

Xped Limited

Intel Smart Home Platforms to integrate Xped ADRC technology

Highlights

- MOU with US listed Company identified as Intel
- Xped brings ADRC technology to Intel Smart Home Platforms
- Integration of ADRC components into Intel's Smart Home Development Acceleration Platform
- Xped progressing opportunities with Intel's customer base

Xped Limited (**ASX: XPE**) ("**Xped**" or "**the Company**") has successfully ported its patented Auto Discovery Remote Control ("ADRC") on Intel's Smart Home Gateway.

Following a Memorandum of Understanding ("MOU") entered with Intel in April, Xped is bringing ADRC technology to the Intel Smart Home Platforms. ADRC provides Intel's ODMs, OEMs and ISVs the option to use Xped's "Tap" for device discovery, provisioning, and pairing, as well as, Xped's RML and Xped App technology for improved time-to-market solutions within the Internet of Things space. The Xped ADRC technology improves the user experience between the Gateway, Smart Phone, and "Things" by providing technology for creating elegant and seamless applications.

The integration of ADRC components into Intel's Smart Home Development Acceleration Platform results in a more complete Smart Gateway solution, taking advantage of Intel's efforts with OCF's Iotivity solution, rules engine, and security components.

Xped Limited

"We have worked with Xped on a mutually beneficial business model by making ADRC available to our ecosystem of partners. By providing a key building block for customers to improve ease of adoption, we expect to solve a key usability issue," said Matthew Michael, GM of Smart Homes at Intel IOTG.

Xped's Managing Director Martin Despain commented "Following the successful porting of ADRC onto the Intel IoT Gateway Solution, the Company is moving forward and engaging with Intel's customer base for licensing opportunities".

The Company has enjoyed the working relationship and support provided by Intel and is closely working with Intel's business development team to identify licensing opportunities that can bring revenue to Xped.

As these new opportunities progress with the support of Intel and their customer base, the Company will provide further information to market on any agreed terms and arrangements being entered.

Martin Despain
