ANTAM Supports Mangrove Ecosystem Protection and Management in West Kalimantan

Mempawah, August 8, 2025 – In commemoration of World Mangrove Day, the 79th Anniversary of Bhayangkara, and the 80th Anniversary of the Republic of Indonesia, PT Aneka Tambang Tbk (ANTM) or ANTAM participated in a mangrove planting event held alongside the Minister of Environment, Dr. Hanif Faisol Nurofiq, and the Chief of the Indonesian National Police, Police General Drs. Listyo Sigit Prabowo, M.Si., at the Mempawah Mangrove Conservation (MMC), West Kalimantan. This activity is part of efforts to restore mangrove ecosystems and strengthen the protection of Indonesia's coastal areas.

ANTAM's President Director, Achmad Ardianto, emphasized that the ANTAM's involvement in this event aligns with its commitment to environmental preservation, particularly in coastal regions.

"As a mineral resource management company, including in the Mempawah area, ANTAM recognizes the vital role of mangrove ecosystems in protecting coastal areas from erosion and supporting environmental sustainability. Therefore, we fully support the initiative led by the Minister of Environment and the Chief of the Indonesian National Police through this mangrove planting at MMC, with the hope of delivering positive impacts for both the ecosystem and surrounding communities," said Ardianto.

As part of its sustainability practices based on Environmental, Social, and Governance (ESG) principles, ANTAM consistently conducts mangrove planting activities in areas surrounding its operational sites. As of June 2025, ANTAM has planted over 1.16 million mangrove seedlings across 100 hectares.

"Several of ANTAM's operational areas are located in coastal zones, making mangrove ecosystem maintenance a critical responsibility for us. This initiative is not only aimed at preserving environmental quality and biodiversity, but also expected to bring social and economic benefits to local communities," Ardianto added.

ANTAM has also implemented various concrete measures to conserve mangrove ecosystems in its operational areas through rehabilitation and planting programs in the coastal zones of Southeast Sulawesi, North Maluku, and Southwest Papua. The Company collaborates with coastal communities and forest farmer groups to provide training in mangrove restoration, as well as conducts environmental education for the local community and students. These initiatives form part of ANTAM's long-term sustainability strategy in its operational regions.
