**Final approval for German Mining Licence acquisition****Highlights**

- Acquisition of three potash Mining Licences in Germany's South Harz region approved by Thuringen provincial government
- Approval satisfies final condition on transaction with German government agency Bodenverwertungs-und-verwaltungs GmbH
- Review of historic drilling and resource information on newly acquired licences progressing well

Davenport Resources (ASX: DAV) ("Davenport", "the Company") is pleased to announce it has secured the final approval required for the acquisition of three highly prospective potash Mining Licences in Germany's South Harz region from German government agency Bodenverwertungs-und-verwaltungs GmbH (BVVG).

The Thüringen State Mining Authority, which has jurisdiction over the area in which the Mining Licences are located, gave notice this week approving the transfer of title of the tenements to Davenport's German subsidiary company East Exploration GmbH.

The approval satisfied the remaining condition on the BVVG transaction, ensuring Davenport and consultant ERCOSPLAN can proceed with a review of historic exploration data from the licences that will be of great assistance in guiding cost-effective brownfields evaluation of the area.

Adjoining Davenport's existing Exploration Licences in the South Harz region, all three Mining Licences have been extensively drilled with historic resource estimates that date back to the GDR era when potash was actively mined in the South Harz region.

In total, more than 100 deep drill holes were sunk on the licences leading to the creation of an extensive exploration database that would cost in excess of €100 million to replicate based on current industry costs.

The review of historic exploration will cover all three new licences, the priority will be areas of Sylvinite mineralisation that extend into Davenport's adjacent Küllstedt and Gräfen-tonna licences.

Davenport anticipates that once the existing data has been analysed, carefully located confirmation drill holes can validate the entire 1970s drill program and bring it into a JORC 2012 resource.

Davenport Managing Director, Chris Bain said "Now that all formal approvals for the acquisition are complete, Davenport expects the first report on historic drilling within two weeks and more results to follow progressively over the next three months"
