

# SUSTAINABLE CREDIT ACTIVE ETF

Janus Henderson  
INVESTORS

## As at November 2024

### Fund objective

The Fund seeks to achieve a total return before fees that exceeds the total return of the Benchmark by 0.75% p.a. over rolling three year periods.

### Sustainability objective

The Fund seeks to invest in credit securities which the Manager expects currently or will in the future contribute positively towards eight 'People' and/or 'Planet' themes.

### Investment approach

The Manager utilises a proprietary 'Holistic' framework combining qualitative ESG assessments with third-party ESG measures and metrics to assess issuers; a process then complemented by active stewardship and engagement activities.

### Benchmark

## Fund Performance

The Janus Henderson Sustainable Credit Active ETF (Fund) returned 0.79% (net) and 0.83% (gross). The Fund outperformed the Bloomberg AusBond Composite 0-5Yr Index (Benchmark) in November, which returned 0.62% over the month.

Healthy income from credit is delivering strong returns for investors, alongside actively extending duration as yields crested intramonth. Outperformance for the month was solid, with income and credit allocations providing positive contributions, while active rates positioning also contributed an additional 0.1% in November. As bond yields rose, we increased duration by 0.25 years to 3.2 years to lock in market pricing of elevated cash rates for longer. Subsequently there has been a 50bp rally in yields at the time of writing, and we have reduced duration back down to 3.0 years.

The Fund rotated into three new primary market transactions, a AAA rated Covered bond from ING Bank Australia, new issuance from A rated Retail REIT Scentre Group, as well as a new Green bond from global utility provider Iberdrola who is a leader in renewables. The outlook for income generation remains solid and the attractive value on offer in Australian IG spreads has caught investor attention providing support for local spreads, while US spreads are trading fully valued. Healthy risk adjusted income levels are in the Portfolio as we maintain a relatively conservative credit risk position. We continue to meaningfully favour Australian IG allocations, paired with CDS credit hedging which can provide robust returns through a range of market scenarios. Rounding out the year with some positive news, the Fund was also recently upgraded to Recommended by Lonsec.

The Sustainable Credit Fund has a dual mandate; a sustainability objective and a performance objective. Each company within the portfolio has gone through our credit approval process, which includes negative screens, credit analysis and a sustainability assessment using our proprietary holistic ESG framework. In conjunction with normal portfolio construction practices, securities are chosen for their alignment with sustainable themes as well as their return potential for investors. These themes include 'Planet' (decarbonisation, circular economy, sustainable buildings, biodiversity) and 'People' (equality and alleviating poverty, inclusion and social diversity, aid disability support, affordable housing).

The Fund invests in a diversified and sustainable allocation of securities with at least 80% exposure to securities deemed 'Sustainable' and/or 'Impact' in our assessment, and has around 75% allocated to investment grade credit.

## Market Review

Globally central banks, responded to changing economic conditions by lowering interest rates. Bond markets settled, returning to focus on the economic cycle after a period where markets followed a buy-the-rumour, sell-the-fact pattern, surrounding the US elections and incoming President Trump's proposed policies.

Consumer confidence is stabilising, influenced by labour market strength and housing prices and business confidence and investment saw slight improvements. Post-election optimism boosted risk markets, tempered globally through tariff concerns and European sovereign risk. The Australian iTraxx Index ended flat at 66bps, while the Australian fixed and floating credit indices returned +0.86% and +0.37% respectively.

Most sectors exhibited positive spread performance, and fixed rate credit returns were lifted as bond yields rallied. Loans delivered strong credit returns outperforming other subsectors. Interestingly the higher ranking Tier 2 market outperformed hybrids in consecutive months, indicating better risk reward higher in the capital stack.

**The Australian economy is sluggish, and while no recession is forecast, the pressure of higher interest rates is broadening out across sectors of the economy.**

## Market Outlook

The Australian economy is sluggish, and while no recession is forecast, the pressure of higher interest rates is broadening out across sectors of the economy. Core inflation is moderating slowly from high levels. The RBA needs to balance these risks along their so-called narrow path. The extended period of policy at restrictive levels will slow growth further, rebalance the labour market and subdue inflation. The global economic backdrop remains soft, although there are a myriad of risks which generate volatility.

Our base case is for the RBA to remain on hold at current rates before commencing an easing cycle in Q1 2025. We price a more modest than the historically average easing cycle, of around 110bps, spread across 2025. We presently have no tilt to the high or low case. The low case is for an earlier start, and more easing over the whole cycle. The high case looks for just 85bps of easing. The market has built in an RBA easing cycle, with 70bps priced over 18 months. We believe there is value in targeted parts of the curve which outperform into easing cycles. We continue to hold a long duration position and look to adjust the position through market volatility.

In recognition of the highly complex investment environment, our credit strategy remains skewed towards high-quality, investment grade issuers with resilient business models, solid earnings power and conservative balance sheets. Conversely, we are avoiding lower credit quality and leveraged corporate and consumer sectors where default stress is increasing. While we acknowledge that credit spreads in general are tight, all-in yields particularly in low/no default-risk Australian Investment Grade credit remain attractive. We continue to actively and selectively take advantage of these yields in highly-rated corporate bonds and structured credit in both primary and secondary markets, where risk adjusted returns make sense.

Primary credit markets remain active, and we seek to use them to diversify allocations at attractive yields, whilst taking some profit on areas of credit that have released most of their relative value. BBB rated cyclicals and consumer discretionary subsectors seem to offer little spread advantage over more defensive corporates. In bank capital, hybrids look poor value versus Tier 2, and we favour deallocating from the riskier hybrids at this stage.

Despite a relatively buoyant market attitude, compensation for risk remains low in sub investment grade and illiquid credit as central banks consider leave rates higher for longer. Strong funding markets have allowed extensions and refinancing lowering overall default risks. Our preference is to earn reasonable income and capital gains up in quality, leaving capacity and liquidity to take advantage of more attractive entry points for global high yield, hybrids and emerging market debt. Relative value in Loan spreads appears more attractive and we have moved to a more neutral position in that sector. We continue to hold credit protection (via global index CDS) which remains cheap, as risk markets are no longer well priced for negative surprises.

Janus Henderson's publicly available Australian Fixed Interest Funds have now been serving clients for 30 years. We thank our clients for their enduring support. We are privileged to have been a trusted steward of our clients' assets for the last three decades and we are excited about the prospect of continuing to offer valuable investment solutions for investors.

**In November Iberdrola, one of the world's largest renewables producers, came to market with a benchmark size AUD deal.**

## ESG Commentary

In November Iberdrola, one of the world's largest renewables producers, came to market with a benchmark size AUD deal. It is a green bond backed by the issuers green bond framework. Eligible Green Projects are deemed to provide "environmental benefits that contribute to: (i) avoid CO2 emissions, (ii) connect renewable energy production units to the general network, (iii) improve networks in terms of demand-size management, energy efficiency and access to electricity or (iv) ensure the stability and back up of generation systems with significant renewable energy penetration.
