COMPLETION OF MAIDEN AIRBORNE MAGNETIC AND EM SURVEY

HIGHLIGHTS

- Kopore's initial airborne magnetic and electromagnetic survey has been completed over the Ghanzi West GWD1 copper-silver domal prospect
- The airborne survey covered an area of 1,091.7km², covering an interpreted regional 'domal' structure which forms a primary base metals target in the Kalahari Copper Belt
- Final modelled data with potential prioritised targets, is expected in February 2018
- Kopore is seeking geophysical signatures comparable to other Kalahari deposits including the T3¹ and Eland Project² in Botswana

Kopore Metals Limited ("Kopore" or "Company") is pleased to announce the completion of its airborne magnetic and electromagnetic (EM) survey over its Botswana Ghanzi West GWD1 potential domal prospect, located on the Kalahari Copper Belt.

The geophysical survey was conducted by South African based NRG Exploration CC using a helicopter borne electromagnetic and magnetic survey (HTDEM) system. Survey lines were flown at 200 m line spacing, with potential depth penetration from near ground level to >300m below surface. Recent airborne geophysical surveys by other companies across the Kalahari Copper Belt have highlighted the potential success for delineating copper mineralisation utilising these techniques. Initial processing of the data has commenced on site with corrected data to undergo specialist modelling during January.

This program followed the completion of a ground geophysics and soil sampling survey that highlighted extensive potential sulphide conductors at the GW1 and GW2 prospects at Ghanzi West and GW3 and GWD2 at Senyetse, as announced on 4 December 2017.

The results of both campaigns will be combined to produce a list of ranked targets by potential prospectivity. The Company will provide these results and guidance for the 2018 exploration campaign in the coming month.

2. Cupric Canyon – 155Mt at 0.85% Cu (<https://www.cupriccanyon.com/development-exploration/exploration>)

Competent Persons Statement

The information in this announcement that relates to exploration results is based on information compiled by Mr David Catterall, a Competent Person and a member of a Recognised Professional Organisations (ROPO). David has been engaged by Kopore as a consultant Exploration Manager. David has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. David consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

- END -
