The DRP has been designed so that participants will always receive the lowest reinvestment price possible, without their reinvestment diluting the pre tax NTA of those shareholders who choose not to participate in the plan. When the Company's share price is greater than or equal to its NTA, dividends are paid as newly issued shares in the Company. If the share price for GVF is above the Company's NTA on the dividend ex-date, participating shareholders will be issued new shares at the greater of a 2.5% discount to the volume weighted average share price over the three trading days from the ex-date, or the NTA value of the Company on this day. If the share price for GVF is less than its NTA on the ex-date, cash available for distribution as dividends on shares subject to the DRP will be used to acquire the Company's shares on-market in accordance with the terms set out in the plan.

Part 5 - Further information
