Wins Road Lighting Upgrade for Manningham City Council

8 February 2017, Melbourne: Traffic Technologies Limited (TTI or the Company) is pleased to announce that it has been awarded an initial order for the supply of 4,750 "P" category LED street lights by Manningham City Council in Victoria.

The supply of the street lights will commence in the coming weeks and is scheduled to be completed by May 2017. This order follows the Company's recent success in securing lucrative supply contracts across New South Wales, Victoria, South Australia and Queensland for the supply of "V" category LED road lights.

Manningham is located in Melbourne's north-eastern suburbs with borders extending from 10 km from the Melbourne CBD, out to 32 km from the CBD at its eastern extremity. Manningham's transport network includes 850 km of roads within its boundaries.

The LED street lights to be supplied by the Company form part of the council's 2016/17 budgeted allocation of \$1.92m for a bulk change-over replacing traditional mercury vapour street lights with energy efficient street lights. The council at its discretion also has an option to purchase an additional 1,500 units if required.

Commenting on this contract, Managing Director, Con Liosatos said: "With approximately 15% of the street light market converted to LED to date this is the first major upgrade to be awarded to the Company in the "P" category street lighting sector. The award of this contract confirms the Company as a leading supplier and manufacturer of LED road and street lights to the Australian market and demonstrates the potential of the changeover to LED road lights in Australia which will significantly reduce power, maintenance costs and CO2 emissions over the coming years."

Should you require any further information please contact Mr. Con Liosatos.
