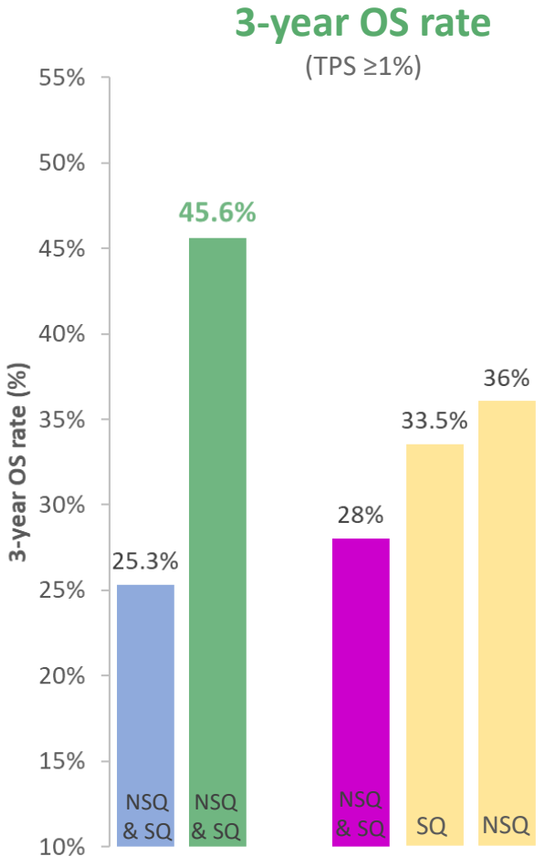
Benchmarking Efficacy to Standard-of-Care in PD-L1 TPS ≥1%

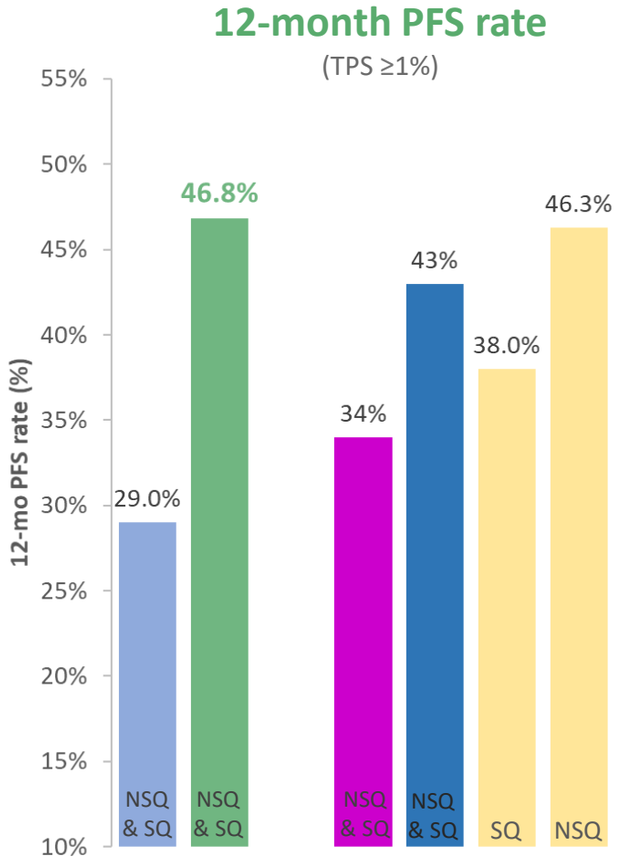
Efti + anti-PD-1 therapy has FDA Fast Track designation in 1L NSCLC TPS ≥1%



NSQ = Non-squamous NSCLC and SQ = Squamous NSCLC. Data for standard-of-care therapies taken from publications/EPAR assessment report of respective registrational trials (e.g., KN-042, KN-189, KN-407, CM-9LA, EMPOWER-Lung 3), and comparison of data is from different clinical trials. *Pembro monotherapy DOR of 20.4 months based on similar 2-year median follow up as compared to TACTI-002 Phase II median follow-up of 25.1 months. # In the TPS ≥1% patient population TACTI-002 has 66% patients with TPS 1-49% and 34% with TPS ≥50%, which compares to KN-042 with ~53% patients with PD-L1 1-49% and ~47% patients with PD-L1 TPS ≥50%.

Exceptional Durability and Quality of Responses





Chemotherapy-Free IO Options#

- Pembrolizumab monotherapy
- Efti + pembrolizumab

IO-Chemotherapy or IO-IO-Chemotherapy Options

- Pembrolizumab + doublet chemo
- Nivo + Ipi + doublet chemo
- Cemiplimab + doublet chemo

- Exceptional 3-year Overall Survival rate of 45.6%, superior to pembro alone and chemo-containing regimens
- Positive 12-month PFS rate of 46.8%, superior to pembro alone and inline to above chemo-containing regimens
- Efti + pembro may be in a unique position to lift the tail of the survival curve

NSQ = Non-squamous NSCLC and SQ = Squamous NSCLC. Data for standard-of-care therapies taken from publications of respective registrational trials (e.g., KN-042, KN-189, KN-407, CM-9LA, EMPOWER-Lung 3), and comparison of data is from different clinical trials. # In the TPS ≥1% patient population TACTI-002 has 66% patients with TPS 1-49% and 34% with TPS ≥50%, which compares to KN-042 with ~53% patients with PD-L1 1-49% and ~47% patients with PD-L1 TPS ≥50%.

Favorable Safety

Differentiated OS from **Efti + Pembro** achieved with a **favorable safety profile** given complementary IO approaches targeting two different immune cells as well as no use of chemotherapy

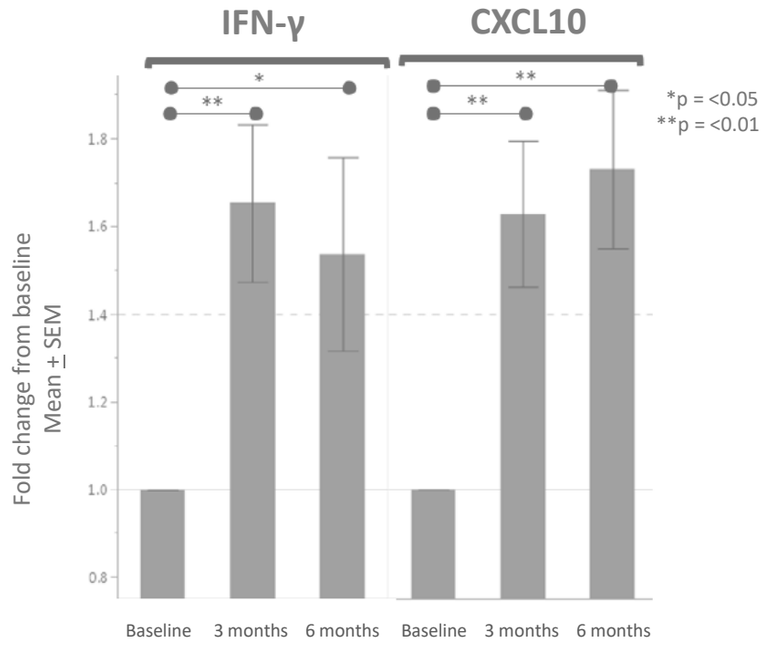
Therapy in 1L NSCLC TPS ≥1%	Drug-related Adverse Events Leading to Discontinuation[2]	Median Overall Survival[3]
Efti + Pembrolizumab	**9.6%**	**35.5 months**
Pembro + Doublet Chemo (NSQ)	20.5%	23.3 months
Pembro + Doublet Chemo (SQ)	16.8%	18.9 months
Ipilimumab + Nivolumab[1]	18.1%	17.1 months
Pembrolizumab monotherapy[1]	**9.9%**	16.4 months
Ipi + Nivo + 2 cycles of Doublet Chemo	22.1%	15.8 months

NSQ = Non-squamous; SQ = Squamous

1. Ipilimumab + Nivolumab approved in US for 1L NSCLC PD-L1 TPS>1% but not in EU; Pembro mono not approved in Europe for TPS 1-49%. 2. Treatment related adverse events leading to discontinuation taken from publications/EPAR assessments of respective trials (KN-042, KN-024, KN-189, KN-021, KN-407, CM-227, CM-9LA). 3. Arrow lengths are proportional representations of Overall Survival data. Data for standard-of-care therapies taken from publications of respective registrational trials (e.g., KN-042, KN-189, KN-407, CM-227, CM-9LA), and comparison of data is from different clinical trials.

