

ASX Release

27 August 2024

Registration of Indigenous Land Use Agreement

Renascor Resources Limited (ASX: RNU) (**Renascor**) is pleased to announce that Australia's National Native Title Tribunal has now registered Renascor's Indigenous Land Use Agreement (**ILUA**) with the Barngarla Determination Aboriginal Corporation RNTBC (**BDAC**).

BDAC is the registered Native Title Body Corporate of the Barngarla People, the Traditional Owners of land in the area encompassing the upstream portion of Renascor's proposed vertically integrated Battery Anode Material (**BAM**) operation.

As announced on 19 April 2024¹, the ILUA is an agreement between BDAC and Renascor that contains a cooperative framework to respect Aboriginal heritage and support the BDAC community during the construction and operation of the upstream portion of the BAM project.

In addition to including monitoring and reporting protocols and pathways for employment, training and contracting of members of the Barngarla People, the ILUA provides that Renascor will issue shares to BDAC to the value of \$35,000, calculated at the 30-day VWAP as of the date of the ILUA's registration².

Registration of the ILUA under Part 8A of the *Native Title Act 1993 (Cth)*, which is required under the Native Title Act for the ILUA to be enforceable, has occurred. Accordingly, pursuant to the terms of the ILUA, Renascor is concurrently issuing Renascor shares to BDAC as disclosed in the Appendix 2A which will follow this announcement.

Appendix 1

About Renascor

Renascor is developing a vertically integrated Battery Anode Material Manufacturing Operation (“the Project”) in South Australia. The Project comprises:

- **the Siviour Graphite Deposit** - the world’s second largest Proven Reserve of Graphite and the largest Graphite Reserve outside of Africa³;
- **the Graphite Mine and Concentrator** - a conventional open-pit mine and crush, grind, float processing circuit delivering world-class operating costs in large part due to the favourable geology and geometry of Renascor’s Siviour Graphite Deposit; and
- **a Battery Anode Material Production Facility** - where Graphite concentrate will be converted to PSG using an eco-friendly processing method before being exported to lithium-ion battery anode manufacturers.

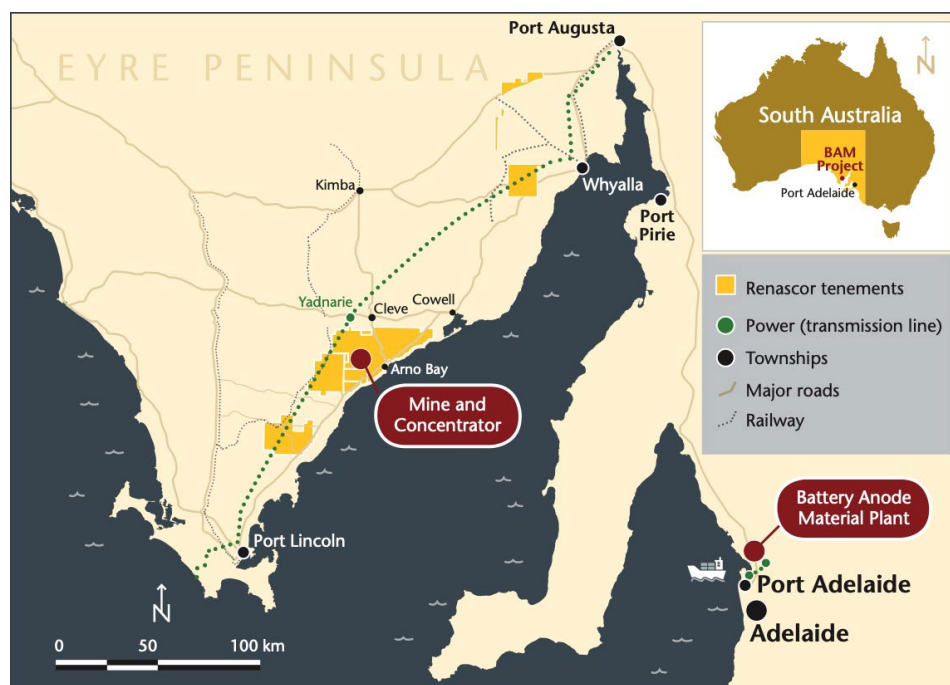

Figure 1. Renascor’s Battery Anode Material Project location

The 100% Renascor owned Siviour Graphite deposit is unique in both its near-surface, flat-lying orientation and its scale as one of the world’s largest graphite Reserves. The favourable geology and size of the deposit will allow Renascor to produce Graphite Concentrate at a low-cost over a 40-year mine life.

Figure 2. Globally Reported Proven Ore Reserve estimates (September 2023)⁴

Renascor intends to leverage this inherent advantage and develop a vertically integrated operation to manufacture high value PSG from a low-cost graphite concentrate feedstock and provide a secure cost-competitive supply of battery anode raw material into the rapidly growing lithium-ion battery market.
