FFT secures million-dollar contract to protect Middle East Seaport

- **Order for Middle East Seaport valued at over A\$1.6M**
- **Builds on recent contract wins in the transport sector**

Future Fibre Technologies Limited (FFT) (ASX: FFT), a global leader in fibre optic perimeter intrusion detection systems, has secured a new order valued at over A\$1.6M.

Multiple FFT Aura controllers will be used to protect the extensive perimeter of an international seaport located in the Middle East. In addition, FFT's Central Alarm Management System (CAMS), in a fully redundant configuration, will provide highly secure integration into the port's Physical Security Information Management system.

The majority of the contract is scheduled to be delivered in the first quarter of FY2018.

Commenting on the announcement, FFT Chief Executive Rob Broomfield said, *"With the construction of new seaports and expansion of existing facilities in the Middle East comes demand for advanced security solutions to protect these vast and often challenging sites. With FFT technology already protecting shipping ports in Europe and the Middle East, this new order builds on recent transport sector wins - including a previously announced international airport contract in the Middle East."*

- ENDS -

About FFT

FFT is a leading developer and manufacturer of fibre optic intrusion detection security systems. Deployed by some of the most security conscious industrial, military and government organisations in the world, FFT's advanced security systems:

- detect and locate **perimeter** intrusions;
- identify third-party interference on oil and gas **pipelines**; and
- protect sensitive **data network** communications cables.

With hundreds of installations in more than 60 countries, FFT has established a solid reputation for delivering highly intelligent, reliable, and award winning intrusion detection solutions. www.fftsecurity.com
