During the March quarter 2024, Far Northern Resources Ltd (ASX: FNR) successfully raised \$4.165 million and was accepted to admission to the official list of the Australian Stock Exchange (ASX). Shares in FNR started trading on 12 April 2024. The initial Public Offering (IPO) raised \$4,165,000 through the issue of 20,825,000 shares at an issue price of \$0.20. The total undiluted shares on issue at the date of listing was 70,961,135 with FNR having a Market Capitalisation of \$14,192,227 and an Enterprise Value (EV) of \$10,027,227.

FNR has accumulated an exciting package of tenements in the Northern Territory and Queensland that are highly prospective for Gold and Copper. Exploration will commence shortly in the Northern Territory while a rock chip program has been conducted in North Queensland at the Empire project over the southern end of the Empire Mining Lease (see FNR's announcement dated 15 April 2024).

## Exploration Activities

### Empire Copper Gold Project

A rock chip sampling program was conducted over the southern area of the Empire Mining Lease with a view to connect the JORC at the Empire stockwork to the southern area of the block.

- High Grade Copper and Gold rock chips have returned assays of up to 12.64% Cu (FNRRCS24001) and 4.12 g/t gold (FNRRCS24002)
- Other individual surface samples have returned copper grades of 11.59% Cu, 11.89% Cu, 9.60% Cu, 6.53% Cu and 2.61% Cu. (%)
- Other individual samples have returned gold grades of 0.78g/t, 0.92g/t, 1.19g/t, 2.16g/t, 0.75g/t, 1.68g/t and 0.70g/t.

Previous exploration activity at Empire including drilling and soil geochemistry prove a very strong geochemical signature in the associate elements of Au-Ag-Bi-Cu-Mo-Sb-W typical of copper-gold porphyry systems. So far drilling has focussed only on the stockworks where an open pit mineable resource has been defined.

Our latest rock chips show these stockworks extend for at least another 750m and our geologist believes these could be the part of a bigger porphyry style target.

Figure 1 Empire Mining Lease - Location of Empire Stock Work, Pinnacle & United Empire.

## United Empire – Copper-Gold Anomaly

Our recent reconnaissance works focussed on the known area south of Empire Stockworks which exhibits enhanced geochemical signatures which had been previously disturbed by (likely hand-worked) diggings. The small mullock dumps exhibit strong signs of mineralisation and additional rock chips from these show excellent results as reported in this release.

A geophysical program by 3-D Induced Polarisation (3D-IP) is planned for execution as soon as a team is available which is expected to enhance drill targeting. This will be further endorsed with detailed layers of mapping, soil geochemistry and other geological layers.
