**ASX ANNOUNCEMENT**  
**11 November 2016**

**RIGHTS ISSUE TO FUND DRILL TESTING OF BASE METAL PROJECTS**

The Company has resolved to conduct a non-renounceable entitlements issue of shares on a 1 for 8 basis at 8.5 cents per share, to raise up to approximately \$1,856,951. The offer will be underwritten by Veritas Securities.

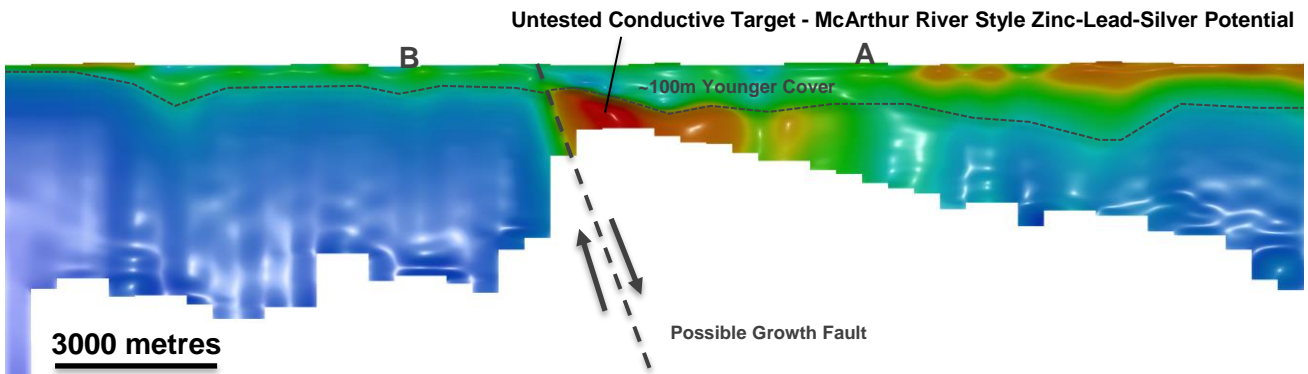

Funds raised through the entitlements issue will primarily be used to drill test a number of exciting base metal targets within Red Metal's portfolio and continue to advance the Company's funding strategy for Maronan.

The new funds will initially be put to work drill testing:

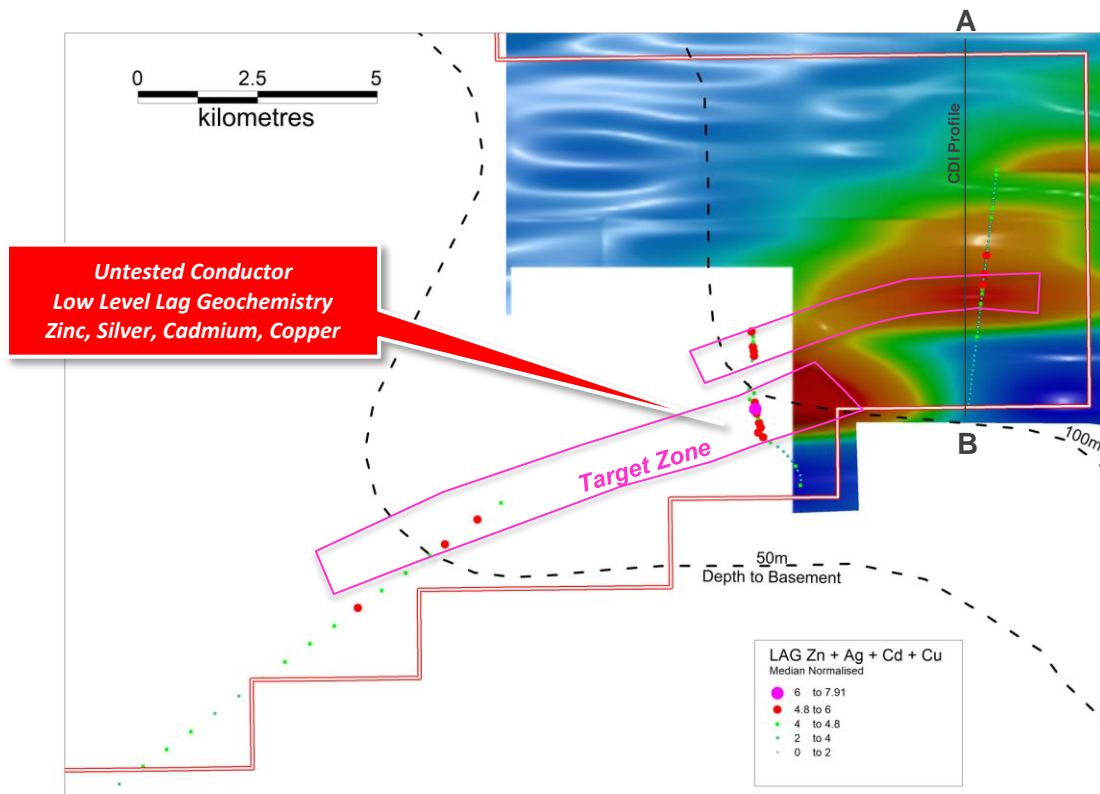

- Large stratabound electrical conductors recently identified on the Company's Lawn Hill project for McArthur River style zinc-lead-silver mineralisation (Figures 1 and 2); and
- "Bulls eye" magnetic targets with supporting copper-bismuth soil geochemistry prospective for high-grade, Tennant Creek styles of copper and gold mineralisation (Figure 3).