Th1 Biomarker Data Linked to Improved Clinical Outcomes

Significant, sustained increases in Th1 biomarkers substantiates efti's unique stimulation of immune system in TACTI-002



- 86% of responders showed a ≥1.4-fold change of IFN-γ & 100% showed a ≥1.4-fold change of CXCL10 after first efti dosing
- Similar increase in Th1 biomarkers seen in AIPAC randomized Phase IIb trial, which combined efti solely with chemotherapy

CXCL10 may be an important biomarker with anti-PD-1 therapies*

"Strategies that support effector T cell recruitment via induction of CXCL10 should be considered as a mechanism-based intervention to expand immunotherapy efficacy." [1]

Journal for ImmunoTherapy of Cancer

"…Chemokines CXCL9/10 are indispensable for robust responses to immune checkpoint inhibitors (anti-PD-1 and anti-CTLA-4)…" [2]

CLINICAL CANCER RESEARCH

"CXCL9 and CXCL10 bring the heat to tumors" [3]

Science Immunology

"Circulating CXCL10 at baseline appeared to be a robust predictor of response." [4]

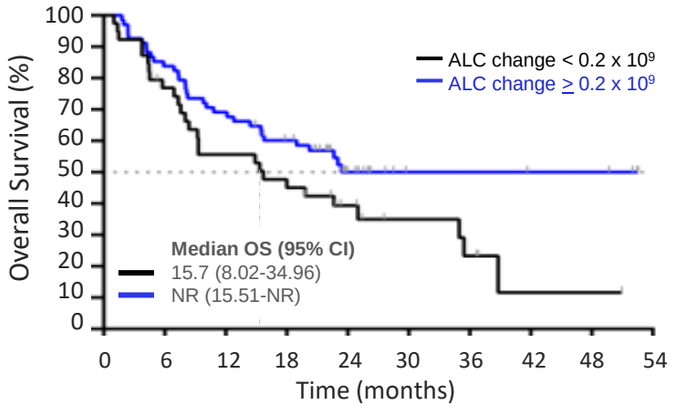
ALC Biomarker Data Links Efti to Improved Overall Survival

Early increase in Absolute Lymphocyte Count (ALC) tied to Overall Survival in two different trials

immutep
LAG-3 IMMUNOTHERAPY

1L Non-Small Cell Lung Cancer - TACTI-002 Phase II

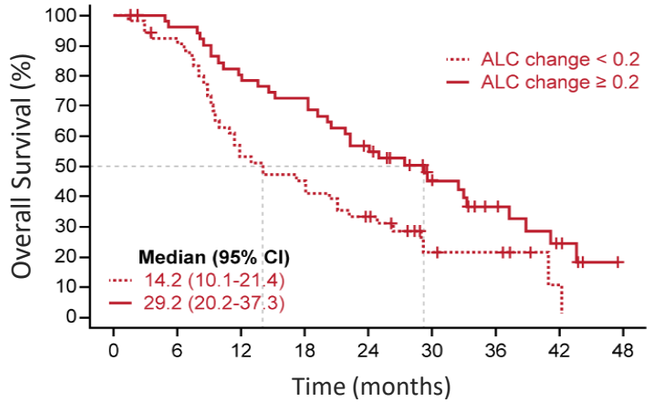
Efti + Pembrolizumab (anti-PD-1)



>30 months OS gain
P value = 0.029

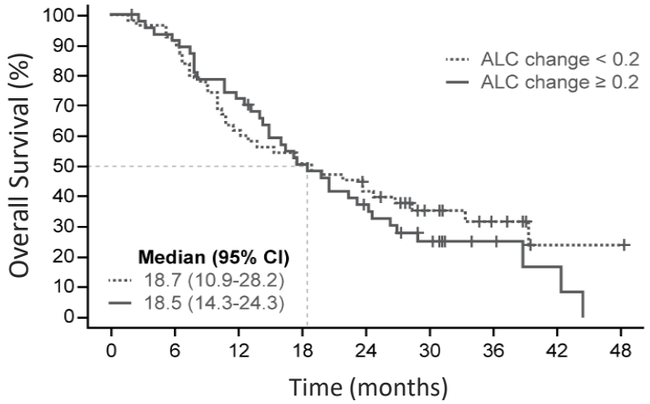
Metastatic Breast Cancer - AIPAC Randomized, Double-Blind Phase IIb

Efti + Paclitaxel (chemotherapy)



15 months OS gain
P value = 0.003

Placebo + Paclitaxel



No OS gain
P value = 0.246

In trials combining efti with anti-PD-1 therapy (TACTI-002) and efti with chemotherapy (AIPAC), an early increase in ALC* is significantly associated with improved Overall Survival (OS)

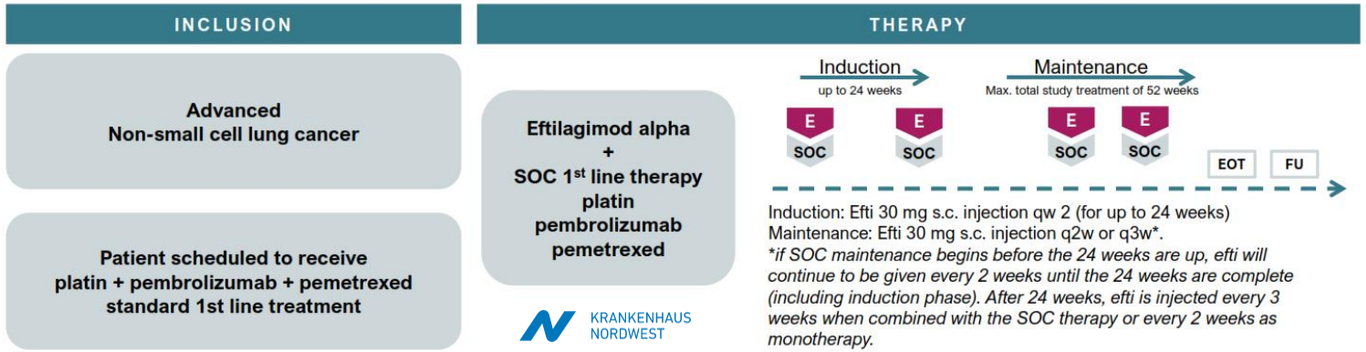
* Within first 9 weeks (before 4th cycle)

INSIGHT-003: IO-IO-Chemo Combination Trial in 1L NSCLC

Promising initial efficacy & safety from first-in-human study evaluating efti + anti-PD-1 + doublet chemo

