

Sapphire 6 Pilot wells return to production

Blue Energy Limited (ASX: "BLU") is pleased to advise that as foreshadowed in the last quarterly report (31st July 2025) the Sapphire 6 Pilot (see Figure1) has been re-instated to production after surface equipment maintenance and replacement.

As the Sapphire 6V well has been offline, a dewatering process has commenced with a measured reduction of hydrostatic pressure (water level) on the producing coal seams so as to protect the reservoir.
