

## ASX Announcement

### Energy Efficient Lighting Upgrade to Melbourne Star

**11 October 2018, Melbourne Australia:**

Enevis Limited (ASX: ENE) (**Enevis**) is very pleased to announce that it has delivered the first stage of the energy efficient LED lighting upgrade to the iconic Melbourne Star Observation Wheel.

The upgrade of the Melbourne Star lighting control system and energy efficient LED lighting has been quite an exciting and complex challenge for Enevis.

The project has required the skillset of multiple design and delivery facets which Enevis has been able to achieve via its subsidiaries, SKS Technologies Pty Ltd (**SKS**) and Urban Lighting Group Pty Ltd (**ULG**).

The LED lighting has been specifically designed and manufactured by ULG, whilst SKS was responsible for the design and integration of the new lighting control system.

After successfully completing the initial upgrade stage, Enevis and its subsidiaries will provide ongoing support to Melbourne Star over the coming years.

The united and collaborative approach to the project in conjunction with the team at Melbourne Star has enabled the engineering and design of such a complex system to be achieved.

Mr. Yoshio Nagamatsu, Managing Director of Melbourne Star commented: *"We needed to ensure we selected a partner who could provide an energy-efficient solution and ensure our iconic LED Lightshow continues to shine brightly over Melbourne for many years to come. After many months of research, we were delighted to appoint SKS Technologies to manage the project. Since opening early 2014, over 1.5 million visitors have experienced Melbourne Star. Our nightly LED Lightshow is one of the Star's most famous features, so it was crucial that the upgrade was managed and delivered in line with our goals".*

Enevis Limited Executive Chairman, Mr Peter Jinks commented: *"It has been a privilege for Enevis and its subsidiary divisions to be involved with upgrading this iconic Melbourne landmark. Delivery of this project involved cross divisional technical resources and skill sets which is a key strength and point of uniqueness of the groups business model. We look forward to working with Mr. Yoshio Nagamatsu and his team over the coming years".*