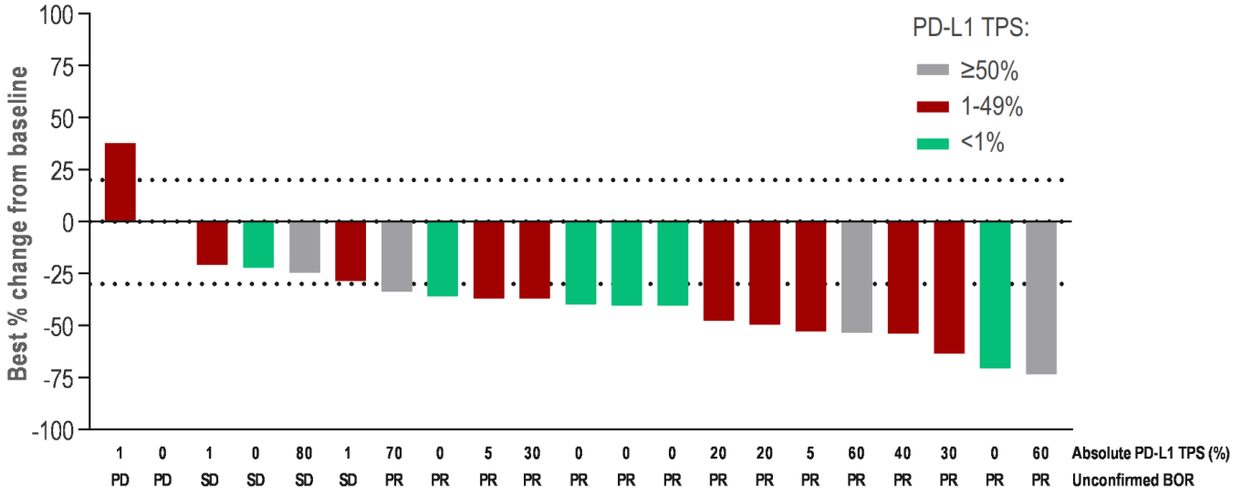
immutep
LAG-3 IMMUNOTHERAPY

INSIGHT-003 - Investigator-initiated study in first line non-squamous NSCLC

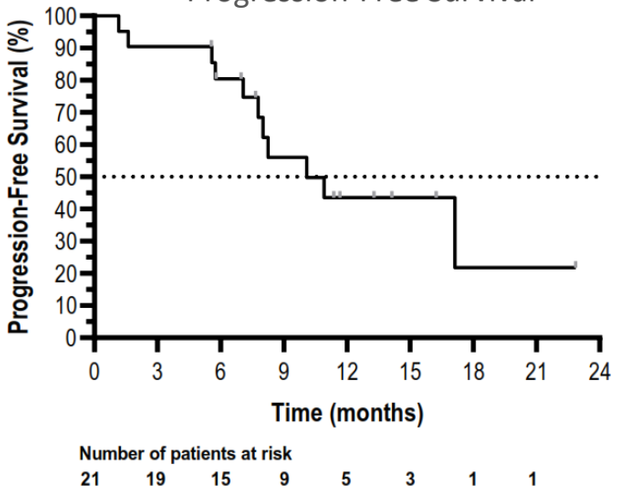


- Triple combination has been well tolerated & appears to be safe
- At data cut-off, unconfirmed ORR of 71.4% (confirmed ORR of 66.7%)
- mPFS of 10.1 months and mOS was not reached in ITT population (median follow up 12.4 months)

Best Overall Response by PD-L1 Status



Progression-Free Survival



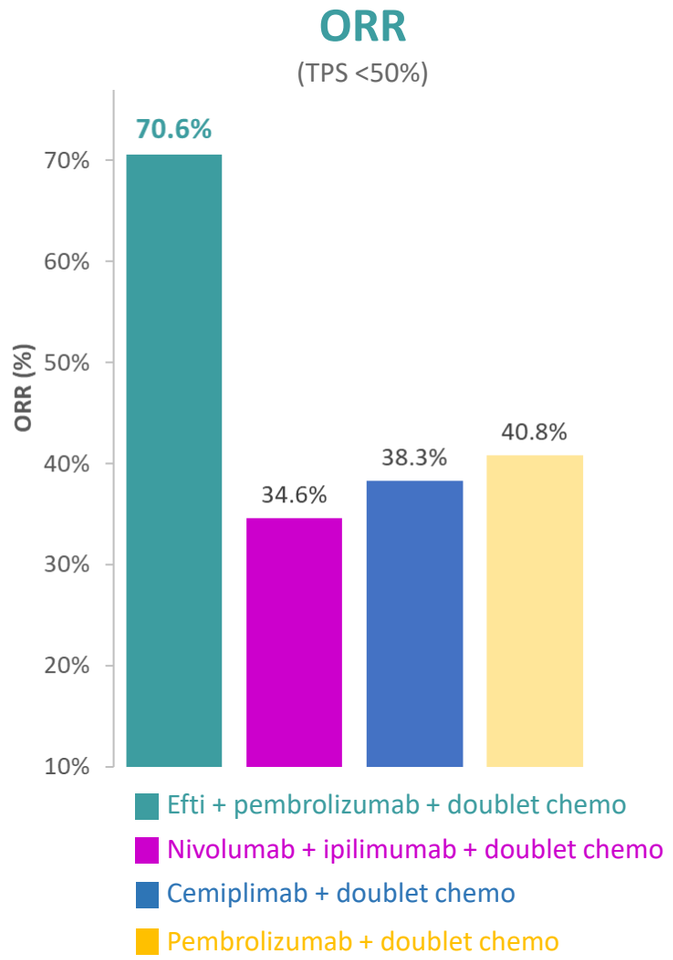
Source: ESMO 2023 Poster (#1042P) – A Atmaca et al., INSIGHT 003 evaluating feasibility of eftilagimod alpha (soluble LAG-3) combined with 1st line chemo-immunotherapy in metastatic non-small cell lung cancer (NSCLC) adenocarcinomas – a multicenter early phase trial.

Efti + Anti-PD-1 + Chemotherapy versus SoCs in PD-L1 TPS <50%

Tumor Response	PD-L1 expression level (TPS)			
	<1%, N=7	1-49%, N=10	≥50%, N=4	<50%, N=17
ORR* unconfirmed, n (%)	5 (71.4)	7 (70.0)	3 (75.0)	12 (70.6)
ORR* confirmed, n (%)	5 (71.4)	6 (60.0)	3 (75.0)	11 (64.7)
mPFS*, months (% events)	10.1 (42.9)	10.9 (60.0)	7.1 (50.0)	10.9 (52.9)
mOS, months (% events)	17.4 (28.6)	NR (10)	NR (25)	NR (17.6)

* Per RECIST 1.1.

INSIGHT-003 data compares favorably to registrational trials of standard-of-care anti-PD-1 and chemotherapy combinations, including ORR between 34.6% to 40.8%, in the same PD-L1 TPS <50% patient population.[1,2]



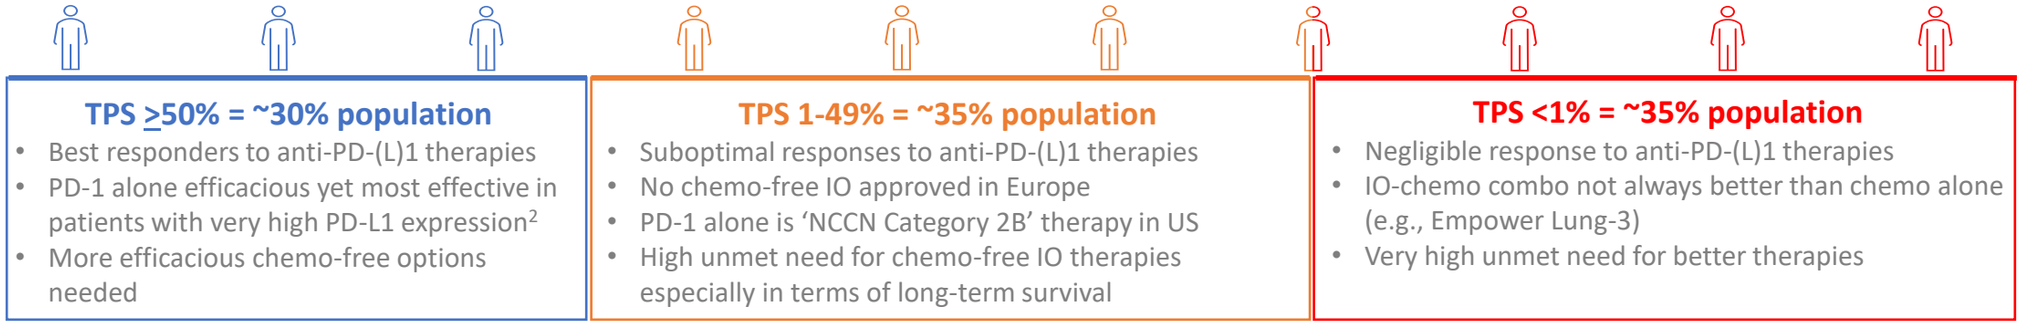
Source: ESMO 2023 Poster (#1042P) – A Atmaca et al., INSIGHT 003 evaluating feasibility of eftilagimod alpha (soluble LAG-3) combined with 1st line chemo-immunotherapy in metastatic non-small cell lung cancer (NSCLC) adenocarcinomas – a multicenter early phase trial.

