

ASX ANNOUNCEMENT: June 1, 2017

NASDAQ on Hold Pending NASH Interim Analysis Results

- Interim NASH Clinical Trial Results expected during first week of July 2017
- Current NASDAQ Pricing offer not acceptable for shareholders
- Brokers advise pricing unattractive due to pending interim analysis inflection point

NASDAQ on Hold Pending NASH Interim Analysis Results

Melbourne, Australia, June 1, 2017: Australian biopharmaceutical Company, Immuron Limited (ASX: IMC), today announces that the Company has decided to place its NASDAQ listing efforts on hold for the time being pending release of the interim analysis results of the Company's Phase II NASH Clinical Trial anticipated to be released by the first week of July 2017.

Immuron Chairman Dr Roger Aston commented;

"The current pricing being offered by potential investors for our NASDAQ listing was just not acceptable to the Board and would have meant a heavy discount for all existing shareholders which the Board was not willing to accept. Our US brokers have advised us that the primary reason for the low pricing offers was due to the fact we're so close to a major inflection point with the pending release of our NASH clinical trial interim analysis.

We have made a significant time and cost investment in the NASDAQ process to get to this point, and we hope to be able to progress this through to a NASDAQ listing following the release of the NASH interim analysis by the end of the first week of July 2017."

ABOUT IMMURON:

Immuron Ltd (ASX: IMC) is a biopharmaceutical company focused on developing and commercialising oral immunotherapeutics for the treatment of many gut mediated diseases. Immuron has a unique and safe technology platform that enables a shorter development therapeutic cycle. The Company currently markets and sells Travelan® for the prevention of travellers' diarrhea whilst its lead product candidate IMM-124E is in Phase 2 clinical trials for NASH and ASH. These products together with the Company's other preclinical immunotherapy pipeline products targeting immune-related diseases currently under development, will meet a large unmet need in the market.
