

ASX: SQX**22 January 2024**

Appointment of Stantons International Audit and Consulting Pty Ltd

SQX Resources Limited (**SQX** or **Company**) advises it has appointed Stantons International Audit and Consulting Pty Ltd (**Stantons**) as the auditor of the Company effective from 19 January 2024.

This appointment follows the conclusion of a tender process for audit services precipitated by the Company's strategic review. The process sought to identify the best value and external auditor option going forward to meet the needs of the Company.

In accordance with this process, the Company has received the resignation of PKF Brisbane Audit as auditor and the Australian Securities & Investment Commission's (**ASIC**) consent to the resignation.

Stantons will hold the office of auditor until SQX's 2024 Annual General Meeting at which shareholder approval will be sought for the reappointment of Stantons.

– ENDS –

About SQX Resources Limited (SQX)

SQX is a modern mineral exploration company dedicated to delivering shareholder value by building a portfolio of exploration, development, and operating assets. Its current focus is on gold and copper mineralisation at the Ollenburgs and Scrub Paddock prospects, located on EPM 27257 in the underexplored Esk Basin in southeast Queensland near major regional infrastructure and population centres. Both prospects feature known mineralisation and historical mine workings.

Scrub Paddock

Identified as a potential gold-copper porphyry, the Scrub Paddock Prospect features more than 20 historical mine workings with surface mineralisation extending across a ~2km strike length. Soil sampling and drilling have already confirmed gold and copper mineralisation; the extent of this mineralisation, both along the strike of the surface anomaly and at depth, is unknown. The Company is aiming to define an economic mineral resource.

Ollenburgs

Ollenburgs hosts potential for a copper-gold porphyry system and features several copper/gold/silver mine workings, an anomaly visible on aeromagnetic mapping, a surface soil and rock-chip geochemical anomaly across ~300x50m and no historical drilling. The Company intends to expand on recently completed soil sampling by undertaking IP surveying and, if justified, follow up with the first-ever drill program at the prospect.