Journal of Clinical Oncology 2020 38:14, 1505-1517, Updated Analysis From KEYNOTE-189: Pembrolizumab or Placebo Plus Pemetrexed and Platinum for Previously Untreated Metastatic Nonsquamous Non–Small-Cell Lung Cancer; EMPOWER-Lung 3: EPAR Assessment Report MA/CHMP/118736/2023 of 23 February 2023; CheckMate 9LA: M. Reck et al. Lancet Oncol 2021, https://doi.org/10.1016/j.esmoop.2021.100273. 2. EMPOWER-Lung 3 (Cemiplimab + doublet chemo) and CM-9LA data includes squamous patients as well.

Efti Uniquely Positioned in First line Non-Small Cell Lung Cancer

1L NSCLC Patient Population by PD-L1 Tumor Proportion Score (TPS)[1]

Strength of the clinical data presented at ESMO 2023, SITC 2022, and ASCO 2022 shows *efti has significant potential to address all PD-L1 levels*



TPS ≥50% = ~30% population

- Best responders to anti-PD-(L)1 therapies
- PD-1 alone efficacious yet most effective in patients with very high PD-L1 expression[2]
- More efficacious chemo-free options needed

TPS 1-49% = ~35% population

- Suboptimal responses to anti-PD-(L)1 therapies
- No chemo-free IO approved in Europe
- PD-1 alone is 'NCCN Category 2B' therapy in US
- High unmet need for chemo-free IO therapies especially in terms of long-term survival

TPS <1% = ~35% population

- Negligible response to anti-PD-(L)1 therapies
- IO-chemo combo not always better than chemo alone (e.g., Empower Lung-3)
- Very high unmet need for better therapies

65% patient population, >$10 billion TAM

70% patient population, >$10 billion TAM

Strategy A: Chemo-free IO-IO

Goal: **Create an efficacious chemo-free regimen for 1L NSCLC patients** with TPS ≥1% without actionable mutations.

Strategy B: Chemo-IO-IO

Goal: **Create a new standard** for 1st line NSCLC patients with TPS <50% without actionable mutations.

1. Patient population estimates by PD-L1 expression: based on publications of registrational trials KN-001, KN-189, KN-407, EMPOWER-Lung 3 and TACTI-002 all comer Phase II trial. (2) Aguilar et al. Ann. Onc. 2019, 1;30(10):1653-1659. DOI: 10.1093/annonc/mdz288

Efti + pembrolizumab

Pembrolizumab monotherapy#

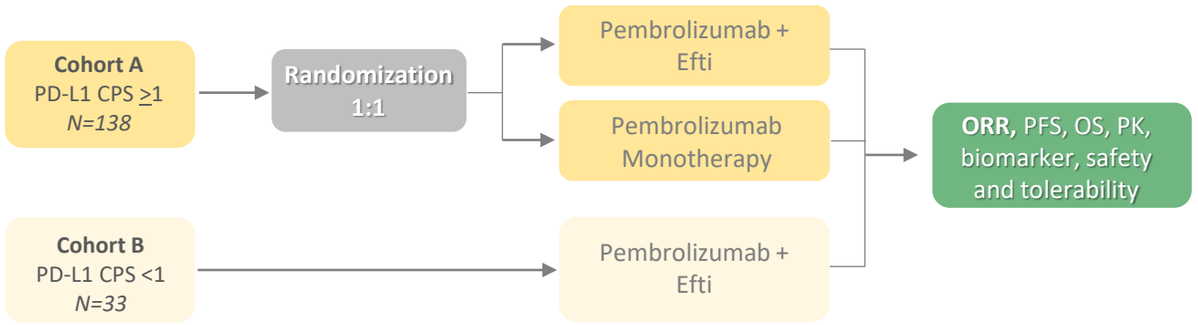
Data from Final results from TACTI-002 Part C: A Phase II study of eftilagimod alpha (soluble LAG-3 protein) and pembrolizumab in patients with metastatic 2nd line head and neck squamous cell carcinoma unselected for PD-L1 – ASCO 2023. #Data for Keytruda (pembrolizumab monotherapy or 'pembro mono') derived from KN-040 trial.

TACTI-003 - Randomised Phase IIb in First Line HNSCC

Efti + anti-PD-1 therapy has FDA Fast Track designation in first line recurrent or metastatic HNSCC

TACTI-003/KEYNOTE-PNC-34: First Line Recurrent or Metastatic Head & Neck Squamous Cell Carcinoma (1L HNSCC)

TACTI-003 / KEYNOTE-PNC-34 Trial Design



- Randomised, multicentre Phase IIb trial evaluating efti in combination with pembrolizumab (KEYTRUDA®) completed enrollment in Nov 2023
- A total of 171 patients enrolled:
  - 138 patients in 1:1 randomised Cohort A evaluating efti + KEYTRUDA® versus KEYTRUDA® monotherapy. Cohort A has patients whose tumours express PD-L1 (CPS ≥1), with CPS 1-19 and CPS ≥20 used as stratification factors. Clinical results for these three CPS groups will be evaluated.
  - 33 patients in Cohort B. This cohort includes patients with negative PD-L1 expression (CPS <1). These patients only receive efti plus KEYTRUDA® because anti-PD-1 monotherapy is ineffective in CPS <1.
- Expect to report first data in H1 CY2024

Pembrolizumab monotherapy approved for 1st line HNSCC patients whose tumors express PD-L1 (CPS ≥1) and pembrolizumab with chemo approved for 1st line HNSCC in all-comer PD-L1 population. FDA approval based on KN-048.
Immutep conducts this clinical trial and has a clinical trial collaboration and supply agreement with Merck & Co., Inc., Kenilworth, NJ, USA (known as MSD outside the US and Canada).

LAG-3 IMMUNOTHERAPY

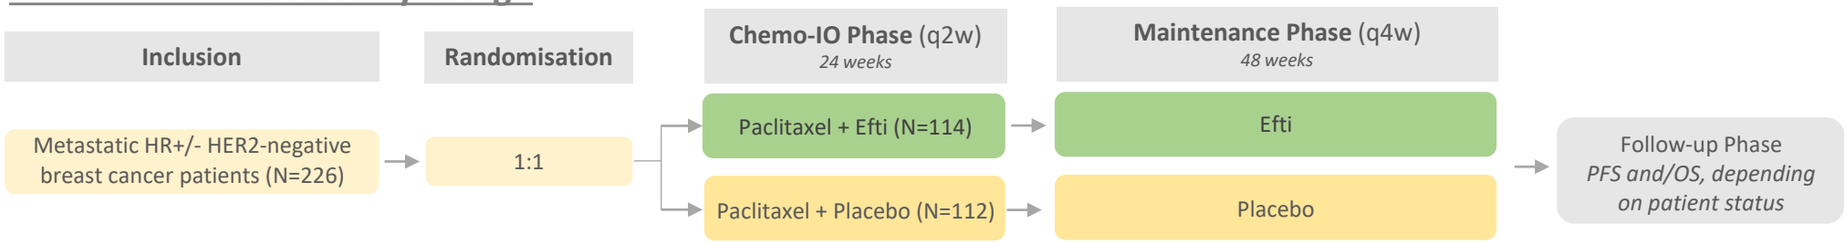
Efti + Chemotherapy in Metastatic Breast Cancer

