Orbminco Limited (ASX: OB1) (“Orbminco”, “the Company”) is pleased to present its Activities Report for the three-month period ending 31 December 2024.

¹ CuEq % = Cu % + (0.95 x Au g/t) + (0.00049 x Mo ppm)

Where: Cu – copper grade (%), Au – gold grade (g/t), Mo – molybdenum grade (g/t)

0.95– conversion factor gold to copper and 0.00049 – conversion factor molybdenum to copper with the copper equivalent formula based on the following parameters (prices in USD)

- Copper price – 4.06 US\$/lb
- Gold price – US\$ 2634.4/oz Au
- Molybdenum price –US\$ 20/lb Mo

Preliminary metallurgical recovery analysis at Xanadu Mines Ltd’s geologically similar Kharmagtai deposit has indicated recoveries of 90% Cu and 78% Au, for Mo a recovery of 60% is assumed considering a similar porphyry setting as the Caraval porphyry, a lower grade copper–gold – molybdenum porphyry. The Company considers the Kharmagtai deposit to be geologically similar being a porphyry copper gold deposit located in the same geological setting less than 100km away. The assumed metal price for this analysis is [insert]. On this basis, in the company’s opinion all the elements included in the metal equivalents calculation have a reasonable potential to be recovered and sold; however, the Company notes that further metallurgical test work is intended to be carried out to verify the recovery rates and there is a risk that such further test work may result in variances to the current metallurgical recovery rate.

² True widths are unknown; however, drilling was planned to intercept the expected mineralised structure perpendicular when possible, to maximise the potential for downhole widths being representative of true widths.

Bronze Fox Project, Mongolia (WML earning in)

During the quarter, Orbminco continued exploration at the Bronze Fox Project, located within the Mongolian Southern Gobi copper-gold belt, which included a 16-hole 2516m shallow infill and extension diamond drilling programme. Further assessment of additional priority targets on the tenure was also completed, including mapping and sampling.

Orbminco has, by progressing the drilling, commenced earning an 80% interest in the Project (in two phases) by spending US\$4 million (with an election to acquire 100%).

The drilling programme at Bronze Fox (Figure 1) was aimed at:

- confirming the potential of a higher-grade structural zone, in proximity of historic hole F62, which returned 929m @ 0.37% CuEq¹. This targeted zone is interpreted to be the confluence of an IP anomaly and a structural fault zone. Drilling succeeded in extending the mineralisation ~100M west in hole F109 (see highlights) and is likely to support an increase in the volume and grade of the resource; and
- increasing resource tonnage by infill and extension drilling, and at the same time provide data to facilitate the conversion of the existing EL to an ML. Drilling intersected mineralisation in the majority of holes (Tables 1 and 2) with a standout intersection of 26m at 0.91% CuEq (including 2m at 8.29% CuEq) from 24m in hole F111.

The Company plans to complete further exploration in the up-coming field season (May to Oct) which will include geophysical surveys and drilling once targets are refined.
