Fund objective

The Fund seeks to achieve a total return before fees that exceeds the total return of the Benchmark by 0.75% p.a. over rolling three year periods.

Sustainability objective

The Fund seeks to invest in credit securities which the Manager expects currently or will in the future contribute positively towards eight 'People' and/or 'Planet' themes.

Investment approach

The Manager utilises a proprietary 'Holistic' framework combining qualitative ESG assessments with third-party ESG measures and metrics to assess issuers; a process then complemented by active stewardship and engagement activities.

Fund Performance

The Janus Henderson Sustainable Credit Active ETF (Fund) returned 0.62% (net) and 0.67% (gross), outperforming the Bloomberg AusBond Composite 0-5Yr Index (Benchmark) in July, which returned 0.30% on the month. The Fund continues its outperformance, beating the Benchmark over the longer term including by 2.08% (net) over the year, and 1.98% (net) since inception per annum.

The Fund delivered healthy returns and outperformance for August as strong income generation was complimented by capital gains from credit spread compression. Excess returns versus the Benchmark were generated via income advantage complimented by positive selection across credit, in particular office REITs, Universities, and Electric utilities. Interest rate duration was retained neutral versus the Benchmark as market pricing for RBA easing remains fairly priced.

Primary supply accelerated and was well absorbed by significantly oversubscribed books. We used the increase in supply to continue to transition and diversify the Portfolio's credit selection. We selectively participated in bank senior from Svenska Handelsbanken, and CBA and OCBC Green three-year senior notes, as well as five-year notes from New York Life.

The Sustainable Credit Fund has a dual mandate; a sustainability objective and a performance objective. Each company within the portfolio has gone through our credit approval process, which includes negative screens, credit analysis and a sustainability assessment using our proprietary holistic ESG framework. In conjunction with normal portfolio construction practices, securities are chosen for their alignment with sustainable themes as well as their return potential for investors. These themes include 'Planet' (decarbonisation, circular economy, sustainable buildings, biodiversity) and 'People' (equality and alleviating poverty, inclusion and social diversity, aid disability support, affordable housing).

The Fund invests in a diversified and sustainable allocation of securities with at least 80% exposure to securities deemed 'Sustainable' and/or 'Impact' in our assessment, and has between 75-85% allocated to investment grade credit.

Market Review

Despite significant global events, market reactions remained subdued, reflecting careful scrutiny of changes within the US Federal Reserve and labour statistics leadership. Globally, economic challenges persist, with US tariff-related inflation and weakening labour markets, while Australia navigates successfully, maintaining stable economic indicators and cautious policy measures.

Strong corporate earnings supported a global risk rally, in some cases breaking all-time highs. The Australian iTraxx Index ended 1bp tighter at 67bps, while Australian fixed and floating credit indices returned +0.60% and +0.46% respectively with stronger spread tightening in physical credit. We saw some of the largest investor appetites in Australian credit market history during August. CBA priced new senior notes, for which they received over \$13 billion of demand, the largest ever AUD primary book. They issued \$5 billion, one of the largest primary deals in AUD credit history.

This was followed shortly by two inaugural AUD BBB Rated deals from Republic of Indonesia and Electricite de France (EDF). Both saw heavy demand attracting \$8 billion of interest respectively. Noteworthy was investor demand for longer 10- and 20-year maturities. In the past six weeks we have seen two AUD 20 years issued, which historically had been negligible.

Market Outlook

There has been little change in market pricing over the month, with a low in the cash rate priced at 3.02% in July 2026.

Our base case for the RBA to ease a further 75bps to 2.85%. Our low case reflects a weaker economic outcome and the RBA easing by a total of 250bps. We allocate a modest weight to the low case. We hold a small, long duration position to take advantage of some of the lift in yields, while we remain vigilant through the volatility to take advantage of two-way mispricing.

Our decision to hold significant levels of credit protection coming into 2025 allowed us to be especially nimble during market dislocations earlier in the year. In recognition of the complex and uncertain investment environment, our credit strategy remains skewed towards high-quality, investment grade issuers operating in defensive sectors, with resilient business models, solid earnings power and conservative balance sheets. Conversely, we are avoiding economically-sensitive, lower credit quality and leveraged corporate and consumer sectors where default stress remains elevated. Credit spreads and all-in yields particularly in low/no default-risk Australian Investment Grade credit remain reasonably attractive versus global credit. We maintain our constructive view that high quality Australian credit will remain resilient through a range of macro-economic environments, and are well-invested across client portfolios. Notwithstanding, given its reasonable pricing, we have prudently elected to rebuild material levels of credit protection to protect against downside tail risks while also maintaining ample capacity to take advantage of likely periods of elevated volatility in the future.

ESG Commentary

While not a green bond, it was of interest to see EDF, a European nuclear generator, come to the Australian market and set records for an AUD primary bookbuild. They issued \$1 billion in bonds across two maturities, with outsized demand. While nuclear was hotly contested during our recent election campaign, it appears that these concerns don't extend to many Australian investment portfolios given the nuclear reactors are in Europe. It should be noted that nuclear energy does form part of the European taxonomy for sustainable investments.

Sustainable Credit Fund

As at June Quarter 2025

Labelled bonds# structure breakdown

	Fund
Sustainability-linked	7%
Sustainability	8%
Social	8%
Green	41%

Labelled bonds include use of proceeds bonds such as green, social and sustainability bonds which fund projects with specific and dedicated environmental and/or social benefits and sustainability-linked bonds that do not finance particular projects but rather have their coupons linked to the issuers reaching predetermined sustainability performance targets and key performance indicators. Percentages may not add up to 100% as the breakdown only considers labelled bond investments in the fund.