Efti + Chemo in Randomized Phase IIb in Metastatic Breast Cancer

Broad anti-cancer immune response generated from efti in combination with paclitaxel

AIPAC: **A**ctive **I**mmunotherapy and **PAC**litaxel - Double blind, 1:1 randomized Phase IIb trial with 226 patients evaluating efti + paclitaxel (N=114) and paclitaxel + placebo (N=112)

AIPAC Randomized Study Design



AIPAC was conducted in 34 sites across: Belgium, France, Hungary, Poland, Netherlands, United Kingdom, and Germany

Pharmacodynamic Analysis of Efti with Chemotherapy:

Significant increase in adaptive/innate immune response observed in AIPAC*

Activated CD8+ T Cells	Effector Memory CD8+ T Cells	Activated CD4+ T Cells	Peripheral Dendritic Cells	Myeloid Dendritic Cells	Monocytes	NK Cells	Absolute Lymphocytes	Interferon-gamma	CXCL10
✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

* Biomarker and multivariate analyses results from AIPAC: A phase IIb study comparing eftilagimod alpha (a soluble LAG-3 protein) to placebo in combination with weekly paclitaxel in HR + HER2 - metastatic breast carcinoma – ESMO Breast 2022; Combination of paclitaxel and a LAG-3 fusion protein (eftilagimod alpha), as a first-line chemoimmunotherapy in patients with metastatic breast carcinoma (MBC): Final results from the run-in phase of a placebo-controlled randomized phase II – ASCO 2018

Fold Change of Key Biomarkers Compared to Baseline in AIPAC

ESMO BREAST CANCER
Onsite and Online Congress
BERLIN GERMANY
3-5 MAY 2022
Abstract #171P

Biomarker	Treatment	Fold change mean ± SEM Median (25%Q-75%Q) [Min-Max]	p-value (2-sided rank-sum Wilcoxon test)
Monocytes	efti (n=42)	**5.81** ±1.49 **2.07** (1.40-5.16) [0.63-56.00]	0.025
	Placebo (n=34)	**2.29** ±0.44 **1.47** (1.21-2.23) [0.09-13.57]	
Activated CD4 T cells	efti (n=45)	**2.17** ±0.23 **1.56** (1.07-3.14) [0.42-7.13]	0.206
	Placebo (n=35)	**1.54** ±0.13 **1.31** (1.05-1.84) [0.26-4.14]	
Activated CD8 T cells	efti (n=42)	**2.54** ±0.35 **1.76** (1.10-3.25) [0.35-10.75]	0.027
	Placebo (n=34)	**1.86** ±0.40 **1.17** (0.79-1.67) [0.20-13.14]	
CXCL10	efti (n=32)	**2.78** ±0.30 **2.39** (1.36-3.93) [0.67-7.25]	0.006
	Placebo (n=22)	**1.56** ±0.18 **1.40** (0.86-2.18) [0.35-3.17]	

- Efti with paclitaxel significantly increases primary target cells (monocytes), secondary target cells (CD4* & CD8 T cells), and the chemokine CXCL10, which were not observed in the placebo group
- Absolute lymphocyte count (ALC) showed early and sustainable increase within efti arm
- Note, increases in ALC, IFN-γ and CXCL10 also seen in clinical trial with efti in combination with anti-PD-1 therapy and no chemotherapy (TACTI-002)

Biomarker and multivariate analyses results from AIPAC: A phase IIb study comparing eftilagimod alpha (a soluble LAG-3 protein) to placebo in combination with weekly paclitaxel in HR + HER2 - metastatic breast carcinoma – ESMO Breast 2022
* Increase in CD4 not statistically significant

Substantial Increase in CD8+ T Cells Correlated to Stronger OS

Immune system stimulation & synergies with chemotherapy led to encouraging efficacy/safety

AIPAC-003 Phase II/III Trial Underway in Metastatic Breast Cancer

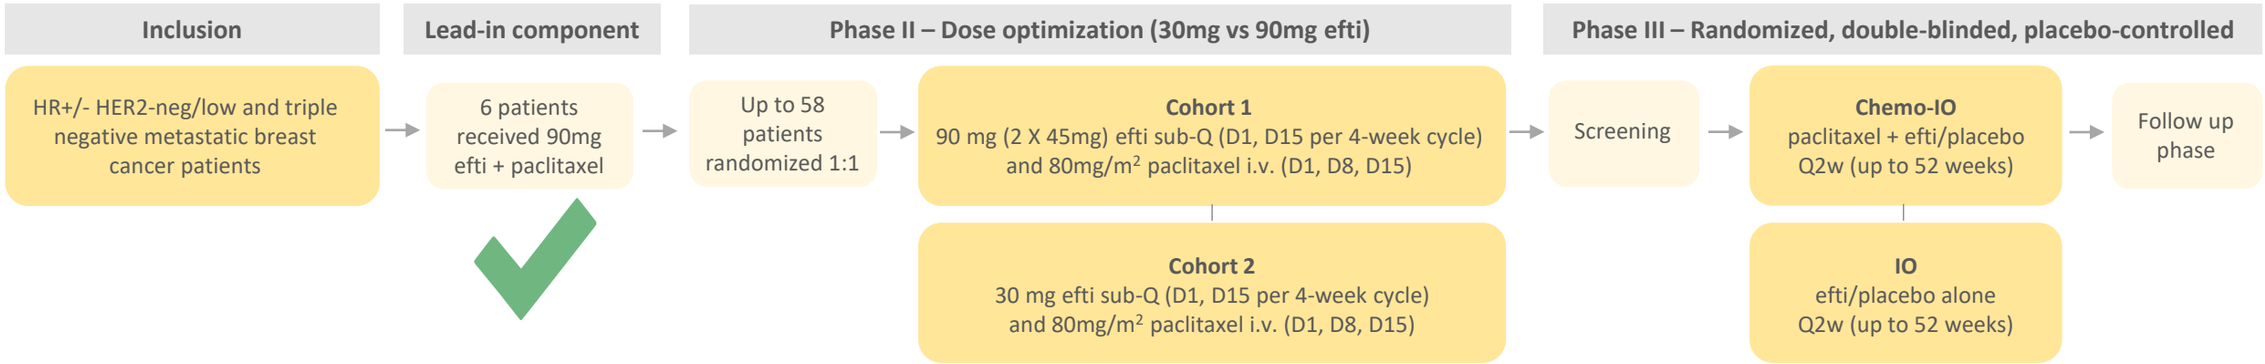
immutep
LAG-3 IMMUNOTHERAPY

AIPAC-003: **A**ctive **I**mmunotherapy (Eftilagimod Alpha) and **PAC**litaxel

AIPAC-003: Integrated Phase II/III trial in Metastatic Breast Cancer (MBC)

- Trial design incorporates feedback from FDA & EMA and provides risk-balanced approach
- Patient population: HR+/- HER2-negative/low and triple negative MBC (~78% breast cancer cases[1])
- Patients will receive efti + paclitaxel on same day and IO-chemo treatment can continue until disease progression (previous trial administered on different days & ceased paclitaxel at 6 months)
- Completed safety lead-in in November 2023; randomized Phase II dose optimization underway

AIPAC-003 Study Design



1. Cancer Stat Facts: Female Breast Cancer Subtypes - NCI SEER, World Health Organization; Breast Cancer Fact Sheet.

Additional Oncology Indications and Studies

Efti + Anti-PD-L1 (Avelumab) in Metastatic Urothelial Cancer

INSIGHT-004 – Completed Phase I dose escalation study in advanced solid tumors*

- Efti in combination with avelumab (BAVENCIO®) safe with promising signals of efficacy in 12 patients
- 5/12 partial responses (42%) in different solid tumors**
- Encouragingly, durable responses achieved in patients with low & negative PD-L1 expression and in non-immunogenic tumors

