Oneview Healthcare (ONE:ASX) achieves ISO 42001 certification, setting new standards for trust and innovation

Melbourne, Australia - 12 May 2025 - Oneview Healthcare Plc ("Oneview"), a leading innovator in health technology, today announced that it has achieved ISO 42001 certification, becoming one of the first companies on the ASX and in the connected care sector to attain this certification for its Artificial Intelligence Management System. This achievement underlines Oneview's commitment to the responsible development and deployment of AI, promoting the highest levels of ethical practice, transparency and accountability. This certification follows Oneview's achievement of ISO 27001 (in respect of its information security management systems) in March 2021 and ISO 27701 (in respect of its privacy information management systems) in August 2021.

Demonstrating compliance with security and data privacy standards has been an integral part of Oneview's sales process for many years now. More recently, AI governance has become a regular component of the pre-sales assessment process with a number of Oneview's prospective customers. ISO 42001 certification provides robust evidence of stringent AI governance, giving prospective customers assurance that Oneview products meet their compliance requirements. Crucially, Oneview's achievement of ISO 42001 certification will allow it to expedite formal product development of "Ovie", the company's virtual patient assistant that was launched at the HIMSS Global Health Conference and Exhibition in March 2025, for full commercial release.

As the healthcare industry continues to explore innovation through AI technology, ISO 42001 certification provides a crucial framework for organisations to manage the unique challenges and risks associated with AI technologies. By adhering to this rigorous international standard, Oneview demonstrates its dedication to:

- **Ethical and Responsible AI:** Ensuring AI systems are developed and used in a manner that prioritises patient safety, privacy and well-being.

- **Transparency and Explainability:** Fostering trust by making AI decision-making processes clear and understandable.

- **Risk Management:** Proactively identifying and mitigating potential risks associated with AI, safeguarding both patients and healthcare providers.

- **Compliance and Governance:** Adhering to relevant regulations and establishing robust governance structures for AI systems.

"We are incredibly proud to be among the first in the health technology sector to achieve ISO 42001 certification," said James Fitter, CEO of Oneview. "This is a testament to our unwavering commitment to responsible innovation. AI holds immense potential to revolutionise healthcare, but it is imperative that we proceed with caution and prioritise ethical considerations. This certification validates our approach and provides our customers, partners and shareholders with the assurance that our AI solutions are built on a foundation of trust and integrity."

"Congratulations to Oneview Healthcare for earning their ISO/IEC 42001 certification, which is a widely recognized signal of trust and security," said Steve Simmons, COO of A-LIGN. "It's great to work with organizations like Oneview who understand the value of expertise in driving an efficient audit and the importance of a high-quality final report."

Oneview's achievement of ISO 42001 certification marks a significant milestone in the company's journey to transform healthcare through responsible AI innovation. By setting a new standard for ethical AI practices, Oneview is paving the way for a future where AI empowers healthcare professionals and improves the lives of patients around the world.

This release was approved by the Board of Oneview Healthcare plc.

About Oneview Healthcare

Serving hospitals and healthcare systems, academic medical centers, and pediatric hospitals worldwide, Oneview Healthcare's Care Experience Platform provides a unified set of digital tools in a single bedside solution. Oneview's CXP connects patients, families and care teams with services, education, and information during hospital stays. Fully automated, integrated, and personalized, hospitals using Oneview positively impact safe and timely discharges while streamlining nursing workflows.
