Strong interest in new FFT Aura Ai Platform with first orders received

- First orders received for Aura Ai valued at over A\$300K
- New technology used to protect high security government sites
- Aura Ai proposed for more than 15 separate security projects globally

Future Fibre Technologies Limited (FFT) (ASX: FFT), a global leader in fibre optic perimeter intrusion detection systems, has secured orders for its new generation Aura Ai Platform valued at over A\$300K.

FFT Aura Ai will be used to protect two high security government sites located in North America.

With FFT's advanced software detection and classification algorithms combined with cut resilient capabilities, FFT Chief Executive Rob Broomfield said that orders for Aura Ai were gaining momentum following the product's release at ISC West in Las Vegas last month.

"The response from customers and prospects to Aura Ai's enhanced capabilities has been very positive with Aura Ai already proposed for more than 15 separate security projects globally. Strong interest has been received from Europe and across the Americas for the protection of airports, utilities and government sites. We are also continuing to pursue new opportunities for Aura Ai in adjacent mining and traffic applications." Mr. Broomfield said.

About FFT

FFT is a leading developer and manufacturer of fibre optic intrusion detection security systems. Deployed by some of the most security conscious industrial, military and government organisations in the world, FFT's advanced security systems:

- detect and locate **perimeter** intrusions;
- identify third-party interference on oil and gas **pipelines**; and
- protect sensitive **data network** communications cables.

With hundreds of installations in more than 60 countries, FFT has established a solid reputation for delivering highly intelligent, reliable, and award winning intrusion detection solutions. <u>www.fftsecurity.com</u>