INSIGHT-005 – Ongoing Phase I study in metastatic urothelial cancer

- Investigator-initiated study evaluating safety & efficacy of efti and avelumab (BAVENCIO®) in up to 30 patients
- Jointly funded by Immutep & Merck KGaA, Darmstadt, Germany
- Targeting area of high unmet need: patients not eligible for platinum-based chemotherapy or who are progressing during/after platinum-based chemotherapy
- Announced first patient enrolled and safely dosed in Jan 2024

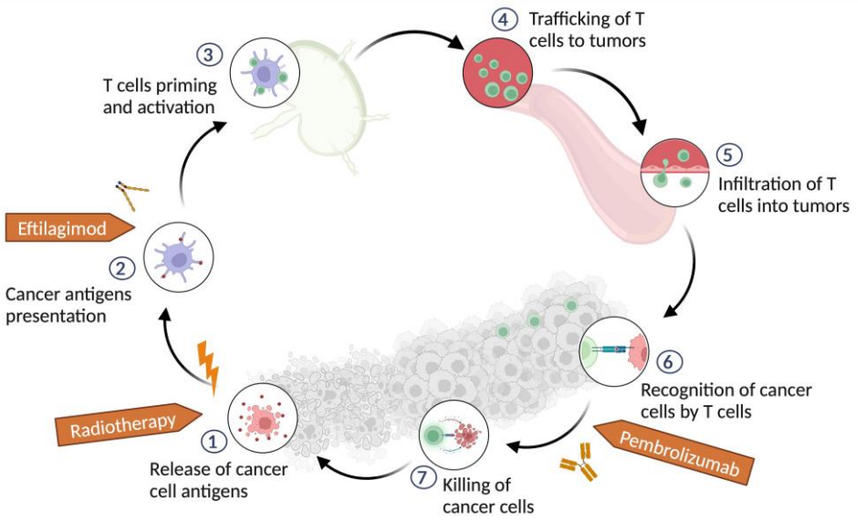
Państwowy Instytut Badawczy



*Pembrolizumab in combination with eftilagimod alpha and radiotherapy in neoadjuvant treatment of patients with soft tissue sarcomas - EFTISARC-NEO trial – Trial in Progress Poster at ESMO 2023. ** Blood samples and tumor biopsies will be taken for translational studies.

Novel Small Molecule Anti-LAG-3 Preclinical Program

Collaboration established in 2019 combining Immutep's deep LAG-3 biology experience and expertise of world leading scientists at Cardiff University

"We are delighted to collaborate with Immutep on this important project to develop a **small molecule anti-LAG-3** treatment for cancer patients that could offer the **convenience of a tablet or capsule at a fraction of the cost of existing anti-LAG-3 candidates**."

Professor Andrew Godkin, Theme Lead in Immunology in the College of Biomedical Life Sciences, Cardiff University*

* 8 June 2021, Immutep Reveals a New anti-LAG-3 Research Program

IMP761 & Summary

Targeting Autoimmune Disease with Immune Checkpoint Agonists

ELSEVIER

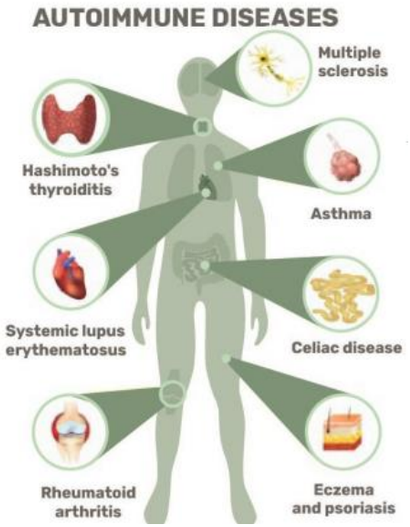
Current Opinion in Immunology

Volume 67, December 2020, Pages 1-9

Inhibitory receptor agonists: the future of autoimmune disease therapeutics?

Stephanie Grebinoski [1 2], Dario AA Vignali [1]

Central and peripheral tolerance both contribute to protection against autoimmunity. The pathogenesis of autoimmunity, however, can result from critical deficits or limitations in peripheral and/or central tolerance mechanisms, presenting an opportunity for therapeutic intervention. Recent advances highlight the substantial impact of inhibitory receptors (IRs), which mediate peripheral tolerance, in autoimmunity. Deletion and blockade studies in mice, IR disruption in humans, and correlation with positive disease outcomes all highlight potential clinical benefits of enhancing IR signaling (agonism)—specifically CTLA4, PD1, LAG3, TIM3 and TIGIT—to treat autoimmune disease. Although critical questions remain, IR agonists represent an unappreciated and untapped opportunity for the treatment of autoimmune and inflammatory diseases.



Present Approaches Target the Symptoms of Autoimmune Diseases

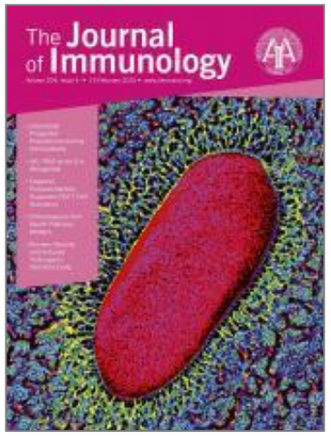
Corticoids, methotrexate, TNF & interleukin inhibitors (anti-TNF-α,-IL-6, -IL-17, -IL-23 mAbs)

Future Approaches Target the Causes of Autoimmune Diseases

Targeting autoimmune effector T cells with immune checkpoint (e.g. PD-1 and LAG-3) agonists

Grebinoski S, Vignali DA. Inhibitory receptor agonists: the future of autoimmune disease therapeutics? Curr Opin Immunol. 2020 Dec;67:1-9. doi: 10.1016/j.coi.2020.06.001. Epub 2020 Jun 30. PMID: 32619929; PMCID: PMC7744338.

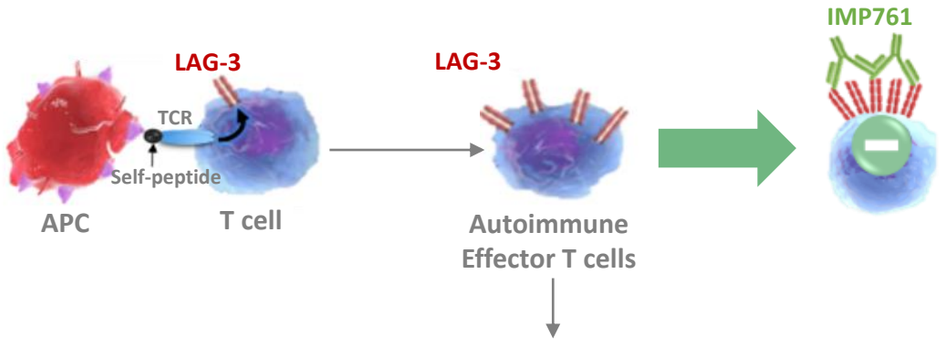
IMP761: First-in-Class LAG-3 Agonist is Potential Game-Changer



IMP761 - A LAG-3-Specific Agonist Antibody for the Treatment of T Cell-Induced Autoimmune Diseases

IMP761 - Juvenile idiopathic arthritis: LAG-3 is a central immune receptor in children with oligoarticular subtypes

IMP761 is the world's first immunosuppressive LAG-3 agonist antibody that is designed to address the underlying cause of many autoimmune diseases. This potential game-changer in the treatment landscape is expected to enter the clinic by mid-2024.



