COVATA ANNOUNCES TWO WORLD CLASS PRODUCT RELEASES

Sydney, Australia: Covata has today announced details of two world class product releases.

Blockchain for Data Protection

Covata has, through its partnership with ByzGen Limited (UK), leveraged the unique capabilities of Skipchain technology to add blockchain capability to its secure collaboration product SafeShare, which is in use today by more than 27 Government agencies. This technology will make the data history immutable and enable the blockchain to be the point of trust for access control to that data (including the specific permission levels for a user), ensuring the data you are seeing and securely sharing has not been tampered with.

This application has use cases such as securing eDiscovery outputs, analytical reports and source documents for investigations and litigation, as well as government use cases relating to security vetting and credentials. An early adopter version is available immediately for trial.

Covata Enterprise Security Console

Covata has developed a unique Enterprise Security Console that provides CEOs, business owners and IT administrators with a single pane of glass to discover and understand where sensitive data is stored and whether it is appropriately secured. This knowledge allows the user to classify, protect and control that data. This product incorporates the Covata Security Index that rates your security readiness. Trials will start shortly with partner customers.

The Console is intended to satisfy uses cases where an organisation wishes to assess the degree to which it is ready to meet its internal Data Security Policies or Framework and also compliance, for example under European GDPR requirements.

Separately, Covata has also extended the controls available in its Eclipse product to cover protection of email and attachments in **Microsoft Exchange & Exchange365**. The solution builds upon Microsoft Azure Information Protection and adds to the existing coverage across File servers, SharePoint/ SharePoint online and OneDrive. A beta version will be completed in October with a production version available later this Quarter.

Covata Chief Commercial Officer, Derek Brown said, "Covata is pleased to announce these exciting developments, which provide us with key differentiators in the market and will open doors to new customers and partners."
