**ASX Announcement/Press Release | 7 March 2025****Gold Mountain Limited (ASX:GMN)****Resolutions 9 and 10 at recent AGM**

Gold Mountain Limited (ASX:GMN) ("Gold Mountain" or the "Company") advises ASX has determined that resolutions 9 and 10 approved by the Company's shareholders at its Annual General Meeting held on 28 November 2024 were not in accordance with the Listing Rules and therefore invalid.

Resolution 9 was not valid as the notice of meeting did not contain the information required by ASX Guidance Note 13 (primarily because the Company did not have that information).

Resolution 10 was not valid as the ratification sought (and obtained) was for securities that were issued pursuant to Listing Rule 7.2 Exception 13.

The Company continues to consider options for its PNG assets.

**About Us**

Gold Mountain (ASX:GMN) is a mineral explorer with projects based in Brazil and Papua New Guinea (PNG). These assets, which are highly prospective for a range of metals including rare earth elements, niobium, lithium, nickel, copper and gold, are now actively being explored.

Gold Mountain has gradually diversified its project portfolio. The Company has highly prospective rare earth elements (REE), niobium, copper and lithium licenses located within the eastern Brazilian lithium belt, spread over parts of the Borborema Province and São Francisco craton in north-eastern Brazil including in Salinas, Mines Gerais.

In PNG, Gold Mountain is exploring the Wabag Project, which covers approximately 950km<sup>2</sup> of highly prospective exploration ground in the Papuan Mobile belt. This project contains three targets, Mt Wipi, Monoyal and Sak Creek, all lying within a northwest-southeast striking structural corridor. The three prospects have significant potential to host a porphyry copper-gold-molybdenum system and, or a copper-gold skarn system. Gold Mountain's current focus is Mongae Creek, which has been subjected to several phases of exploration, and the potential

to host a significant copper-gold deposit is high. The current secondary targets are, in order of priority, Mt Wipi, Lombokai and Sak Creek. A new target, potentially another epithermal/porphyry system has been identified and is about to be sampled.

Gold Mountain has also applied for a total of 1,048 km<sup>2</sup> in two exploration licences at Green River where high grade Cu-Au and Pb-Zn float has been found and porphyry style mineralisation was identified by previous explorers. Intrusive float, considered to be equivalent to the hosts of the majority of Cu and Au deposits in mainland PNG, was also previously identified.