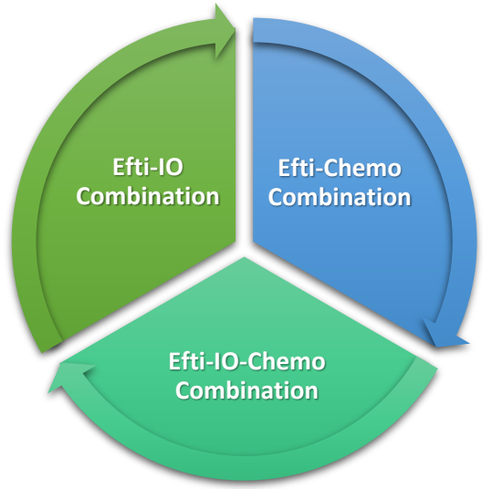
IMP761 increases natural LAG-3-mediated down-regulation of auto-reactive memory T cells (root cause of many diseases)

Epigenetic reprogramming leads to T cell helper (Th) induced Autoimmune Diseases such as Rheumatoid Arthritis (Th1), Allergic Asthma (Th2), IBS (Th17), etc.

Company Highlights

Lead candidate Efti addressing therapeutic gaps across the solid tumor treatment landscape:

- **First-in-class MOA** – Unique MHC Class II agonism via efti activates innate and adaptive anti-tumor immunity
- **Activity across PD-L1 spectrum** – Activity in hot/tepid/cold tumours addressing high unmet needs
- **Consistent Outcomes** – Improved survival across multiple indications with mature data
- **Combination Flexibility** – Well-tolerated profile with standard-of-care IO and/or chemotherapy



Deep LAG-3 Pipeline:

- **Multiple LAG-3 Programs** – Three clinical-stage and two preclinical assets in oncology & autoimmune diseases
- **Upcoming Milestones** – Multiple data updates from clinical programs and IMP761 expected to reach clinic in mid-2024

Strong IP/Balance Sheet:

- **Intellectual Property** – Comprehensive IP portfolio; innovative biologics also potentially entitled to up to 12 years test data exclusivity
- **Well-Financed** – Cash balance of A$110.1 million (as of 30 September 2023); cash runway to early 2026

Board and Management

Dr Russel Howard
Non-Executive Chairman

Dr Howard has over 45 years' experience in Australian & US biotech sectors, including the Walter & Eliza Hall Institute, Schering-Plough, GSK and as Maxygen CEO. He currently is Chairman of NeuClone Pty Ltd and a former Director of Circadian Technologies Ltd.

Pete Meyers
Deputy Chairman

Mr Meyers spent 18 years in health care investment banking before taking on CFO roles in biotechnology including Eagle Pharmaceuticals, Motif BioSciences and TetraLogic Pharmaceuticals. Most recently he was CFO of Slayback Pharma, a KKR portfolio company acquired in Sept 2023.

Lis Boyce
Non-Executive Director

Lis Boyce has over 30 years' experience as a corporate lawyer and is a partner at Piper Alderman. She has a strong focus on Life Sciences and Healthcare, and is deputy chair of AusBiotech's AusMedtech Advisory Group, as well as a member of AusBiotech's State Committee for NSW.

Marc Voigt
Executive Director & CEO

Mr Voigt has over 25 years of experience in the corporate and biotechnology sectors, including Deutsche Life Science, Revotar Biopharmaceuticals AG, Medical Enzymes AG and Allianz. He was appointed as CEO and Executive Director in July 2014. Mr Voigt is based in Berlin.

Prof. Frédéric Triebel, MD, PhD
Executive Director, CSO

Prof Triebel discovered the LAG-3 gene while working at the Gustave Roussy Institute and is a pioneer in the LAG-3 field of immuno-oncology. He was the founder of Immutep S.A., which was acquired by the Company in 2014. Based in Paris, he holds a Ph.D. in immunology (Paris University).

Deanne Miller
COO, General Counsel

Ms Miller has broad commercial experience having held legal, investment banking, regulatory compliance and tax advisory positions at RBC Investor Services, Westpac Group, Macquarie Group, the Australian Securities and Investment Commission, and KPMG.

Florian Vogl, MD, PhD
Chief Medical Officer

Dr Vogl is a board-certified MD and has over 13 years in the biopharmaceutical industry with extensive clinical development expertise in the field of oncology in the Europe and the US through roles at Cellestia Biotech, Rainier Therapeutics, Novartis and Amgen.

Christian Mueller
VP, Strategic Development

Mr Mueller has +10 years of clinical development experience in oncology, including at Medical Enzymes AG focusing on therapeutic enzymes for cancer treatment and at Ganymed Pharmaceuticals AG developing ideal mAbs in immune oncology.

Claudia Jacoby, PhD
Director of Manufacturing

Dr Jacoby has +15 years of biotech industry experience with extensive skills in protein expression and purification as well as in analytical and preclinical development from her various positions at preclinical and clinical-stage pharmaceutical companies.

James Flinn, PhD
IP & Innovation Director

Dr Flinn is an Australian Patent Attorney with +20 years of professional experience in building and managing IP portfolios, including GSK, two US-based pharmaceutical companies, a major Australian retailer, and a Melbourne Patent Attorney firm.

David Fang
Finance Director

Joining Immutep in 2018, Mr Fang has over 12 years of accounting and auditing experience across various industries including biotechnology, manufacturing and healthcare including Group Finance Manager of Kazia Therapeutics Limited and auditor at PWC.

Chrystelle Brignone, PhD
Preclinical Development Director

Dr Brignone joined Immutep in 2004 and has more than 20 years' experience in the field of Immunology and Immune monitoring of clinical studies. As Principal Scientist since 2014, she is leading the R&D in the Immutep laboratory in France.

Recent Milestones & Looking Ahead

Non-Small Cell Lung Cancer
Presented final data from TACTI-002 (Part B) in anti-PD-(L)1 refractory 2L NSCLC

Metastatic Breast Cancer
Treated 1st patient in safety lead-in of AIPAC-003 PII/PIII trial of efti + chemo

Soft Tissue Sarcoma
Treated 1st patient in cost-efficient investigator-initiated EFTISARC-NEO Study

Non-Small Cell Lung Cancer
Presented biomarker data from TACTI-002 at SITC

Head & Neck Squamous Cell Carcinoma
Completed TACTI-003 enrollment

Completed A$80 Million Capital Raise

March 2023

June 2023

September 2023

December 2023

Metastatic Urothelial Carcinoma
Received regulatory approval for initiation of jointly-funded INSIGHT-005 with Merck KGaA, Darmstadt, Germany

Head & Neck Squamous Cell Carcinoma
Presented final data from TACTI-002 (Part C) in 2L HNSCC at ASCO

Non-Small Cell Lung Cancer
Presented compelling Overall Survival data from TACTI-002 & encouraging data from triple combo at ESMO 2023

Metastatic Breast Cancer
Completed safety lead in for AIPAC-003 and initiated randomized Phase II testing 30mg & 90mg efti with chemo

Upcoming Milestones & Catalysts

Non-Small Cell Lung Cancer
TACTI-004 trial design and preparations for study start

Head & Neck Squamous Cell Carcinoma
Data in 1H2024 from TACTI-003

Non-Small Cell Lung Cancer
Updates from triple combo INSIGHT-003 trial

Soft Tissue Sarcoma
Update from investigator-initiated EFTISARC-NEO study

Metastatic Breast Cancer
Update from AIPAC-003 study

Metastatic Urothelial Carcinoma
Update from investigator-initiated INSIGHT-005 study

Autoimmune Diseases
Continue IND-enabling studies of IMP761 and move forward to clinical development in mid-2024

Updates from partnered programs

Potential expansion of clinical trial pipeline

Strong balance sheet with A$110.1MM in cash providing runway to early 2026*

* As reported in Immutep Quarterly Activities report for the quarter ended 30 September 2023.