Low cost, proof-of-concept geophysical surveys and follow-up drill tests on new projects like the Nullarbor base metal project and Bactrian graphite prospect are also planned with this funding (refer to Red Metal's most recent quarterly report and ASX announcement for details).

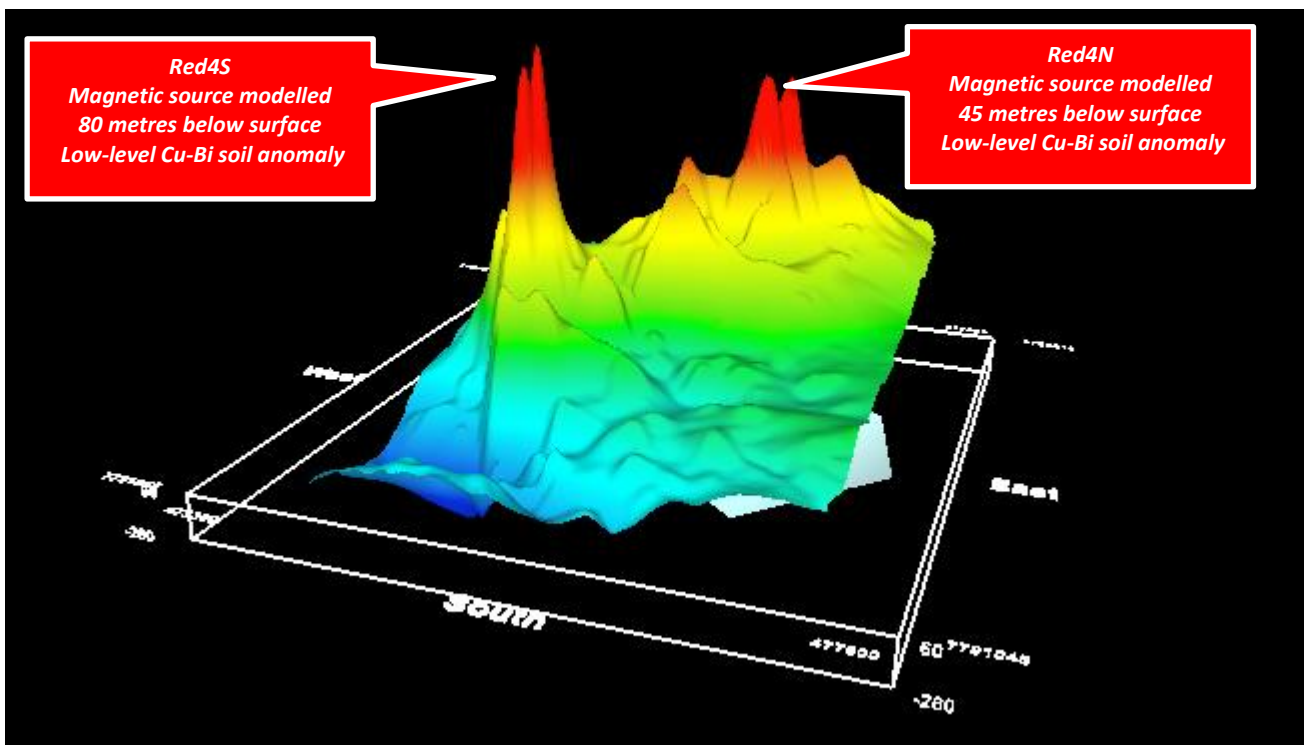

In addition, the funding will allow Red Metal to continue to generate and cost effectively test a range of new and exciting base metal opportunities in Australia.

[Figure 1] Lawn Hill Project: Example of a previously untested conductivity target displayed on a conductivity depth image (CDI profile). Sectional view showing the vertical scale at four times the horizontal scale.

[Figure 2] Lawn Hill Project: Image of historic ground EM overlain by a thematic presentation of median normalised zinc + silver + cadmium + copper values (bottom) from recent lateritic lag sampling. The laterite is developed on Mesozoic limestone cover which overlies the conductive basement rocks that are prospective for McArthur River style zinc mineralisation. Interpreted depth to basement shown as dashed contour lines.

[Figure 3] Tennant Creek Projects: Three dimensional view of high resolution magnetic image over the Red 4N and Red4S targets highlighting strong bulls-eye magnetic anomalies (red peaks). Encouraging low level copper and bismuth anomalism is measured in clay fraction soils collected above the blind magnetic targets.