Appendix

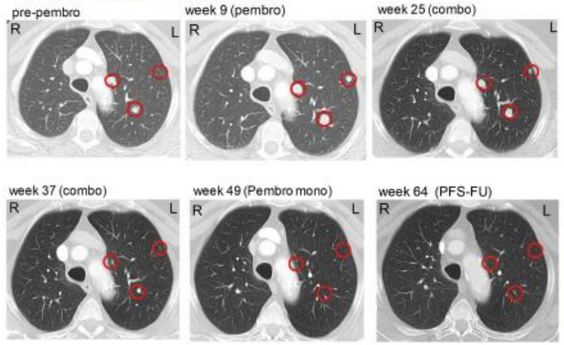
TACTI-mel: First-in-Man Study of Efti plus Anti-PD-1 Therapy

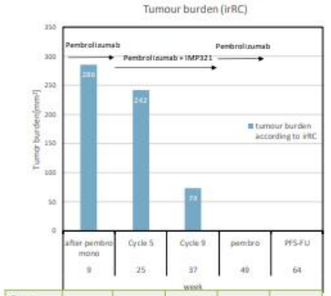
TACTI-mel evaluated efti with KEYTRUDA (pembrolizumab) in unresectable or metastatic melanoma patients with suboptimal responses or progression with KEYTRUDA monotherapy:

- Patients had very late stage of disease: 75% classified as M1c (associated with lowest probability of survival), 67% had lung metastasis, 50% had liver metastasis, 50% had elevated LDH (poor prognosis marker)
- Deep, durable responses observed with tumour shrinkage of 56% and 66% in Part A (efti 1, 6, 30mg; N=18) and Part B (efti 30mg given same day as pembro; N=6)
- Part B had 50% ORR, 66% DCR, and two-thirds of patients were progression free at six months

Patient Case #1 - Pembrolizumab + 1mg Efti (IMP321)

- Male, Caucasian, 84 years
- stage IV visceral disease (lung and thorax metastases), best response pembrolizumab monotherapy irPD
- Patient completed study, PFS-FU (incl. Pembrolizumab monotherapy) was stopped due to patient wish after week 64 → PFS censored week 64
- **Best Response: confirmed irCR**

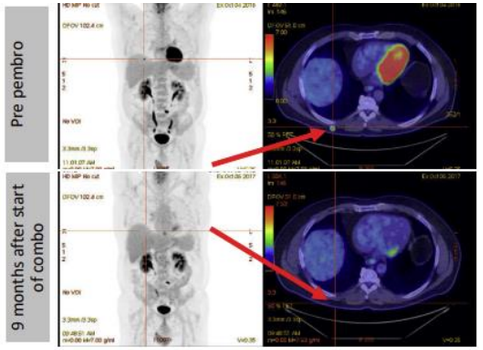




Sum Target Lesions	286 mm²	242 mm²	74 mm²	0 mm²	0 mm²
In %	100%	85%	26%	0%	0%
irRC	N/A	irSD	irPR	irCR	irCR

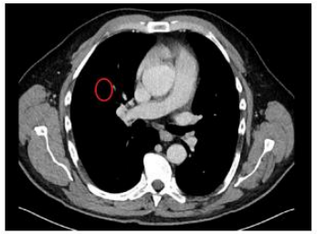
Patient Case #2 - Pembrolizumab + 6mg Efti (IMP321)

- Male, Caucasian, 54 years
- Stage IV skin/superficial disease → best response pembrolizumab monotherapy was irSD
- Target lesion: chest wall; Non-target lesion: Left common iliac LN
- Patient has completed the study treatment, PFS-FU (incl. Pembrolizumab monotherapy) ongoing → PFS 22+ months
- Complete disappearance of target lesions, lymph node normalized
- **Best Response: confirmed irPR**



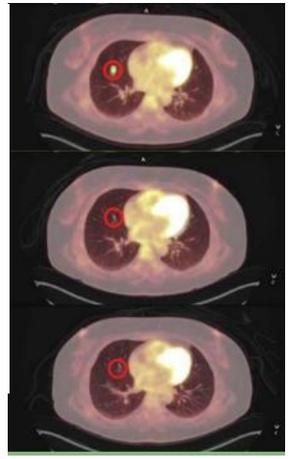
Patient Case #3 - Pembrolizumab + 30mg Efti (IMP321)

- 61-year-old male patient
- TxNxM1b at study entry in March 2018
- irPR reached by week 12 and maintained until end of study



Patient Case #4 - Pembrolizumab + 30mg Efti (IMP321)

- 46-year-old female patient
- TxNxM1c at study entry in August 2018
- Deep irPR reached by week 12 and maintained until end of study
- Residual tumor mass not metabolically active (complete metabolic response, CMR)
- PET-scans negative on two occasions, at the time of and after end of study



PET-Scans

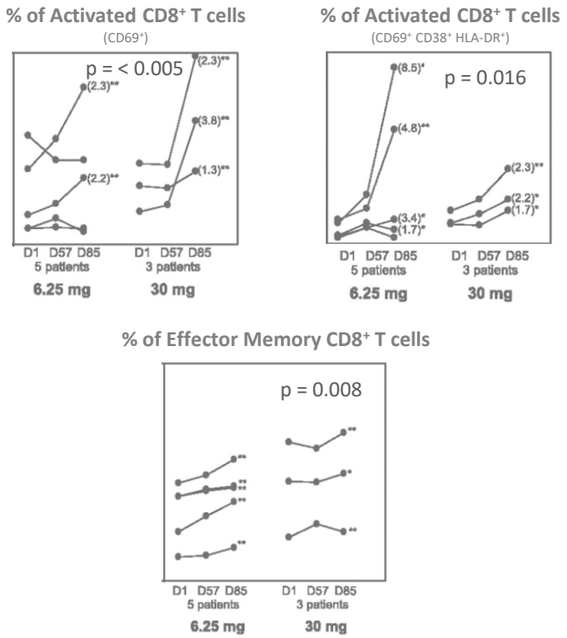
← May 2019

← Aug 2019

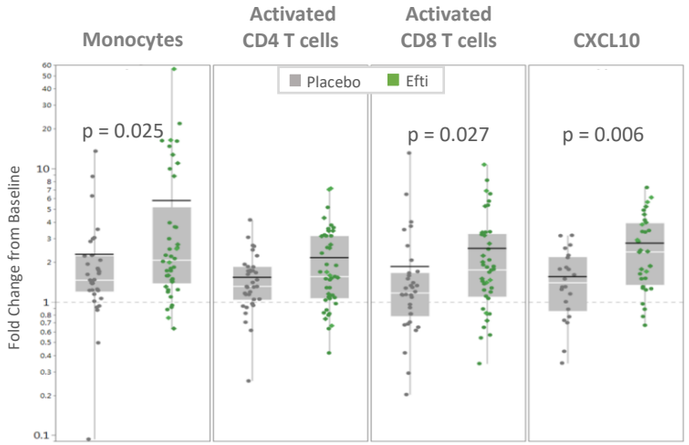
Efti Drives Adaptive & Innate Anti-Cancer Immune Response

Across multiple clinical trials, efti's activation of APCs (dendritic cells) leads to sustained increase of cytotoxic CD8+ T cells, other anti-tumor cells, as well as Interferon-gamma (IFN-γ) & CXCL10 that augment anti-cancer activity

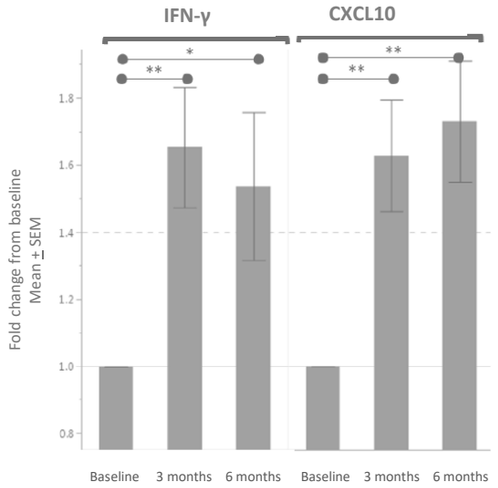
Phase I: Efti monotherapy



Phase II: Efti + paclitaxel



Phase II: Efti + pembrolizumab



*p = <0.05 **p = <0.01
